INDUSTRY DIVISION

Milton Eisen, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1972 Census of Manufactures. Primary direction of the program was performed by Shirley Kallek, Associate Director for Economic Fields, and Melvin A. Hendry, Assistant Director for Economic and Agriculture Censuses.

This report was prepared under the direction of Elmer S. Biles, Chief, Industry Division (until February 1975), and Milton Eisen, his successor. Arthur W. Horowitz, assisted by John S. Berube, was responsible for the overall management of the census and was the Industry Division's liaison officer with other divisions.

Program responsibility was shared by the following individuals, who participated importantly in the entire program: Kenneth I. Hansen and Dale W. Gordon, Census Durables; Michael Zampogna, Census Non-durables; Ruth Runyan, Census Subject and Special Reports; Malcolm E. Bernhardt, Current Durables; Robert J. Nealon, Current Non-durables; and John P. McNamee, Minerals. The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowledgment statements in the 81 individually published industry reports.

Edward A. Robinson made significant contributions to the basic economic concepts and content of the census. The mathematical techniques used in editing the data and sampling the respondents were developed by Donald F. Clark. Robert E. Crowther was responsible for the annual survey component of the census of manufactures. Computer programs were prepared under the direction of Howard Hamilton, assisted by Mary H. Johnson.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of Roger Bugenhagen, Chief. Assistance was provided by Samuel Schweid, Andrew Grieco, Charles Venters, Shirley Roberts, Robert Viehman, Jerry McDonald, Joel Richardson, and Sandra Katis.

Forms design was performed in the Administrative Services Division, Henry J. Husmann, Chief. Gladys Potts, Joyce Teague, Helen Hindt, and Margaret Swinton made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of O. Bryant Benton, Chief, who was assisted by Don L. Adams and Robert L. Allen.

The geographic coding procedures were developed in the Geography Division under the direction of Jacob Silver, Chief, assisted by Zigmund Decker, Terence McDowell, Silla Tomasi, Robert Hamill, David Christy, Kurt LeGait, and John Hawkins. Computer processing was directed by James R. Pepal, Chief, Computer Services Division. C. Thomas DiNenna, Jesse Verdeja, and Willie E. Clark provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the subject and industry report series MC72(1)-1 and MC72(2).

The review and issuance of the final industry and State publications were done on a flow basis. Errors were uncovered for a limited number of data cells after the final publications were issued. Because of the expense involved, corrections were made to the previously published data only if they resulted in a revision of 3 percent or more for an individual industry or 1 percent or more for a State. These corrections are included in the final volumes.

All errors identified in any phase of the review were carried to the computer file used to produce the final subject and special reports. Therefore, those reports represent the most accurate data available.

I. GENERAL BACKGROUND

1. THE ECONOMIC CENSUSES

General.—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. This program includes censuses of manufactures, retail trade, wholesale trade, selected services industries, mineral industries, construction industries, and transportation. In 1972, these censuses accounted for nearly 77 percent of the \$785 billion of national income originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; electric, gas, and sanitary services; and health and medical services, except for laboratories operating on a profit basis.

Uses and Users of Census Data.—The economic censuses are the primary source of facts about the structure and functioning of the economy and therefore provide information essential both for government and business. They furnish an important part of the framework for such composite measures as the national accounts. The census measures also provide weights and serve as benchmarks for current surveys of industrial activity and for indexes of industrial production, productivity, and price, all of which are essential in developing the general background for understanding particular economic situations.

There is widespread use of the economic censuses by manufacturers and distributors who need to establish measures of

their potential markets in terms of areas, kinds of business, and kinds of products; and by managers in various industries and trades who need facts for purposes of economic or sales forecasting, for analysis of sales performance, for the layout of sales territories, for the allocation of advertising budgets, and for the location of plants, warehouses, and stores. For these business purposes, census facts are invaluable. Likewise, trade and professional associations need census information to learn how their industry is changing; chambers of commerce and State and local governments need to understand the business structure and changes occurring in their areas. Business magazines and academic researchers rely on census facts as background for many of their articles.

Following every census, reports are purchased by thousands of business and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press; and census volumes are available in all the major public and college libraries.

History.—The first statistical survey which can be called an economic census covered the year 1809, when inquiries on manufacturing were included with the 1810 census of population. Although the results of this pioneer effort were unsatisfactory by modern standards,¹ continued interest in measure-

¹ For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, "The Censuses of Manufactures 1810-1890." National Archives Publication No. 63-22, June 1963. Government Printing Office.

INTRODUCTION—Continued

ment of the Nation's economic progress led to successive improvements during the 19th century. By 1890, the statistical standards and procedures followed in conducting the censuses were of a fully professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were

collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction; selected service trades were covered beginning with 1933. Dates of these and other economic censuses from 1809 are shown in table A.

Enterprise Statistics.—The coordinated collection and tabulation of comparable data for several sectors beginning with 1954 has permitted the Census Bureau to develop its enter-

INTRODUCTION—Continued

prise statistics program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Also, through the enterprise statistics program, it has become possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

Legal Provisions.—Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes

the use of sampling techniques in conducting censuses. As amended in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1977. The pertinent portions of Title 13 are quoted in appendix D.

2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

General.—In terms of the major industry divisions established in the national accounts, manufacturing is the largest sector of the economy. In 1972, manufacturing plants employed 19 million persons, 22 percent of the civilian labor force of 86.5 million. Over the past 20 years, as shown in table B, national

INTRODUCTION—Continued

income originating in manufacturing averages almost 30 percent of the total. In 1972, government and government enterprises surpassed wholesale and retail trade which historically was the next largest sector.

Cyclical Changes.—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole, as can be seen in the movement from 1929 to 1933 to 1939 in table C.

Within manufacturing, durable goods industries accounted for about 60 percent of all manufactures during recent periods. This category tends to be more volatile than nondurable goods, generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing amounted to only about one-third of the total.

Geographic Distribution.—In the early and middle 19th century, manufacturing activity was concentrated in the

INTRODUCTION—Continued

Northeast. Over the past hundred and twenty years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States. Industry expanded into the North Central Region in the latter part of the 19th century and, in more recent years, displayed a marked growth in the South and West.

Size Distribution.—Manufacturing activity tends to be characterized by relative large-scale operations. While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1972 census had less than 10 employees and they accounted for less than 3 percent of the total value added by manufacture.

3. ROLE OF THE CENSUS OF MANUFACTURES

In the farm-oriented economy of the early 19th century, industrial statistics played a relatively small role in government policy formation. A few series on physical output of commodities originated either from private sources (flour, iron, and steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). Other than these, the only sources of information on the manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased, and the user finds a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment, payrolls, hours worked, production, prices, inventories, orders, investment in structures, machinery, and equipment, and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and on a timely basis. Sophisticated indicators of economic progress have also been developed such as price and production indexes, gross national product, and national income, published at monthly or quarterly intervals.

In this setting, the census of manufactures still plays an essential role since no other source provides such comprehensive and detailed information on the structure of the industrial sector.

The census obtains, for every manufacturing plant with one employee or more, data on its input of labor, materials, and capital, its output of products and services, its location, and the legal form of organization of the owning firm.² These facts are obtained in sufficient detail to permit classification by industry, by size of plant, by homogeneity of output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

² For 1967 and 1972, some of this information for 120,000 small companies was not obtained directly but estimated from administrative records. See the discussion of coverage of establishments in sections 4 and 6 below.

TABLE D. Employment in Manufacturing Establishments, by Region: 1849 to 1972

| Year | United States | Northeast | North Central | South | West |
|---------------------------------|---------------|-----------|---------------|-------|-------|
| Number of employees (thousands) | | | | | |
| 1972 | 19,029 | 5,306 | 6,135 | 5,221 | 2,367 |
| 1967 | 18,492 | 5,573 | 6,059 | 4,553 | 2,305 |
| 1963 | 16,235 | 5,190 | 5,239 | 3,780 | 2,025 |
| 1958 | 15,423 | 5,242 | 5,017 | 3,382 | 1,779 |
| 1947 | 14,294 | 5,429 | 5,109 | 2,710 | 1,054 |
| 1939 | 9,527 | 3,879 | 3,184 | 1,852 | 612 |
| 1929 | 10,198 | 4,246 | 3,516 | 1,758 | 675 |
| 1899 | 5,077 | 2,629 | 1,474 | 793 | 181 |
| 1849 | 957 | 696 | 110 | 146 | 4 |
| Percent of U.S. total | | | | | |
| 1972 | 100 | 28 | 32 | 27 | 13 |
| 1967 | 100 | 30 | 33 | 25 | 12 |
| 1963 | 100 | 32 | 32 | 23 | 13 |
| 1958 | 100 | 34 | 33 | 22 | 12 |
| 1947 | 100 | 38 | 36 | 19 | 7 |
| 1939 | 100 | 41 | 34 | 20 | 6 |
| 1929 | 100 | 42 | 35 | 17 | 7 |
| 1899 | 100 | 52 | 29 | 16 | 4 |
| 1849 | 100 | 73 | 12 | 15 | — |

Note: Detail may not add to totals because of independent rounding. 1849 data include hand and neighborhood industries, which were excluded from the censuses of manufactures beginning with 1899.

TABLE E. Number of Manufacturing Establishments and Value Added by Manufacture, by Size Class of Establishment: 1972

| (Cumulative percentage) | | |
|---------------------------------|--------------------------|----------------------------|
| Size class | Number of establishments | Value added by manufacture |
| All establishments, total | 100.0 | 100.0 |
| 1 to 4 employees | 35.9 | 1.1 |
| 1 to 9 employees | 50.8 | 2.5 |
| 1 to 19 employees | 64.8 | 5.4 |
| 1 to 49 employees | 77.6 | 12.6 |
| 1 to 99 employees | 89.0 | 20.9 |
| 1 to 249 employees | 95.6 | 36.9 |
| 1 to 499 employees | 98.2 | 51.4 |
| 1 to 999 employees | 99.3 | 65.1 |
| 1 to 2,499 employees | 99.8 | 79.3 |

INTRODUCTION—Continued

General statistics (that is, total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures are published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual-city level provided there are at least 450 employees in manufacturing and the information can be published without compromising the confidentiality of individual company data. Since a significant amount of industry detail cannot be published for the 3,140 counties and county equivalents in the United States, a special computer tape on "Location of Manufacturing Plants" is available for data users. This tape includes the number of establishments in each of the 450 industries by county or county equivalent area, by employment size. Information such as this constitutes a periodic inventory of the geographic dispersion of the Nation's manufacturing economy that provides a benchmark for measuring the change in its structure.

The census of manufactures also provides benchmarks from which more frequent surveys can be developed on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an Annual Survey of Manufactures (ASM) on a sample basis during the intervening years. After each 5-year census, a new sample is drawn utilizing the characteristics recorded for each company in the census. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains less detailed information on products, materials consumption, and equipment.³

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other indicators of economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the

input-output studies of the Bureau of Economic Analysis. The information derived from the census of manufactures is also used to develop indexes of industrial production for census years. These indexes are used as benchmarks for the monthly Federal Reserve Board Index of Industrial Production—a key indicator of current economic activity. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Census Bureau, other government agencies, and by manufacturers' associations.

4. INDUSTRY AND PRODUCT CLASSIFICATION

Structure of the Standard Industrial Classification.—The basic classification system employed in the economic censuses is the Standard Industrial Classification (SIC). The SIC was developed for use in the classification of establishments (see "Establishment Basis of Reporting," page 9) by type of activity in which engaged. It covers the entire field of economic activities, subdivided as follows:

| Industrial division | Title | Major groups |
|---------------------|---|--------------|
| A | Agriculture, forestry, and fisheries | 01-09 |
| B | Mining | 10-14 |
| C | Contract construction | 15-17 |
| D | Manufacturing | 20-39 |
| E | Transportation, communication, electric, gas, and sanitary services | 40-49 |
| F | Wholesale and retail trade | 50-59 |
| G | Finance, insurance, and real estate | 60-67 |
| H | Services | 70-89 |
| I | Public administration | 91-97 |
| J | Nonclassifiable establishments | 99 |

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

Division D.—Manufacturing

Major Group 20 Food and kindred products
Industry group 202 Dairy products
Industry 2023 Condensed and evaporated milk

The SIC is the responsibility of an intragovernmental technical committee headed by the Office of Management and Budget. The system is used by all Federal Government agencies engaged in the classification of establishments. To

³ Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 450 industries. However, at the State and SMSA levels, statistics are published only for 3-digit and 2-digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,140 counties and equivalent areas. These 300-odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. Data for cities are shown for those cities having over 20,000 manufacturing employees.

facilitate comparison with Federal statistics and the filing of reports, many State and local governments and business concerns organize their own records along SIC lines.

The first SIC manual was issued in 1939. For the manufacturing sector, the nucleus of the manual was the census of manufactures industry classifications developed over a period of many years. A revised manual was issued for the manufacturing industries in 1945 which, with minor modifications, was used in the 1947 census of manufactures. For the 1954 census, the classification structure used in 1947 was again employed, with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and the historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. Minor revisions of the SIC between 1958 and 1967 introduced some 4-digit industry changes but none of them crossed 3-digit group lines. Another extensive revision of the SIC was completed in 1972 which also affected the comparability of industry data. The discussion of the revisions and the impact on comparability appears in appendix B, as well as in parts of each individual industry chapter.

Structure of the SIC Manufacturing Division.—For the manufacturing division, the 20 2-digit SIC Major Groups (20 to 39) are subdivided into 143 3-digit SIC Groups (201 to 399) and into 451 4-digit industries (2011 to 3999). While the SIC contains 451 industries, the Bureau of the Census has combined one small industry with another for a total of 450 industries.

Most of the 451 manufacturing industries are defined in terms of specific groups of related products. Usually the products are made of similar materials and by similar processes and are competitive. In determining the boundaries of product-defined industries,⁴ it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. (Example: Industry 3361, Aluminum Foundries (castings). A small number of industries are basically defined by material used as well as final product of the plant. (Example: Industry 2521, Wood Office Furniture).

⁴ Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (that is, secondary products), and (c) use similar materials or processes. While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; that is, for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries.⁵

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line" of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2- and 3-digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4-digit industries are susceptible to allocation to such categories, while the 2-digit SIC groups are not.

Subindustries.—To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4-digit SIC industries into "subindustries." This device is employed where there are wide disparities in the

⁵ See "Industry Classification and Sector Measures of Industrial Production" by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and "Historical Comparability of Census of Manufactures Industries, 1929-1958" by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

operating ratios of the plants in the industry because of differences among plants in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 61 manufacturing industries for editing purposes and many were regarded as significant enough to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multioutlet bakeries, and many apparel industries (Group 23) are subclassified into manufactures, contractors, and jobbers.

To provide a further measurement of variations within 4-digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization which is published in table 5A of the industry chapters.

Definition of Manufacturing.—As defined in the SIC, manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (for example, baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

Auxiliary Units.—In addition to the production of goods and manufacturing services, manufacturing plants engaged in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary

activities associated with the operation of the establishment as a manufacturing entity (for example, management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like). Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for central administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, Form NC-X6, in section 7, below.)

Marginal Activities.—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, egg hatching, cotton ginning, and similar activities closely associated with agriculture are excluded.

(b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.

(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.

(d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.

(e) Production of coke for own use by establishments owned by public utility companies.

In the 1972 census, no attempt was made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,⁶ ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

⁶ Separate data for retail bakeries with baking on the premises were included in the retail census publications, however.

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the 1972 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

Establishment Basis of Reporting.—The SIC is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large (for example, with more than 100 employees in each line of activity) and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have

responded favorably, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in company records to provide establishment-type reporting.

SIC industry definition takes account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulp-mills operated in combination with papermills are included in one report.

Coverage of Establishments.—The censuses of manufactures for 1947 to date have included establishments with one employee or more. Beginning with the 1967 census, reports were not obtained directly from all such establishments. Approximately 120,000 small single-unit manufacturing firms⁷ identified as having less than 10 employees were excused from filing reports. Under special arrangements which safeguarded the confidentiality of both tax and census records, limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Census Bureau for use in the 1967 and 1972 economic censuses. Estimates for data other than payrolls and sales for these small establishments were constructed from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, they account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

In the censuses of 1921 through 1939, establishments with less than \$5,000 value of products were excluded. For 1899 to 1919, the limit was \$500. The change in the minimum size limit to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.⁸

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products and printing and

⁷ The characteristics of these firms are discussed below in section 15.

⁸ This point is discussed at greater length in the Introduction to the 1947 volumes.

publishing. Tabulation of IRS data for 1972 indicates that there were 104,000 tax returns completed as manufacturing that had no payrolls under SSA standards. These accounted for a little over one-quarter of 1 percent of the total value of shipments for all manufacturing industries.

As indicated above, report forms were not mailed to 120,000 very small establishments. These establishments were assigned the industry classifications to which they had been coded in the 1967⁹ Census of Manufactures if they had been in business for that year, or if they had begun in business after 1967 they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the total number of establishments.

Primary and Secondary Products.—As applied in the economic censuses, the SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 20 very broad 2-digit groups, 143 3-digit groups, and 451 4-digit industries. In addition, the Census Bureau has developed a product coding system based on the SIC, which contains 1,293 5-digit product classes and approximately 10,500 individual 7-digit products. (See "The Classification of Products and Materials" below.) The 7-digit products and 5-digit product classes are considered the primary products of the industry with the first four digits the same as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, pay-

rolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in tables 5A and 6B of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5B and 5C should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from tables 5B and 5C. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Degrees of Integration.—In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, those establishments may be included which are vertically integrated and those which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

⁹ Establishments which were in the 1967 Administrative Record File would have been assigned industry codes from the 1963 Census of Manufactures.

Industry Code Resistance.—The production of many establishments is so evenly divided among two or more industry-determining product groups that the predominant groups (which can represent less than half of the total value if there are three or more groups) change from year to year. In the ASM, these plants are prevented from shifting back and forth among industries due to minor shifts in product mix, by the application of a "resistance formula" in assigning industry classifications.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures and again applied in the 1967 census. In the 1972 census, the formula was applied only to establishments included in the 1971 ASM sample panel with certainty (that is, included with a probability of "1"). In general, certainty cases included all establishments of companies with at least one manufacturing plant with 250 employees or more.

The formula gives approximately equal weight to the need for maintaining continuity in the establishment composition of an industry, thus improving the measurement of change and the need for reflecting the industry's exact status at a point in time.

In the 1972 census, the industry classification of certainty establishments was allowed to change from that assigned in 1971 under one of the following conditions:

- (a) The value of the 1972 primary products constituted 60 percent or more of its total value of product shipments, or
- (b) The value of the 1972 primary products, while less than 60 percent, was at least twice the value of products which had been primary in 1971.
- (c) The value of 1972 primary products, while not meeting either of the two prior conditions, exceeded the value of the 1970 primary industry's products in both 1972 and 1971 by at least 20 percent.

The Classification of Products and Materials.—In census industrial statistics, a commodity classification system based on the SIC is employed. The code numbers used in this system relate the commodity to the industry in which it is produced. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The system is also applied to the coding of materials insofar as the first four digits are concerned; for example, the code number 024111 refers to whole milk used as a material, and the first four digits of this code number 0241, refer to the agricultural industry, dairy farms, where this product originates.

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Census Bureau's entire industrial statistics program, including monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.¹⁰

5. GEOGRAPHIC CLASSIFICATION

Census Divisions and Regions.—In order to present census data at a level intermediate between the U.S. total and those for the individual 50 States and the District of Columbia, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 census, the nine divisions were also classified into four geographic regions: Northeast, South, North Central, and West.

Not only are these groupings convenient for the summary presentation of census data below the U.S. level, but they are also essential to presenting a maximum of geographic information where the individual State data cannot be shown without disclosing figures for individual companies. (See section 22, "Confidentiality".) The relative importance of manufacturing among the regions, divisions, and States is shown in table F.

Standard Metropolitan Statistical Areas.—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 263 standard metropolitan statistical areas (SMSA).¹¹ In the 1972 tables, detail for 2-, 3-, and 4-digit industries is shown for any SMSA when it would not disclose data for individual companies and the industry had at least 250 manufacturing employees. This is the same procedure as that used in the 1967 census. Prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment, and only industry group figures were

¹⁰ Schedule B is the U.S. export classification while TSUSA is applied to imports.

¹¹ See appendix F for a description of each SMSA.

—Represents zero.

shown for SMSA's with 40,000 to 190,000 employees. Between 1967 and 1972, a significant number of SMSA's were redefined in content or became new SMSA's. These changes are discussed in appendix E.

Standard metropolitan statistical areas are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of the area. Each area (except in New England) consists of one whole county or more. An area may contain not only highly industrialized

counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining standard metropolitan statistical areas, but on a city and town basis because towns are regarded as the significant unit in this region of the country.

| Cincinnati, OH-KY-IN | 157.6 | 3,561.2 | 17 | 17 | 15 | Memphis, IN-AR-MS | 64.2 | 1,352.4 | 42 | — | — |
| Baltimore, MD | 180.1 | 3,476.2 | 18 | 15 | 12 | Albany-Schenectady-Troy, NY | 66.9 | 1,322.0 | 43 | 49 | 46 |
| Buffalo, NY | 151.7 | 3,146.3 | 19 | 18 | 14 | Miami, FL | 86.0 | 1,219.0 | 44 | — | — |
| Louisville, KY-IN | 113.4 | 3,022.8 | 20 | 20 | 22 | Syracuse, NY | 60.5 | 1,205.3 | 45 | 46 | 43 |
| Kansas City, MO-KS | 118.8 | 2,902.4 | 21 | 21 | 23 | Paterson-Clifton-Passaic, NJ | 75.5 | 1,179.4 | 46 | 19 | 16 |
| San Jose, CA | 134.4 | 2,873.1 | 22 | 25 | 29 | Springfield-Chicopee-Holyoke, CT | 62.1 | 1,157.7 | 47 | 45 | 47 |
| Anaheim-Santa Ana-Garden Grove, CA | 131.0 | 2,734.4 | 23 | 23 | 27 | Canton, OH | 57.6 | 1,151.6 | 48 | 48 | 48 |
| Greensboro-Winston-Salem-High Point, NC ... | 138.0 | 2,593.4 | 24 | 31 | — | Bridgeport, CT | 63.7 | 1,137.6 | 49 | 40 | 41 |
| Indianapolis, IN | 122.5 | 2,525.3 | 25 | 26 | 25 | Birmingham, AL | 68.9 | 1,123.8 | 50 | 47 | 39 |

Note: The Flint, Mich., SMSA falls within the top 50 SMSA's but is excluded from this table to avoid disclosing figures for individual companies.

— Represents zero. *The definition of this SMSA changed for 1972. See appendix F for a description of each SMSA and changes in content.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined

would be limited by the fact that many types of economic and social data are available only on a county basis.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Value added by manufacture in all SMSA's accounted for 78 percent of the U.S. total in 1972. The relative importance

of the 50 largest SMSA's in 1972 and their rankings in the 1967 and 1963 censuses are shown in table G.

Industrial Counties.—In addition to industry statistics for standard metropolitan statistical areas, table 7 of each State report, presents data by county for each industry group (2- and 3-digit) that had at least 450 manufacturing employees

and where it would not result in disclosure of figures reported by individual companies.

Cities with 450 Manufacturing Employees or More.—Summary totals and industry detail at the 2-digit level are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

II. METHODS

6. PLANNING AND PREPARATION

General.—The Census Bureau has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations is solicited in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, studies of the problems encountered in the previous censuses are undertaken, and proposals to improve the methods of collection, processing, and tabulation are explored.

Mailing Lists.—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from Internal Revenue Service (IRS) and Social Security Administration (SSA) records.¹² These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, it was decided to investigate the feasibility of making greater use of the data in the IRS-SSA records. This effort led, in the 1967 censuses, to the exemption of over 2,000,000 firms from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. Well in advance of the data collection phase of the censuses, plans for using these records for small employers were developed in close cooperation with those agencies. Specific procedures for this use and for assuring confidential treatment of individual tax returns were set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The basic records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The information obtained from these reports was the name and address, payrolls, and gross business receipts. In addition, an SIC indus-

trial activity code was assigned by use of the permanent SSA records which indicate the industry or kind of business of each employer. Other census statistics for these small firms were imputed, using industry average ratios to payrolls and sales.¹³

Since the 1967 procedure was successful, it was repeated in the 1972 economic censuses. In 1972, there was a concerted effort by the Census Bureau to improve the industry coding of the administrative record by mailing a nature-of-business inquiry to establishments whose industry codes could have been affected by the 1972 revision to the SIC. (A sample classification card is reproduced in appendix C.)

Planning the Content of Questionnaires.—As in previous censuses, the content of the 1972 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the basic data and those who use the resulting statistics. Those consulted included government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all national manufacturers' associations covering specific industries.

A special effort was made to obtain the advice of individual manufacturers and their trade associations as to the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1972 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These inquiries followed the pattern of the 1967 census inquiries, with the introduction of new product detail reflecting suggestions received by the Census Bureau after the 1967 canvass. Small items (those valued at \$5 million or less) were not retained in the list unless they were needed to simplify the classification of other products or were of strategic importance. The manufacturers and others consulted in this clearance procedure were requested to comment particularly as to whether

¹² The 1947 Census of Manufactures list was also obtained from the SSA.

¹³ As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

the proposed detail was readily reportable from business records, and whether it represented the most appropriate set of items for the industry. A restriction was placed on proposals for additional detail; it was stipulated that the 1972 value of any new product category should exceed \$20 million.

The thousands of comments and suggestions received in this clearance procedure were analyzed by the census staff. Finally, a detailed account of the review procedure and the decisions reached was forwarded to the Office of Statistical Standards, Office of Management and Budget, along with the Census Bureau's recommendations for the content of the product sections.

The final review of the content was performed by the Office of Statistical Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives representing a cross section of industries and various professions within companies such as controllers, economists, and market research directors.

7. REPORTING FORMS

A representative selection of the reporting forms used in the census is reproduced in appendix C. The uses of each of them are discussed below.

General Forms.—This group of forms was used in the economic censuses generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

NC-X1A, Report of Company Organization.—This companywide report and its companion forms NC-X1B and NC-X1C were used in the precensus of multiunit companies conducted in 1972. A more detailed account of their use is given in section 8, "The Mailing Lists."

NC-X2, Listing of Additional Establishments.—This form was mailed to all multiestablishment companies together with the 1972 Census of Manufactures forms to obtain a list of establishments that were acquired after the NC-X1A was filed. These plants were then classified, added to form NC-X1A, and mailed report forms. Plants under construction were requested to report expenditures put in place during 1972 and the total gross book value of assets at the end of the year.

NC-X3, General Schedule.—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.¹⁴

¹⁴ The use of Form NC-X3 is also discussed in section 8, "The Mailing Lists."

NC-X6, Central Administrative Offices or Auxiliary Establishments.—Many multiunit companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. These establishments were asked to complete form NC-X6. The form contained questions on approximate employment for such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments.

NC-K1, Company Summary Report.—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, along with the appropriate questionnaires for its establishments. The NC-K1 requested consolidated company totals for key data items, such as receipts, new capital expenditures, inventories, and fixed assets. In addition, each company was asked to distribute the 1972 employment reported on its establishment questionnaires by its IRS-SSA employer identification numbers (EI numbers) and to compare these totals to the figures reported on its Treasury Form 941 tax returns. This comparison provided assurance that all domestic establishments of each large multiunit firm and its subsidiaries would be included in the censuses. Form NC-K1 served this operational purpose and also provided essential data for the enterprise statistics program described above in section 1.

Census of Manufactures Forms.—The questionnaire reproduced in the appendix, form MC-36B, is typical of the 180 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. For establishments included in the Annual Survey of Manufactures sample, form MA-100 was substituted for the front sheet of form MC-36B and its companion forms, since the content was virtually the same and it was desired to maintain continuity of reporting in the ASM. Whether or not form MA-100 was used, the inquiries on the 180 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

Annual Survey of Manufactures Forms.—Form MA-100 is the establishment report used in the ASM since 1949 (with modifications). As mentioned above, this form was used in 1972 as the first sheet of the census of manufactures report for the establishments included in the ASM sample. The establishment's 1971 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 9, "Quantity and value of products shipped and other receipts," on form MA-100 corresponds to item 18 on the census form MC-36B and its companion forms,

the difference being that item 18 called for more detailed information on product shipments.

Other Related Forms.—Form CB-51J, "Manufacturers' Sales Branches and Sales Offices," which is reproduced in appendix C, is typical of the several forms used for these establishments in the census of business. The forms differed only in the kinds of products sold as listed in item 12. In item 5, line b provided verification of the classification of the establishment as a sales branch or sales office. If the line-b percentage indicated that more than half of the goods sold were not manufactured by the parent company, the establishment was reclassified into one of the merchant wholesaler categories.

MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions.—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, man-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data were requested. The data are presented in a special report included in Volume I and are not included in the totals for operating manufacturing establishments.

8. THE MAILING LISTS

General.—As discussed in section 6 above, the basic lists for 1972 were obtained from IRS-SSA records, supplemented importantly by the inclusion of the ASM list of 68,000 establishments. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,¹⁵ it was necessary to follow separate procedures for multiunit companies (those operating at more than one location).

The Precanvass.—Multiunit companies were required to file at least one establishment report¹⁶ covering each location. In order to select the appropriate questionnaires, it was necessary

to determine in advance the nature of operations at each location. Beginning early in 1972, therefore, a "Report of Company Organization" (forms NC-X1A, NC-X1B, and NC-X1C)¹⁷ was obtained from firms known to be multiunits from previous census records. Form NC-X1A was mailed to all of the larger multiunit companies. Form NC-X1B was mailed to multiunit companies operating under 4 or less employer-identification numbers and having 13 or less operating establishments. Form NC-X1C was mailed to multiunit companies which were operating under one employer-identification number, having 4 or less operating establishments and a total employment of 100 or less.

All of these forms consisted essentially of a report on company affiliation and a list of the domestic establishments operated by the company. Before the forms were mailed, the company's establishments as identified in census records were prelisted. In the instructions for form NC-X1A, the respondents were asked to make any necessary corrections to this list. In addition, they were asked to supply descriptions of any new establishments not already listed, including their approximate size.

Large multiunit companies were segregated for special handling in the prec canvass because problems involving overlap and duplication were anticipated. Many of these companies were active in retail and wholesale trade as well as in manufacturing. The instructions for the prec canvass were reviewed with these firms in personal discussions with officials of their accounting departments, in order to make certain that the procedure was understood and the establishments properly described on form NC-X1A.

Initial Control File.—This file, consisting of about 10 million names and addresses of companies, was assembled from IRS-SSA records and other sources including the 1972 economic census records. For manufacturing, the ASM records were incorporated in the file.

Single-Unit Companies.—The mailing lists for single-unit companies (those operating at only one location) were developed from the initial control file by removing out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the prec canvass. A special survey of out-of-scope companies with more than 50 employees in selected industries was conducted to doublecheck their eligibility, and some names were added to the mailing list as a result. Single units with over 150 employees were mailed form NC-X1B to determine if they were multiunits.

The final step was to set aside the records of the small companies for which census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

¹⁷ These forms are reproduced in appendix C.

¹⁵ The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Census Bureau concept of a company differs from the IRS-SSA definition, since the Census company includes all establishments under common ownership or control; in the IRS-SSA records, subsidiary corporations are often treated as independent companies.

¹⁶ If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4, above.)

Classification cards (a sample form is reproduced in appendix C) were mailed to the administrative record cases if their historical code was involved in the 1972 SIC revision. Each establishment was requested to describe on the questionnaire the products manufactured or activity performed at their plant, the establishment was then classified according the response received. If a response was not received, the establishment was reclassified to the most probable industry.

General Schedule.—While the lists assembled in these ways were generally adequate in providing sufficient industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, "General Schedule," which is reproduced in appendix C, was mailed to all such companies. Since it was assumed that these companies were quite small, only a few key figures were requested. On the basis of the information reported, these reports were coded and included in the basic tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

9. GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by standard metropolitan statistical areas, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address, city, town or village, county, and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

The geographic coding system used in the 1972 economic censuses was based on the 1967 system with some improvements and revisions. The major changes included updating and

expanding the address reference file and the use of new techniques in coding and unscrambling addresses against the reference file.

10. DATA COLLECTION

General.—Although the greater use of administrative records in 1972 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 192,000 manufacturers. The assembly of several hundred different questionnaires into mailing packages, correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

Instructions.—Several general instruction booklets were prepared to assist respondents in completing questionnaires for the 1972 economic censuses. In addition, separate detailed instruction manuals were printed for establishments in a few kinds of business and in certain mineral industries with peculiar reporting problems, as well as for manufacturing establishments reporting on the detailed standard forms.

Timing.—The bulk of the 1972 questionnaires was mailed by mid-January 1973 with a due date of February 15, about 2 months earlier than the corresponding due date for the 1967 censuses. The collection phase was completed in late July 1973, which was about 3 months earlier than the 1967 census.

Followup.—Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. A reminder card was used for the first followup, and form letters were used in the four subsequent mailings. Two basic letter formats were used: one for multiunit companies that had returned questionnaires for some but not all establishments and the other for companies that had not responded at all.

In addition to the letters for the 3d, 4th and 5th followups, analysts made telephone calls to the large companies to help with reporting problems and to request that the forms be completed and returned.

The last followup letter was mailed in June 1973. Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in July 1973. Thus, all companies and establishments included in the original mailing list (except those determined to be inactive during 1972) were represented in the final statistical results, either by actual returns or by proxy returns generated from administrative records. A special effort was made to obtain actual returns from all large firms, so that the volume of business represented by proxy returns was relatively very small.

11. DATA PROCESSING

General.—The editing,¹⁸ coding, and tabulation of data for the five million establishments represented in the 1972 economic censuses was a complicated task requiring extensive advance planning and careful coordination among the Census Bureau's organization subdivisions. Automatic data processing and other advanced techniques were used in all phases to a considerable extent.

Facilities.—In the mail collection phase, the questionnaires were returned by respondents to the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The Jeffersonville functions consisted mainly of preliminary screening of questionnaires, carrying on routine correspondence with respondents, keying data on a key-to-disk system, and transmitting the tape encoded data to Washington on a high-speed transmission system. The Washington staff handled computer operations and all operations in connection with the use of IRS and SSA records.

Preliminary Screening.—After they were checked in against control lists and assigned geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. In the case of multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals reported on form NC-K1, "Company Summary Report." Questionnaires received from ostensibly single-unit firms were reviewed to ascertain whether they had become multiunits through merger or acquisition. All questionnaires were reviewed to see that the entries were legible and keyable and that entries appeared for a number of key items. For manufacturing establishments returns, the key items were payrolls and value of shipments. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems involving multiunit companies were either handled by a special task force of experienced analysts in Jeffersonville or were referred to the Washington office.

Computer Editing.—All of the establishment records from the 1972 censuses of manufactures and mineral industries underwent computerized processes of screening and detailed testing of data. While many of these programs were newly devised in 1972 they were largely based on similar programs in use during previous censuses. Average values and tolerance limits for key

operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per man-hour, etc.) played a fundamental role in the editing process. However, more extensive testing and more sophisticated routines for adjusting data which failed the tests were incorporated into the 1972 programs. The need for computer editing may be judged by the fact that more than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of application of these programs.

In the 1972 census of manufactures, nearly 386,000 establishments were initially defined as being potentially in scope of manufacturing establishments. Approximately 55,000 were identified as having no activity in 1972 or actually out of scope of manufacturing. There were approximately 18,000 duplicate establishment records, which were removed. The ending file consisted of nearly 313,000 establishments engaged in manufacturing activities.

In sequence, the computer programs used included a Housekeeping and Screening Edit, a Coverage Control and Matching Edit, a Magnitude Edit, a General Statistics Edit, an Intercard-Intercolumn Edit, a Product and Materials Edit, Duplicate Removal Programs, and various programs of referral and of aggregate testing. These programs are described in outline form below. Also included within this sequence were programs of geographic coding and of industry coding, subindustry coding, and SIC recoding which are described elsewhere in this Introduction.

The *Housekeeping and Screening Edit* was designed to inspect each record for the presence of basic information such as identification numbers, geographic codes, and source codes (that is, ASM, census of manufactures, or census of minerals). This program also included some simple data adjustments, such as the replacement of a missing total by a corresponding sum of detail.

The *Coverage Control and Matching Edit* was a system of programs which checked the consistency of clerically assigned codes with information reported on the ownership status of the establishment. For ASM establishments, the program included matching with the 1971 ASM record file to identify corresponding prior-year records.

The *Magnitude Edit* was designed to test the size of two key items—payrolls and value of shipments. For ASM establishments, these items were compared with the corresponding entries for 1971 and were accepted if satisfactory. If not accepted, the ASM records were channeled through the standard edit which compared payrolls to a historical employment-size code. Payroll figures passing the test were then used, in conjunction with cost of materials, in testing the value of shipments.

When failures in the magnitude tests were encountered, a fixed sequence of attempts to adjust the data were performed,

¹⁸In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

which included dividing a reported figure by 1,000 (a common error was the reporting of values in dollars rather than in thousands of dollars as requested), or replacing a total by a sum of detail where these differed.

More than 34,000 establishments were rejected from the combined output of the Housekeeping and Screening Edit, from the Coverage Control and Matching Edit, and from the Magnitude Edit. These rejects were clerically reviewed, corrected where necessary, and recycled back into the computer.

The *General Statistics Edit* tested key operating ratios and adjusted the record or flagged it for later attention if it failed the test. Fifty-two such ratios were assigned for use in testing census of manufactures records, and 41 ratios of change between 1971 and 1972 were used in testing the ASM reports. The tolerance limits and average values for these 93 ratios were based on the limits used for the corresponding tests in the 1967 census, with some correction and updating based on the 1971 ASM information.

In the presence of ratio failures, the computer program was designed to determine the component of the ratio which was most likely to have caused the failure. This was done by a process of inspecting other ratios containing each of the suspect components, and by computing an overall weighted-reliability index for each. The component with the lowest reliability index was judged to be incorrect. The computer then attempted to adjust the questionable figure by a process of "rounding" (multiplying or dividing by successive powers of 10), substitution of a total by a sum of detail, or by imputation based on one of the several ratios in which the suspect component was contained. After each such attempted adjustment, the new figure was accepted if it resulted in an improved reliability index.

In addition to the testing and correction of reported information, the General Statistics Edit was the vehicle for the imputation of data for the 120,000 establishments designated as administrative-record cases, as well as data for companies whose reports were not received at the time the data were tabulated. Imputation for all reasons, failure to report as well as administrative records, accounted overall for about 5 percent of the total value of shipments. Records were not rejected and removed from the computer tapes in the General Statistics Edit, but were flagged and printed out for review by an analyst whenever the computer made a large adjustment, found a large year-to-year change, or could not make an acceptable adjustment after test failure. Excluding administrative records, about 22,000 such cases were printed out for review and possible correction.

The *Intercard-Intercolumn Edit* was designed to test specific relationships among products, materials, and special inquiries. The record was flagged for inspection if the test failed; some 11,000 records were printed out for review from this edit.

The *SIC recoding program* recoded industry codes, product codes, and material codes, which were reported on the 1967 SIC system by means of reference tapes to the 1972 SIC system. Each establishment was assigned an old (1967) SIC industry code and a new (1972) SIC industry code based on the product mix reported in item 18 of the report forms. These industry codes were retained in the establishment record in order to tabulate and bridge the information. (See appendix B for a comparison of the old and new SIC's).

The *Product and Materials Edit* was performed after the data on products and materials had been extracted from the basic establishment records, assembled in product (or material) sequence, and recoded to the 1972 SIC code system. The edit was designed to inspect the reported quantities of production and of consumption after the corresponding values were tested and found acceptable. Unit values, in terms of dollar value per unit of quantity, were computed and ranked from highest to lowest. The most extreme values were removed, and the truncated data were used in the formulation of parameters (average deviation, central value, and upper and lower tolerance limits) which were printed out for review by analysts. This routine differs from those in other edits in that the parameters for editing were developed from the data at hand rather than from historic data or predetermined reasonableness limits.

The *Duplicate Removal Programs* were designed to identify and eliminate duplicate establishment records from the census. The sources of duplication were many; imputed records which were followed by late receipts of a report from the respondent were typical; multiunit companies having plants duplicated on their list of establishments; receiving or imputing full-year plant reports from the selling (predecessor) and acquiring (successor) companies; companies being imputed as single units which had reported as multiunits. A potential duplicate program was used to identify, for analysts' inspection, establishments which were in the same industry, same area, and approximately the same size. These programs resulted in the elimination of nearly 18,000 duplicate establishment records from the census file.

As in previous censuses, this preliminary round of computer editing and professional correction was followed by a more detailed review of establishment records. Among the devices used at this stage was an "outlier" program which printed out ASM establishment reports of dubious quality in terms of their internal consistency. The outlier program used some of the same ratios as the General Statistics Edit, but with parameters updated to reflect the characteristics of 1972, rather than earlier data. Records with one or more suspicious ratios were printed out for review. In addition, aggregates of records at the industry and the geographic cell level were inspected with ratio tolerance limits adjusted to reflect the number of establishments contributing to the cell.

12. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The prec canvass and other special procedures for multiunit companies described in section 8, "The Mailing Lists," and section 10, "Data Collection," were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiunit companies, were also used to verify the completeness of establishment coverage. This procedure is discussed in section 11, "Data Processing."

Comparison of statistics tabulated from the census of manufactures with the Census Bureau's Current Industrial Reports series, or with data originating with other agencies was possible

in many instances, thus providing a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the Internal Revenue Service, the Fish and Wildlife Service, and the Department of Agriculture. In the industry reports in Volume II, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Census Bureau's other procedures designed to improve the accuracy of the census data are discussed above in the sections on data collection and processing. Comments on the valuation of intracompany shipments by multiunit companies are included in section 15.

III. COMMENTS ON STATISTICAL MEASURES AND TABLES

(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following sections, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)

13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARY ESTABLISHMENTS

In the industry chapters of Volume II, the data on employment and payrolls refer to operating manufacturing establishments and are so described. In the summary tables and the area reports, the employment and payrolls of central administrative offices and auxiliary establishments are included as well. However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the General Summary tables. The relative importance of administrative offices and auxiliaries has increased substantially in recent years, because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing,

repair services, and miscellaneous others. As indicated in table H, this tendency was quite marked between 1954 and 1963 and between 1967 and 1972.

TABLE H. Employment in Central Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1972 and Earlier Census Years

| Census year | Employees in operating manufacturing establishments | | Employees in central administrative offices and auxiliaries | | |
|-------------|---|--|---|--|--|
| | Thousands of employees | Percent change from previous census year | Thousands of employees | Percent change from previous census year | Percent of total employment ¹ |
| 1972 | 19,029 | +2.9 | 994 | +19.8 | 5.2 |
| 1967 | 18,492 | +14.0 | 830 | +14.3 | 4.3 |
| 1963 | 16,235 | +5.3 | 726 | +20.6 | 4.3 |
| 1958 | 15,423 | -1.4 | 602 | ² +32.9 | 3.8 |
| 1954 | 15,645 | (NA) | 453 | (NA) | 2.8 |

(NA) Not available.

¹ The total includes manufacturing establishments, central administrative offices, and auxiliaries.

² The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

Source: Census of manufactures.

14. MATERIALS

In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected for approximately a thousand specific materials. About 350 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Detailed consumption information was collected in the standard materials inquiry, in the product inquiries (for items which were produced and consumed in the same plant), or in a few instances in special inquiries. The resulting statistics are presented mainly in tables 6A and 7A of the industry chapters, Volume II.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

- (a) The importance of the material as measured by the total value of U.S. consumption of the material;
- (b) The percentage of total consumption accounted for by manufacturing establishments;
- (c) The availability of consumption information from manufacturers' records, and
- (d) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited-coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7A in the industry chapters of Volume II, the following limitations should be noted:

- (a) Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7A represent consumption in secondary products as well as primary products of the industry represented. The extent of secondary production is measured by the specialization and coverage ratios shown in table 5B of the industry chapters.
- (b) Attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and

supplies, not specified by kind." The amounts appearing on these lines represent imputed totals for establishments whose statistics were developed by use of administrative records, and totals for other establishments which failed to report their consumption in specific terms. Thus, for most industries, the specific categories are understated. A judgment on the statistical significance of the understatement for each industry may be made on the basis of the relationship of the value shown for the "not specified by kind" (code 000) line compared with the total of materials, components, parts, containers, and supplies for the industry.

(c) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was \$5,000. The use of this cutoff is not believed to have had a significant effect on the totals.

(d) A total of "not elsewhere classified" (n.e.c.) material code 970099 was collected on most forms and is published for each industry. This represents the total cost of materials for an industry for which no material items were prelisted on the form. Survey MA-131, 1972 Supplemental Survey of Materials Consumed, a sample survey of 141 industries, was conducted in 1972 to provide material consumption estimates for the cost of materials reported in material code 970099. Results of this survey are shown in chapter 5, Materials Consumed.

15. VALUE OF SHIPMENTS BY MULTIUNIT COMPANIES

General.—Except for a few industries as indicated in appendix A, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value, including not only the cost of production but also a reasonable proportion of company overhead and profits. Since there is no advertising or other selling cost involved, it would be expected that the value per unit of such transfers would be less than that for commercial sales. The plant receiving the transferred goods was instructed to include them in its cost of materials, valued as at the shipping point plus the cost of freight and other handling charges.

In the case of goods transferred to sales branches, or sold through separate sales offices, the implication of the "f.o.b. plant" instruction is that the value is at a somewhat lower level than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

In practice, there is reason to believe that these instructions were not followed by all companies. In a recordkeeping practices study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. In the case of finished products transferred to separate selling organizations, half of the companies interviewed valued the products at their final or invoice price, which again would be somewhat higher than the "f.o.b. plant" transfer value requested. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. For products characterized by a substantial amount of interplant shipments, separate quantity and value figures were requested on the census forms. Data on these shipments, the unit value of which is less accurate than the unit value for shipments outside the company, are presented separately in table 6A in the industry chapters of Volume II.

Individual Products.—In the 1972 census program, information was collected on the output of approximately 10,500 individual product items.²⁰ The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases, it may be much more detailed, and in other cases, it is more aggregative. For example, pharmaceutical preparations were reported in terms of 160 products, while canned meats was a single product. Frequently, large aggregative values at the product level indicated that detailed production figures were available from other government sources or reliable private surveys.

Some 5,500 of the product items were listed separately on the 1972 census report forms. Data for the remaining 5,000 products were obtained in the monthly, quarterly, or annual commodity surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1972 for these items as derived from the commodity surveys are shown in the "product shipped" table (table 6A) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected. For products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total quantities produced and often the quantities con-

sumed within the plant were collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of Products.—For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry (see section 4 for application of coding structure to the assignment of SIC codes for establishments).

The 10,500 product items in the 1972 census (including products from the Current Industrial Reports program) were grouped into approximately 1,293 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6B provides information on the value of shipments of product classes by State; and table 5C, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments. In table 5A the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

²⁰ See 1972 Census of Manufactures, MC72-1.2 "Numerical List of Manufactured Products," and MC72-1.1 "Alphabetic List of Manufactured Products," (1967 SIC basis).

INTRODUCTION—Continued

Effect of Use of Administrative Records on Product Data.—As noted elsewhere in this Introduction, 1972 census statistics for about 120,000 small manufacturers were developed by use of IRS and SSA records. Since the SSA records were coded only to the 4-digit SIC level, it was not considered feasible to estimate the product output of these small companies in terms of specific 5-digit product classes or 7-digit products. The total value of output was therefore coded to the 4-digit level and published separately in table 6A of the industry chapters of Volume II. In table I, page 18, these data have been summarized together with other undistributed 4-digit totals reported

by the larger companies. It will be seen from table I that the contribution of the small companies (administrative records) to product totals was of little importance except in lumber, furniture, and printing and publishing (groups 24, 25 and 27). The large companies (mailed establishments) which for various reasons reported only in terms of group totals were of somewhat more importance, accounting overall for about 3 percent of the total value of product shipments.

Nominally, the shipments of "small companies" as shown in table I represent the output of all establishments with less than 10 employees. Actually, only 35 percent of the value of

TABLE I. Value of Products Not Specified by Kind: 1972 and 1967

Note: These values represent product shipments, irrespective of the industry in which the products were made, and therefore differ from the industry group totals shown in the General Summary tables.

¹ The product shipment data for 1972 are tabulated on the 1972 (new) SIC basis; therefore data for 1972 and 1967 are not completely comparable for most of the major 2-digit groups due to the reclassification of products in the 1972 SIC revision across 2-digit groups. See appendix B for the products of 4-digit industries that were reclassified across 2-digit major groups.

² Estimates derived from administrative records. See text for further discussion.

³ In the 1972 SIC revision, the products for Major Group 19 were reclassified to Major Groups 34, 36, 37, and 38.

shipments of establishments with less than 10 employees was obtained from administrative records. This was due to several factors, the most important of which were—

(a) Many of the establishments with less than 10 employees were owned by multiunit companies and were covered in the mail canvass.

(b) Questionnaires were mailed to about 4,000 of the companies identified as having less than 10 employees. These were the small companies included in the ASM sample; the rest were included in the mail canvass to improve the estimates of general statistics, products, and materials.

(c) Some companies identified originally as having 10 employees or more turned out to have less than 10 employees in 1972.

Another factor tended to reduce the value of products not specified by kind attributed to small companies, thus affecting table 1 particularly. This was the fact that some 4-digit industries were represented by only one product category (an example is industry 3273, Ready-Mixed Concrete). Administrative-record estimates for products such as this were treated as specific information and not tabulated under the "not specified by kind" heading.

These factors taken together explain why the value of products "not specified by kind" attributed to small companies in table 1 is only 1.5 percent of the total, while the 159,000 establishments with less than 10 employees account for 2.5 percent of the total value added by manufacture in table E.

The value of product shipments accounted for by the small companies increased from 1.0 percent in the 1967 census to 1.5 percent in 1972. This is because considerably more establishments, initially identified as having less than 10 employees, actually had more than 10 employees in 1972.

The data for many of the specific 7-digit products shown in table 6A are understated by a proportion of the "not specified by kind" codes in each industry.

16. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregates of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries include large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2-digit and 3-digit industry level because these group totals often include industries which represent successive stages in

the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC Major Group 20 and the addition of pulp-mills to papermills in Group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, caution is urged with their use when they are provided at the 2- and 3-digit industry group level.

Even where no significant amount of duplication is involved, value of shipments figures are of limited use as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry. To a large extent, value added by manufacture does not have these limitations and is therefore a better measure for comparison.

17. VALUE ADDED BY MANUFACTURE

General.—Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.²¹

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude purchased business services, as does the national income concept described below.²² Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

²¹ For a few industries (for example, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

²² Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated to plants or if allocated are only included as part of a broader company overhead category. National income data, on the other hand, are compiled in part from company rather than plant data, such as the IRS Statistics of Income in which advertising is presented as a separate cost item based on company reports.

INTRODUCTION—Continued

National income originating in the manufacturing sector, as developed in the national accounts maintained by the Bureau of Economic Analysis (BEA), is somewhat similar to value added in concept, but there are important differences. National income is the aggregate earnings of labor and capital which arise in the current production of goods and services in the manufacturing sector. Thus it measures the total factor costs incurred and is a more "net" conception of value added than that which it has been found feasible to compile in the economic censuses on an establishment basis. National income

excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income estimates are prepared from company rather than establishment data. This method results

¹Source: Survey of Current Business, July 1970; July 1973, p. 22.

²This Major Group was recoded to Major Groups 34, 36, 37 and 38 in the 1972 SIC revision.

in the inclusion of some part of the net value added by non-manufacturing establishments of companies classified as being primarily manufacturing and, conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classified as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases national income. In the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one group in which national income exceeds value added, as shown in table J.

Historical Comparison.—Whatever changes have taken place in the relative importance of the costs included in value added but excluded from national income have been gradual. As shown in table K, the ratio between the two figures has been fairly constant over the past decade.

TABLE K. National Income Originating in Manufacturing and Value Added by Manufacture: 1972 and Earlier Years

| Year | National income originating in manufacturing (bil. dol.) (1) | Value added by manufacture (bil. dol.) (2) | Column 1 divided by column 2 |

Sources: National income, survey of current business; value added, census of manufactures and annual survey of manufactures.

Reconciliation with National Income Components.—Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income originating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about \$15 billion of the \$148 billion of value added in 1957 were maintenance and repairs, \$4.5 billion; insurance, \$.7 billion; property taxes, \$1.5 billion; rental payments, \$1.4 billion; and depreciation, \$7.3 billion. The residual value added, \$132 billion, was approximately \$16 billion in excess of national income of \$116 billion.

Table L presents an approximate reconciliation of national income and value added figures for manufacturing in 1957. The national income estimates for payrolls and other factor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimate appearing in table K. It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by \$35 billion of which \$15 billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the \$35 billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion, in value added, of indirect business taxes and depreciation which are excluded by definition from national income.

18. CAPITAL EXPENDITURES

Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Bureau of Economic Analysis-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments,

³ Supplements to wages.

⁴ Estimate based on figures reported in the 1958 economic censuses.

whereas the BEA-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from

the BEA-SEC series but included in census figures. The BEA-SEC and census data for recent years are shown in tables M and N.

19. PLANT SPECIALIZATION

As discussed in section 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two measures of specialization were computed: (1) A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these

| Other nondurables | 1.1 | 1.6 | 1.45 |

¹Source: 1974 Business Statistics, U.S. Department of Commerce, Bureau of Economic Analysis.

calculations). For example, assume that an establishment reported the following:

| | |
|---|---------|
| Total value of shipments and other receipts | \$1,000 |
| Miscellaneous receipts (resales, etc.) | 15 |
| Total value of products shipped | 985 |
| 32721 Concrete pipe products | 100 |
| 32722 Precast concrete products | 785 |
| 32730 Ready-mixed concrete | 100 |

This plant would be coded into SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ($\$885 \div 985$); it would be subclassified into the 5-digit class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ($\$785 \div 985$).

In the 1972 census, selected general statistics (number of establishments, employment, payrolls, value added, cost of materials, value of shipments, and capital expenditures) were tabulated to primary product-class levels by assigning the plant totals to the principal 5-digit codes. These data are presented in table 5A of the industry chapters, Volume II. For most product classes, table 5A also provides general statistics for establishments specializing in the class to the extent of 75 percent or more.

Table 5A permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup (5-digit). For example, where the ratios among various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by changes in its product mix.

20. OPERATING RATIOS

Since all of the data collected in the census on establishment reports are interrelated, comparisons of the various measures of activity are of considerable interest. Beginning with the 1963 census, several ratios have been routinely computed and presented in the industry chapters of Volume II. For 1972 and earlier years, the following nine ratios were published for each 4-digit industry:

- Payroll per employee
- Production workers as percent of total employment
- Annual man-hours of production workers
- Average hourly earnings of production workers
- Cost of materials per dollar of shipments
- Cost of materials and payrolls per dollar of shipments
- Value added per employee
- Payrolls as percent of value added
- Value added per man-hour of production worker

21. SUBJECT AND SPECIAL REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

Volume I includes the seven subject reports and the six special reports presenting statistics which are not published

elsewhere. The following chapters were originally published in the subject series:

Chapter 1. General Summary.—This chapter, which appears in other volumes as well as Volume I, provides summary tabulations of data presented in greater detail in other census tables.

Chapter 2. Employment and Labor Costs in Operating Manufacturing Establishments.—This chapter presents the compilation of employment and labor costs for the United States as a whole and for each industry group and 4-digit industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

Chapter 3. Manufacturers' Inventories.—These tables summarize the inventory data published in table 3 of the industry chapters of Volume II. A description of the statistics is given in appendix A.

Chapter 4. Expenditures for Plant and Equipment.—These tables summarize the expenditures data published in table 3 of the industry chapters of Volume II. A description of the data is given in appendix A and in section 18, "Capital Expenditures."

Chapter 5. Materials Consumed.—This chapter consists of a compilation of detailed statistics on consumption of materials, fuels, and electricity. These figures also appear in Volume II, Industry Statistics, as tables 7A and 7B for each industry.

Chapter 6. Gross Book Value of Depreciable Assets and Rental Payments.—This chapter presents the compilation of the gross book value of total assets and separate data for structure and machinery by industry group and industry. Rental payments for structures and machinery are also presented by industry group and industry. A more detailed description of the report and explanation of the terms employed is given in the introduction to the chapter.

Chapter 7. Selected Metalworking Operations.—This chapter presents the results of an inquiry concerning employment in metalworking plants such as foundry, forge shop, die casting department, and heat treating. The number of establishments in which these facilities are operated is presented, as well as the number of production workers engaged.

The following chapters were originally published in the special report series:

Chapter 8. Manufacturing Activity in Government Establishments.—This chapter presents data on manufacturing activities in selected types of government establishments in the United States. The statistics are not included in other census of manufactures tables, which cover only privately operated establishments. A more detailed description of the report is given in the introduction to the chapter.

Chapter 9. Concentration Ratios.—This chapter presents concentration ratios and other information on the share of industrial activity accounted for by the largest companies, both for the United States as a whole and for each of the 450 manufacturing industries. A more detailed description of the report and explanations of the terms employed is given in the introduction to the chapter.

Chapter 10. Type of Organization.—This chapter presents data for manufacturing establishments classified as to the legal form of ownership (corporate, individual proprietor, or partnership) and the establishment owner as a multiunit or single-unit company.

Chapter 11. Water Use in Manufacturing.—This chapter presents the results of a survey of the 1973 consumption of water in establishments consuming 20 million gallons or more annually. A more detailed description of the report and definitions of the terms employed, is given in the introduction to the chapter.

Chapter 12. Textile Machinery in Place.—This chapter presents the results of a 1973 survey on the number, by kind, of the various textile machines. Geographic breakdowns of the major textile operations are presented. The data are also broken out by industry for the various textile machines. A description of the statistics is given in the chapter.

Chapter 13. Fuels and Electric Energy Consumed.—This chapter consists of a compilation of detailed statistics on the consumption of fuels and electric energy from the 1971 Annual Survey of Manufactures. Data are presented on the quantity and costs of fuels and electric energy consumed for major groups and industries. A more detailed explanation of the estimates derived and terms employed are given in the introduction and the explanatory text for the chapter.

22. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, geographic region and division totals are given precedence over individual States; States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities. In tables showing industry detail, major industry group (2-digit) totals take precedence over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

23. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

| | |
|--------|---|
| — | Zero |
| X | Not applicable |
| NA | Not available |
| D | Withheld to avoid disclosing figures for individual companies |
| n.e.c. | Not elsewhere classified |
| n.s.k. | Not specified by kind |
| lin. | Linear |
| equiv. | Equivalent |
| hp | Horsepower |
| kWh | Kilowatt-hours |
| SIC | Standard Industrial Classification |
| IRS | Internal Revenue Service |
| SSA | Social Security Administration |
| ASM | Annual Survey of Manufactures |
| CIR | Current Industrial Reports |
| BEA | Bureau of Economic Analysis |
| SEC | Securities and Exchange Commission |

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

Industry Descriptions

(Following is a compilation of the Industrial Security Classification (SIC) major groups and industries covered in the three parts of this volume of industry statistics.)

PART 1

Major Group 20—FOOD AND KINDRED PRODUCTS

20A Meat Products

- 2011 Meatpacking plants
- 2013 Sausages and other prepared meats
- 2016 Poultry dressing plants
- 2017 Poultry and egg processing

20B Dairy Products

- 2021 Creamery butter
- 2022 Cheese, natural and processed
- 2023 Condensed and evaporated milk
- 2024 Ice cream and frozen desserts
- 2026 Fluid milk

20C Preserved Fruits and Vegetables

- 2032 Canned specialties
- 2033 Canned fruits and vegetables
- 2034 Dehydrated fruits, vegetables, soups
- 2035 Pickles, sauces, and salad dressings
- 2037 Frozen fruits and vegetables
- 2038 Frozen specialties

20D Grain Mill Products

- 2041 Flour and other grain mill products
- 2043 Cereal breakfast foods
- 2044 Rice milling
- 2045 Blended and prepared flour
- 2046 Wet corn milling
- 2047 Dog, cat, and other pet food
- 2048 Prepared feeds, n.e.c.

20E Bakery Products

- 2051 Bread, cake, and related products
- 2052 Cookies and crackers

20F Sugar and Confectionery Products

- 2061 Raw cane sugar
- 2062 Cane sugar refining
- 2063 Beet sugar
- 2065 Confectionery products
- 2066 Chocolate and cocoa products
- 2067 Chewing gum

20G Fats and Oils

- 2074 Cottonseed oil mills
- 2075 Soybean oil mills
- 2076 Vegetable oil mills, n.e.c.
- 2077 Animal and marine fats and oils
- 2079 Shortening and cooking oils

20H Beverages

- 2082 Malt beverages
- 2083 Malt
- 2084 Wines, brandy, and brandy spirits
- 2085 Distilled liquor, except brandy
- 2086 Bottled and canned soft drinks
- 2087 Flavoring extracts and sirups, n.e.c.

20I Miscellaneous Foods and Kindred Products

- 2091 Canned and cured seafoods
- 2092 Fresh or frozen packaged fish
- 2095 Roasted coffee
- 2097 Manufactured ice
- 2098 Macaroni and spaghetti
- 2099 Food preparations, n.e.c.

Major Group 21—TOBACCO MANUFACTURES

21A Tobacco Products

- 2111 Cigarettes
- 2121 Cigars
- 2131 Chewing and smoking tobacco
- 2141 Tobacco stemming and redrying

Major Group 22—TEXTILE MILL PRODUCTS

22A Weaving Mills

- 2211 Weaving mills, cotton
- 2221 Weaving mills, manmade fiber and silk
- 2231 Weaving and finishing mills, wool
- 2241 Narrow fabric mills

22B Knitting Mills

- 2251 Women's hosiery, except socks
- 2252 Hosiery, n.e.c.
- 2253 Knit outerwear mills
- 2254 Knit underwear mills
- 2257 Circular knit fabric mills
- 2258 Warp knit fabric mills
- 2259 Knitting mills, n.e.c.

22C Dyeing and Finishing Textiles, Except Wool Fabrics and Knit Goods

- 2261 Finishing plants, cotton
- 2262 Finishing plants, manmade fiber and silk
- 2269 Finishing plants, n.e.c.

22D Floor Covering Mills

- 2271 Woven carpets and rugs
- 2272 Tufted carpets and rugs
- 2279 Carpets and rugs, n.e.c.

22E Yarn and Thread Mills

- 2281 Yarn mills, except wool
- 2282 Throwing and winding mills
- 2283 Wool yarn mills
- 2284 Thread mills

22F Miscellaneous Textile Goods

- 2291 Felt goods, except woven felts and hats
- 2292 Lace goods
- 2293 Paddings and upholstery filling
- 2294 Processed textile waste
- 2295 Coated fabrics, not rubberized
- 2296 Tire cord and fabric
- 2297 Nonwoven fabrics
- 2298 Cordage and twine
- 2299 Textile goods, n.e.c.

Major Group 23—APPAREL AND OTHER TEXTILE PRODUCTS

23A Men's and Boys' Apparel

- 2311 Men's and boys' suits and coats
- 2321 Men's and boys' shirts and nightwear
- 2322 Men's and boys' underwear
- 2323 Men's and boys' neckwear
- 2327 Men's and boys' separate trousers
- 2328 Men's and boys' work clothing
- 2329 Men's and boys' clothing, n.e.c.

23B Women's and Misses' Outerwear

- 2331 Women's and misses' blouses and waists
- 2335 Women's and misses' dresses
- 2337 Women's and misses' suits and coats
- 2339 Women's and misses' outerwear, n.e.c.

23C Women's and Children's Underwear, Headwear, Children's Outerwear

- 2341 Women's and children's underwear
- 2342 Brassieres and allied garments
- 2351 Millinery
- 2352 Hats and caps, except millinery
- 2361 Children's dresses and blouses
- 2363 Children's coats and suits
- 2369 Children's outerwear, n.e.c.

23D Miscellaneous Apparel and Accessories

- 2371 Fur goods
- 2381 Fabric dress and work gloves
- 2384 Robes and dressing gowns
- 2385 Waterproof outer garments
- 2386 Leather and sheep lined clothing
- 2387 Apparel belts
- 2389 Apparel and accessories, n.e.c.

23E Miscellaneous Fabricated Textile Products

- 2391 Curtains and draperies
- 2392 Housefurnishings, n.e.c.
- 2393 Textile bags
- 2394 Canvas and related products
- 2395 Pleating and stitching
- 2396 Automotive and apparel trimmings
- 2397 Schiffli machine embroideries
- 2399 Fabricated textile products, n.e.c.

Major Group 24—LUMBER AND WOOD PRODUCTS

24A Logging Camps, Sawmills, and Planing Mills

- 2411 Logging camps and logging contractors
- 2421 Sawmills and planing mills, general
- 2426 Hardwood dimension and flooring
- 2429 Special product sawmills, n.e.c.

24B Millwork, Plywood, and Structural Wood Members, N.E.C.

- 2431 Millwork
- 2434 Wood kitchen cabinets
- 2435 Hardwood veneer and plywood
- 2436 Softwood veneer and plywood
- 2439 Structural wood members, n.e.c.

24C Wooden Containers and Miscellaneous Wood Products

- 2441 Nailed wood boxes and shooks
- 2448 Wood pallets and skids
- 2449 Wood containers, n.e.c.
- 2491 Wood preserving
- 2492 Particleboard
- 2499 Wood products, n.e.c.

24D Wood Buildings and Mobile Homes

- 2451 Mobile homes
- 2452 Prefabricated wood buildings

PART 2

Major Group 25—FURNITURE AND FIXTURES

25A Household Furniture

- 2511 Wood household furniture
- 2512 Upholstered household furniture
- 2514 Metal household furniture
- 2515 Mattresses and bedsprings
- 2517 Wood TV and radio cabinets
- 2519 Household furniture, n.e.c.

INDUSTRY DESCRIPTIONS—Continued

**25B Office, Public Building, and Miscellaneous Furniture;
Office and Store Fixtures**

- 2521 Wood office furniture
- 2522 Metal office furniture
- 2531 Public building and related furniture
- 2541 Wood partitions and fixtures
- 2542 Metal partitions and fixtures
- 2591 Drapery hardware and blinds and shades
- 2599 Furniture and fixtures, n.e.c.

27C Greeting Cards; Bookbinding; Printing Trade Services

- 2771 Greeting card publishing
- 2782 Blankbooks and looseleaf binders
- 2789 Bookbinding and related work
- 2791 Typesetting
- 2793 Photoengraving
- 2794 Electrotyping and stereotyping
- 2795 Lithographic platemaking services

Major Group 26—PAPER AND ALLIED PRODUCTS

26A Pulp, Paper, and Board Mills

- 2611 Pulpmills
- 2621 Papermills, except building paper
- 2631 Paperboard mills
- 2661 Building paper and board mills

**26B Converted Paper and Paperboard Products, Except
Containers and Boxes**

- 2641 Paper coating and glazing
- 2642 Envelopes
- 2643 Bags, except textile bags
- 2645 Die-cut paper and board
- 2646 Pressed and molded pulp goods
- 2647 Sanitary paper products
- 2648 Stationery products
- 2649 Converted paper products, n.e.c.

26C Paperboard Containers and Boxes

- 2651 Folding paperboard boxes
- 2652 Setup paperboard boxes
- 2653 Corrugated and solid fiber boxes
- 2654 Sanitary food containers
- 2655 Fiber cans, drums, and similar products

Major Group 26—PRINTING AND PUBLISHING

**27A Newspapers, Periodicals, Books, and Miscellaneous
Publishing**

- 2711 Newspapers
- 2721 Periodicals
- 2731 Book publishing
- 2732 Book printing
- 2741 Miscellaneous publishing

27B Commercial Printing and Manifold Business Forms

- 2751 Commercial printing, letterpress
- 2752 Commercial printing, lithographic
- 2753 Engraving and plate printing
- 2754 Commercial printing, gravure
- 2761 Manifold business forms

Major Group 28—CHEMICALS AND ALLIED PRODUCTS

28A Industrial Inorganic Chemicals

- 2812 Alkalies and chlorine
- 2813 Industrial gases
- 2816 Inorganic pigments
- 2819 Industrial inorganic chemicals, n.e.c.

**28B Plastics Materials, Synthetic Rubber, and Manmade
Fibers**

- 2821 Plastics materials and resins
- 2822 Synthetic rubber
- 2823 Cellulosic manmade fibers
- 2824 Organic fibers, noncellulosic

28C Drugs

- 2831 Biological products
- 2833 Medicinals and botanicals
- 2834 Pharmaceutical preparations

28D Soap, Cleaners, and Toilet Goods

- 2841 Soap and other detergents
- 2842 Polishes and sanitation goods
- 2843 Surface active agents
- 2844 Toilet preparations

28E Paints and Allied Products

- 2851 Paints and allied products

28F Industrial Organic Chemicals

- 2861 Gum and wood chemicals
- 2865 Cyclic crudes and intermediates
- 2869 Industrial organic chemicals, n.e.c.

28G Agricultural Chemicals

- 2873 Nitrogenous fertilizers
- 2874 Phosphatic fertilizers
- 2875 Fertilizers, mixing only
- 2879 Agricultural chemicals, n.e.c.

28H Miscellaneous Chemical Products

- 2891 Adhesives and sealants
- 2892 Explosives
- 2893 Printing ink
- 2895 Carbon black
- 2899 Chemical preparations, n.e.c.

Major Group 29--PETROLEUM AND COAL PRODUCTS

29A Petroleum and Coal Products

- 2911 Petroleum refining
- 2951 Paving mixtures and blocks
- 2952 Asphalt felts and coatings
- 2992 Lubricating oils and greases
- 2999 Petroleum and coal products, n.e.c.

Major Group 30--RUBBER AND PLASTICS PRODUCTS

30A Rubber and Miscellaneous Plastics Products

- 3011 Tires and inner tubes
- 3021 Rubber and plastics footwear
- 3031 Reclaimed rubber
- 3041 Rubber and plastics hose and belting
- 3069 Fabricated rubber products, n.e.c.
- 3079 Miscellaneous plastics products

Major Group 31--LEATHER AND LEATHER PRODUCTS

31A Tanning; Industrial Leather Goods; and Shoes

- 3111 Leather tanning and finishing
- 3131 Boot and shoe cut stock and findings
- 3142 House slippers
- 3143 Men's footwear, except athletic
- 3144 Women's footwear, except athletic
- 3149 Footwear, except rubber, n.e.c.

31B Leather Gloves; Luggage; and Miscellaneous Leather Goods

- 3151 Leather gloves and mittens
- 3161 Luggage
- 3171 Women's handbags and purses
- 3172 Personal leather goods
- 3199 Leather goods, n.e.c.

Major Group 32--STONE, CLAY, AND GLASS PRODUCTS

32A Glass Products

- 3211 Flat glass
- 3221 Glass containers
- 3229 Pressed and blown glass, n.e.c.
- 3231 Products of purchased glass

32B Cement and Structural Clay Products

- 3241 Cement, hydraulic
- 3251 Brick and structural clay tile
- 3253 Ceramic wall and floor tile
- 3255 Clay refractories
- 3259 Structural clay products, n.e.c.

32C Pottery and Related Products

- 3261 Vitreous plumbing fixtures
- 3262 Vitreous china food utensils
- 3263 Fine earthenware food utensils
- 3264 Porcelain electrical supplies
- 3269 Pottery products, n.e.c.

32D Concrete, Plaster, and Cut-Stone Products

- 3271 Concrete block and brick
- 3272 Concrete products, n.e.c.
- 3273 Ready-mixed concrete
- 3274 Lime
- 3275 Gypsum products
- 3281 Cut stone and stone products

32E Abrasive, Asbestos, and Miscellaneous Nonmetallic Mineral Products

- 3291 Abrasive products
- 3292 Asbestos products
- 3293 Gaskets, packing and sealing devices
- 3295 Minerals, ground or treated
- 3296 Mineral wool
- 3297 Nonclay refractories
- 3299 Nonmetallic mineral products, n.e.c.

Major Group 33--PRIMARY METAL INDUSTRIES

33A Blast Furnaces, Steel Works, and Rolling and Finishing Mills

- 3312 Blast furnaces and steel mills
- 3313 Electrometallurgical products
- 3315 Steel wire and related products
- 3316 Cold finishing of steel shapes
- 3317 Steel pipe and tubes

33B Ferrous and Nonferrous Foundries

- 3321 Gray iron foundries
- 3322 Malleable iron foundries
- 3324 Steel investment foundries
- 3325 Steel foundries, n.e.c.
- 3361 Aluminum foundries
- 3362 Brass, bronze, and copper foundries
- 3369 Nonferrous foundries, n.e.c.

33C Smelting and Refining of Nonferrous Metals and Alloys

- 3331 Primary copper
- 3332 Primary lead
- 3333 Primary zinc
- 3334 Primary aluminum
- 3339 Primary nonferrous metals, n.e.c.
- 3341 Secondary nonferrous metals

33D Nonferrous Metal Mills and Miscellaneous Primary Metal Products

- 3351 Copper rolling and drawing
- 3353 Aluminum sheet, plate, and foil
- 3354 Aluminum extruded products
- 3355 Aluminum rolling and drawing, n.e.c.
- 3356 Nonferrous rolling and drawing, n.e.c.
- 3357 Nonferrous wiredrawing and insulating
- 3398 Metal heat treating
- 3399 Primary metal products, n.e.c.

PART 3

Major Group 34—FABRICATED METAL PRODUCTS

34A Metal Cans, Cutlery, Handtools, and General Hardware

- 3411 Metal cans
- 3412 Metal barrels, drums, and pails
- 3421 Cutlery
- 3423 Hand and edge tools, n.e.c.
- 3425 Handsaws and saw blades
- 3429 Hardware, n.e.c.

34B Heating Apparatus, Except Electric and Warm Air Furnaces, and Plumbing Fixtures

- 3431 Metal sanitary ware
- 3432 Plumbing fittings and brass goods
- 3433 Heating equipment, except electric

34C Fabricated Structural Metal Products

- 3441 Fabricated structural metal products
- 3442 Metal doors, sash, and trim
- 3443 Fabricated platework (boiler shops)
- 3444 Sheet metalwork
- 3446 Architectural metalwork
- 3448 Prefabricated metal buildings
- 3449 Miscellaneous metalwork

34D Screw Machine Products, Fasteners and Washers; Metal Forgings and Stampings; and Metal Services

- 3451 Screw machine products
- 3452 Bolts, nuts, rivets, and washers
- 3462 Iron and steel forgings
- 3463 Nonferrous forgings
- 3465 Automotive stampings
- 3466 Crowns and closures
- 3469 Metal stampings, n.e.c.
- 3471 Plating and polishing
- 3479 Metal coating and allied services

34E Ordnance and Accessories, N.E.C.

- 3482 Small arms ammunition
- 3483 Ammunition, except for small arms, n.e.c.
- 3484 Small arms
- 3489 Ordnance and accessories, n.e.c.

34F Miscellaneous Fabricated Metal Products

- 3493 Steel springs, except wire
- 3494 Valves and pipe fittings
- 3495 Wire springs
- 3496 Miscellaneous fabricated wire products
- 3497 Metal foil and leaf
- 3498 Fabricated pipe and fittings
- 3499 Fabricated metal products, n.e.c.

Major Group 35—MACHINERY, EXCEPT ELECTRICAL

35A Engines and Turbines and Farm Machinery and Equipment

- 3511 Turbines and turbine generator sets
- 3519 Internal combustion engines, n.e.c.
- 3523 Farm machinery and equipment
- 3524 Lawn and garden equipment

35B Construction, Mining, and Materials Handling Machinery and Equipment

- 3531 Construction machinery
- 3532 Mining machinery
- 3533 Oilfield machinery
- 3534 Elevators and moving stairways
- 3535 Conveyors and conveying equipment
- 3536 Hoists, cranes, and monorails
- 3537 Industrial trucks and tractors

35C Metalworking Machinery and Equipment

- 3541 Machine tools, metal-cutting types
- 3542 Machine tools, metal-forming types
- 3544 Special dies, tools, jigs, and fixtures
- 3545 Machine tool accessories
- 3546 Power-driven handtools
- 3547 Rolling mill machinery
- 3549 Metalworking machinery, n.e.c.

35D Special Industry Machinery, Except Metalworking Machinery

- 3551 Food products machinery
- 3552 Textile machinery
- 3553 Woodworking machinery
- 3554 Paper industries machinery
- 3555 Printing trades machinery
- 3559 Special industry machinery, n.e.c.

35E General Industrial Machinery and Equipment

- 3561 Pumps and pumping equipment
- 3562 Ball and roller bearings
- 3563 Air and gas compressors
- 3564 Blowers and fans
- 3565 Industrial patterns
- 3566 Speed changers, drives, and gears
- 3567 Industrial furnances and ovens
- 3568 Power transmission equipment, n.e.c.
- 3569 General industrial machinery, n.e.c.

INDUSTRY DESCRIPTIONS--Continued

- 35F Office, Computing, and Accounting Machines**
 3572 Typewriters
 3573 Electronic computing equipment
 3574 Calculating and accounting machines
 3576 Scales and balances, except laboratory
 3579 Office machines, n.e.c.

- 35G Service Industry Machines and Machine Shops**
 3581 Automatic merchandising machines
 3582 Commercial laundry equipment
 3585 Refrigeration and heating equipment
 3586 Measuring and dispensing pumps
 3589 Service industry machinery, n.e.c.
 3592 Carburetors, pistons, rings, valves
 3599 Machinery, except electrical, n.e.c.

Major Group 36--ELECTRIC AND ELECTRONIC EQUIPMENT

- 36A Electrical Measurement and Distribution Equipment**
 3612 Transformers
 3613 Switchgear and switchboard apparatus
 3621 Motors and generators
 3622 Industrial controls
 3623 Welding apparatus, electric
 3624 Carbon and graphite products
 3629 Electrical industrial apparatus, n.e.c.

- 36B Household Appliances**
 3631 Household cooking equipment
 3632 Household refrigerators and freezers
 3633 Household laundry equipment
 3634 Electric housewares and fans
 3635 Household vacuum cleaners
 3636 Sewing machines
 3639 Household appliances, n.e.c.

- 36C Electric Lighting and Wiring Equipment**
 3641 Electric lamps
 3643 Current-carrying wiring devices
 3644 Noncurrent-carrying wiring devices
 3645 Residential lighting fixtures
 3646 Commercial lighting fixtures
 3647 Vehicular lighting equipment
 3648 Lighting equipment, n.e.c.

- 36D Communication Equipment, Including Radio and TV, and Electronic Components and Accessories**
 3651 Radio and TV receiving sets
 3652 Phonograph records and prerecorded magnetic tapes
 3661 Telephone and telegraph apparatus
 3662 Radio and TV communication equipment
 3671 Electron tubes, receiving type
 3672 Cathode ray television picture tubes

- 36D-- Communication Equipment, Including Radio and Con. TV, and Electronic Components and Accessories**
 3673 Electron tubes, transmitting
 3674 Semiconductors and related devices
 3675 Electronic capacitors
 3676 Electronic resistors
 3677 Electronic coils and transformers
 3678 Electronic connectors
 3679 Electronic components, n.e.c.

- 36E Miscellaneous Electrical Equipment and Supplies**
 3691 Storage batteries
 3692 Primary batteries, dry and wet
 3693 X-ray apparatus and tubes
 3694 Engine electrical equipment
 3699 Electrical equipment and supplies, n.e.c.

Major Group 37--TRANSPORTATION EQUIPMENT

- 37A Motor Vehicles and Equipment**
 3711 Motor vehicles and car bodies
 3713 Truck and bus bodies
 3714 Motor vehicle parts and accessories
 3715 Truck trailers

- 37B Aerospace Equipment Including Parts**
 3721 Aircraft
 3724 Aircraft engines and engine parts
 3728 Aircraft equipment, n.e.c.
 3761 Guided missiles and space vehicles
 3764 Space propulsion units and parts
 3769 Space vehicle equipment, n.e.c.

- 37C Ship and Boat Building, Railroad and Miscellaneous Transportation Equipment**
 3731 Ship building and repairing
 3732 Boat building and repairing
 3743 Railroad equipment
 3751 Motorcycles, bicycles, and parts
 3792 Travel trailers and campers
 3795 Tanks and tank components
 3799 Transportation equipment, n.e.c.

Major Group 38--INSTRUMENTS AND RELATED PRODUCTS

- 38A Engineering, Measuring and Controlling, and Optical Instruments**
 3811 Engineering and scientific instruments
 3822 Environmental controls
 3823 Process control instruments
 3824 Fluid meters and counting devices
 3825 Instruments to measure electricity
 3829 Measuring and controlling devices, n.e.c.
 3832 Optical instruments and lenses

INDUSTRY DESCRIPTIONS—Continued

38B Medical Instruments; Ophthalmic Goods; Photographic Equipment; Clocks, Watches, and Watchcases

- 3841 Surgical and medical instruments
- 3842 Surgical appliances and supplies
- 3843 Dental equipment and supplies
- 3851 Ophthalmic goods
- 3861 Photographic equipment and supplies
- 3873 Watches, clocks, and watchcases

Major Group 39—MISCELLANEOUS MANUFACTURING INDUSTRIES

39A Jewelry, Silverware, and Plated Ware

- 3911 Jewelry, precious metal
- 3914 Silverware and plated ware
- 3915 Jewelers' materials and lapidary work

39B Musical Instruments and Parts; Toys and Sporting Goods

- 3931 Musical instruments
- 3942 Dolls

39B— Musical Instruments and Parts; Toys and Sporting Goods

- 3944 Games, toys, and children's vehicles
- 3949 Sporting and athletic goods, n.e.c.

39C Office Supplies, Costume Jewelry, and Notions

- 3951 Pens and mechanical pencils
- 3952 Lead pencils and art goods
- 3953 Marking devices
- 3955 Carbon paper and inked ribbons
- 3961 Costume jewelry
- 3962 Artificial flowers
- 3963 Buttons
- 3964 Needles, pins, and fasteners

39D Miscellaneous Manufactures

- 3991 Brooms and brushes
- 3993 Signs and advertising displays
- 3995 Burial caskets
- 3996 Hard-surface floor coverings
- 3999 Manufacturing industries, n.e.c.

General Summary Tables

TABLES

Page

| | | |
|---|---|----|
| 1 | General Statistics for All Operating Manufacturing Establishments: 1972 and Earlier Years | 3 |
| 2 | Manufacturing Employment: 1972 and Prior Census Years | 4 |
| 3 | General Statistics for Establishments by Industry Group and Industry: 1972 and 1967. | 6 |
| 4 | Selected Statistics on Central Administrative Offices and Auxiliaries, by Major Industry Group of Establishments Serviced: 1972 | 22 |
| 5 | Detailed Statistics by Major Industry Group: 1972 | 23 |
| 6 | Manufacturing Employment and Payroll for Geographic Areas: 1972 and Prior Census Years. | 26 |
| 7 | General and Comparative Statistics by Geographic Area: 1972 and Prior Census Years | 47 |
| 8 | General Statistics, by Employment Size of Establishment: 1972. | 68 |

The first of the year was a very cold one, and the weather was very disagreeable. The snow was very deep, and the wind was very strong. The people were very much distressed, and the crops were very much damaged. The government was very much troubled, and the people were very much dissatisfied. The king was very much angry, and the queen was very much sad. The people were very much poor, and the country was very much poor. The government was very much weak, and the people were very much poor. The king was very much angry, and the queen was very much sad. The people were very much poor, and the country was very much poor.

TABLE 1. General Statistics for All Operating Manufacturing Establishments: 1972 and Earlier Years

(See appendix, Explanation of Terms)

| Year | Establishments | | All employees ¹ | | Production workers | | | Value added by manufacture ³ | Value of industry shipments | Capital expenditures, new ⁴ | Index of industrial production (1967=100) |
|--------------------------|----------------|---------------------------|----------------------------|-----------------------|---------------------|------------|-------------------|---|-----------------------------|--|---|
| | Total | With 20 employees or more | Number ² | Payroll | Number ² | Man-hours | Wages | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | |
| 1972..... | 312,662 | 109,941 | 18,032.4 | 160,414.4 | 13,526.5 | 26,696.7 | 105,494.7 | 353,973.4 | 756,466.9 | 24,073.1 | 115.1 |

¹The figures for 1939 to 1972 include data for employees at manufacturing establishments who were engaged in distribution and in construction work. The extent to which data for such employees were included in the figures for earlier years is not known. In addition to the employment and payroll for operating manufacturing establishments, manufacturing concerns ordinarily reported separately for central administrative offices or auxiliary units (e.g., research laboratories, storage warehouses, power plants, garages, repair shops, etc.) which service the manufacturing establishment(s) of a company.

²The method of compiling these figures varied, as follows: All employees: For 1955 to 1972, figures represent the average of the number of production workers for the payroll period ended nearest the 12th of March, May, August, and November, plus all other employees for the payroll period ended nearest the 12th of March; for 1949 to 1954, they represent an average of all employees for the payroll period ended nearest the 12th of March, May, August, and November; for 1947, an average of 12 monthly figures for all employees; and for 1939 and prior years, the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1949 to 1972, figures are based on employment for the payroll period ended nearest the 12th of March, May, August, and November; and for 1947 and prior years, they represent the average of 12 monthly figures.

³For the period 1954 to 1972 value added by manufacture represents adjusted value added and for earlier years, unadjusted value added. Unadjusted value added is obtained by subtracting the cost of materials, supplies and containers, fuel, purchased electric energy, and contract work from the value of shipments for products manufactured plus receipts for services rendered. Adjusted value added also takes into account (a) value added by merchandising operations (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) the net change in finished goods and work-in-process inventories between the beginning and end of the year. For 1849 to 1933, cost of contract work was not subtracted from value of shipments in calculating value added by manufacture.

⁴The figures for 1951 to 1972 include expenditures for plants under construction and not yet in operation. This information was not collected prior to 1951.

⁵These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

Footnotes continued on next page.

TABLE 1. General Statistics for All Operating Manufacturing Establishments: 1972 and Earlier Years—Continued

(Footnotes for table 1)--Continued

⁶The 1958 and subsequent years figures include establishments classified in industry 3273, Ready-Mixed Concrete, and establishments classified in industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively or almost exclusively in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1966 figures include data for establishments engaged in the processing and distribution of fluid milk industry group 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for industry 2411, Logging Camps and Logging Contractors, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas, which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1966 was one employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of \$5,000 or more were within scope, whereas for 1919 and earlier years the cutoff was \$500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

⁷The figures for 1939, but not for earlier years, have been revised on the basis of retabulation of the returns to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing beginning with 1947. Value added by manufacture for 1939, prior to revision and on a basis comparable with 1937 and previous years, was \$24.7 billion.

⁸The 1939 figures for "all employees" were revised on the basis of estimates rather than by retabulation of the 1939 reports. The estimates were made in the following manner: For the number of employees, by multiplying the retabulated figure for number of production workers by the ratio of all employees to production workers computed from the unrevised 1939 statistics; for salaries and wages, by multiplying the retabulated wage figure by the ratio for salaries and wages also derived from the unrevised 1939 statistics.

⁹Not including data for salaried officers of corporations and their salaries and, therefore, not strictly comparable with figures for other years.

¹⁰These figures for 1899 and earlier years represent hand and neighborhood manufacturing operations.

TABLE 2. Manufacturing Employment: 1972 and Prior Census Years

(See appendix, Explanation of Terms)

| 1972 code | Major industry group and year | All establishments | | Operating manufacturing establishments | | Administrative offices and auxiliaries | |

| | 1958.. | 569.5 | 2,838.6 | 560.5 | 2,770.1 | 9.0 | 68.4 |

¹The 1972, 1967, 1963, and most of the 1958 figures represent data for establishments located in the conterminous United States, Alaska, and Hawaii. However, when the 1958 figures were previously published they did not include data for Alaska and Hawaii since these areas did not achieve statehood until 1959. The addition of the 1958 Alaska and Hawaii figures to the previously published figures for major industry groups 26 and 29 would have resulted in a disclosure. Therefore, the 1958 Alaska and Hawaii data are excluded from these major groups but are included at the "all industries" level.

²Excludes ordnance and accessories. In the 1972 SIC revision, Major Group 19 was eliminated as a separate major industry group and its industries were reclassified to Major Groups 34, 36, 37, and 38.

TABLE 3. General Statistics for Establishments by Industry Group and Industry: 1972 and 1967

(See appendix, Explanation of Terms)

| 1972 code | Industry group and industry | 1972 | | | | | | | | | |

Note: In 1972, the payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. X) Not applicable. NA) Not available. D) Withheld to avoid disclosing figures for individual companies.

¹The total value of shipments for industry groups (2- and 3-digit) and a few individual industries (4-digit) includes extensive duplication arising from shipments between establishments in the same industry classification.

²Establishments in this industry reported value of production instead of value of shipments. Consequently, the formula for computing value added by manufacture was modified to exclude any change in finished product inventories between the beginning and end of the year.

³Value added data include government-owned, contractor-operated plants which were estimated based upon averages reported for commercial establishments in prior years. Cost of materials data exclude government-owned materials furnished to government-owned, contractor-operated plants and include fuel and electricity purchased by or for

the establishments. Value of shipments data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added plus the cost of fuels and electric energy. Capital expenditures, new, include expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

⁴Includes expenditures for plants in operation and for plants under construction but not yet in operation.

⁵Government-owned, privately operated establishments did not enter into the calculation of "Primary product specialization ratio" or "Coverage ratio" as all other dollar receipts for these establishments were included in "Miscellaneous receipts."

⁶The value of shipments and cost of materials for this industry include substantial duplication; therefore, the specialization ratios and coverage ratios were not calculated.

⁷Relationships are not meaningful because of the predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.

⁸Establishments in this industry were requested to report value of work done instead of value of shipments. Consequently, the formula for computing value added by manufacture was not adjusted for any inventory change between the beginning and end of the year.

⁹In 1972 and 1967, in addition to the employment and payroll reported for operating manufacturing establishments, manufacturing concerns reported separately for central administrative offices or auxiliary units which serve the manufacturing establishments of a company (e.g., storage warehouses, power plants, research laboratories, garages, repair shops, etc.) rather than the general public. Separate reports were obtained if these units were at different general locations from the establishments served or if they serviced more than one manufacturing establishment. The figures shown for these units do not represent a separate industry but rather a balancing total for all manufacturing industries.

⁶For the SMSA's listed in the table below (which were retitled for 1972), historical data is revised to the current definition in this table.

| New title | Old titles |
|----------------------------------|--|
| Dallas-Fort Worth SMSA..... | Dallas SMSA and Forth Worth SMSA |
| Northeast Pennsylvania SMSA..... | Scranton SMSA and Wilkes-Barre-Hazleton SMSA |
| Raleigh-Durham SMSA..... | Raleigh SMSA and Durham SMSA |

TABLE 7. General and Comparative Statistics by Geographic Area: 1972 and Prior Census Years

(See appendix, Explanation of Terms)

| Geographic area ¹ and year | Establishments ² | | All employees ² | | Production workers | | | Value added by manu- facture | Cost of materials | Value of shipments | Capital expendi- tures, new ³ | Comparative indexes and U.S. employment | | | |
|--|-----------------------------|---------------------------------|----------------------------|-----------|--------------------|-----------|-----------|------------------------------------|----------------------|-----------------------|---|---|---------------------------------------|---------------------------------------|-----------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | Percent of U.S. employ- ment | Index of employ- ment change | United States | |
| | | | | | | | | | | | | | | Index of employ- ment change | Employees |
| | | | | | | | | | | | | | | | |

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹The 1958 and subsequent years' figures include establishments classified in industry 3273, Ready-Mixed Concrete, and establishments classified in industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively, or almost exclusively, in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1972 figures include data for establishments engaged in the processing and distribution of fluid milk, industry group 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for Logging Camps and Logging Contractors, industry 2411, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1963 was 1 employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of \$5,000 or more were within scope whereas for 1919 and earlier years, the cutoff was \$500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

²Employment and payroll totals for central administrative offices and auxiliaries are included in the statistics shown for the years 1954 to 1972. Prior to 1954, this information was not available. The "number of establishments with 20 employees or more" total for 1958 and all previous years and "total number of establishments" total for 1954 and previous years does not include data for central administrative offices and auxiliaries.

³For the years 1958 to 1972, includes expenditures for plants under construction but not in operation in addition to expenditures at operating manufacturing establishments. Prior to 1958, the data represents expenditures at operating manufacturing establishments only.

⁴Does not include data for Alaska and Hawaii.

⁵Data for 1954 employment and payroll exclude central administrative offices and auxiliary units. This information was not collected for Alaska and Hawaii in 1954.

⁶This SCA changed definition in 1972. Historical data prior to 1972 are based on the old definition. (See appendix F for the old and new definitions.)

⁷This table includes data only for standard metropolitan statistical areas with 40,000 or more manufacturing employees in 1972 or 1967. The definitions of the standard metropolitan statistical areas are shown in appendix F.

⁸This SMSA changed definition in 1972. Historical data prior to 1972 are based on the old definition. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. (See appendix F for the old and new definitions.)

⁹This SMSA changed definition in 1972. Historical data prior to 1972 are based on the old definition. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. (See appendix F for the old and new definitions.)

¹⁰Comparable data for years prior to 1958 are not available due to a revision in the definition of the standard metropolitan statistical area. See the 1958 or 1954 Census of Manufactures, Area Statistics, Volume III, for statistics for the area as defined at that time.

¹¹This SMSA changed definition in 1972. Historical data have been revised accordingly. (See appendix F for the old and new definitions.)

¹²This SMSA was defined after the 1967 census. Historical data are not available.

TABLE 8. General Statistics, by Employment Size of Establishment: 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

MAJOR GROUP 20

Food and Kindred Products

- 20A Meat products
- 20B Dairy products
- 20C Preserved fruits and vegetables
- 20D Grain mill products
- 20E Bakery products
- 20F Sugar and confectionery products
- 20G Fats and oils
- 20H Beverages
- 20I Miscellaneous foods and kindred products

This major group includes establishments manufacturing or processing foods and beverages for human consumption, and certain related products, such as manufactured ice, chewing gum, vegetable and animal fats and oils, and prepared feeds for animals and fowls.

TABLE 1. General Statistics: 1972 and Earlier Years

(See appendix, Explanation of Terms)

| Year and item | Establishments | | All employees ¹ | | Production workers | | | Value added by manufacture ² | Cost of materials ³ | Value of industry shipments ³ | Capital expenditures, new ⁴ |
|---|----------------|---------------------------|----------------------------|-------------------|--------------------|------------|-------------------|---|--------------------------------|--|--|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) |

(X) Not applicable. (NA) Not available.

¹The figures for 1939 through 1972 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known. "Production workers" includes driver-salesmen in the bakery products industry (SIC 2051) for 1939 and prior years, but not for 1947 to 1972. The number of driver-salesmen for 1939 was at least 120,000.

²For the period 1954 to 1972, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy, and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1921 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture. See "Value Added by Manufacture" in Introduction.

³The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

⁴The figures for 1958 to 1972 include expenditures for plants under construction and not yet in operation.

⁵See appendix C of the General Summary for the 1972 changes in the Standard Industrial Classification.

⁶The figures for 1954 to 1972 include data for milk bottling plants (SIC 2026) which were not covered in prior years. Value added for this industry was \$1,475,638 thousand in 1954.

⁷In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, and prior to 1949.

⁸These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

TABLE 2. General Statistics by Geographic Area: 1972 and 1967

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

²The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

EXPLANATORY TEXT

MEAT PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2011—Meatpacking Plants

2013—Sausages and Other Prepared Meat Products*

2016—Poultry Dressing Plants

2017—Poultry and Egg Processing

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2011.—MEATPACKING PLANTS

This industry comprises establishments primarily engaged in slaughtering, for their own account or on a contract basis for the trade, cattle, hogs, sheep, lambs, and calves for meat to be sold or to be used on the same premises in canning and curing, and in making sausage, lard, and other products. Establishments primarily engaged in killing, dressing, and packing poultry, rabbits, and other small game are classified in industry 2016; and those primarily engaged in killing and processing horses and other nonfood animals are classified in industry 2047 (Dog, Cat, and Other Pet Food). Establishments primarily engaged in manufacturing sausages and meat specialties from purchased meats are classified in industry 2013; and establishments primarily engaged in canning meat for baby food are

classified in industry 2032 Canned Specialties. For a detailed list of products of industry 2011, refer to table 6A, product codes 20111 12 to 20119 98.

Some slaughtering operations are conducted in establishments not included in the census of manufactures, such as those chiefly engaged in wholesale or retail trade, locker plant services, etc. The census of manufactures is believed to include about 90 percent of the volume of commercial livestock slaughter.

Industries 2011 and 2013 are similar in many respects and for some purposes should be viewed as one industry. Prepared meats (smoked meats, sausages, canned meats, etc.) are produced by each industry; fresh meats, especially primal cuts and variety meats, are shipped by each. The distinguishing characteristic of industry 2011 is the slaughtering of livestock, and of industry 2013 the use of purchased meat material. Nearly all of the fresh meat used as a raw material by plants in industry 2013 is supplied by plants in industry 2011; in addition, a considerable volume of fresh meat material is sold or transferred between plants in industry 2011 for use in further processing.

The 1972 definition of this industry is the same as that used in the 1967 classification system, and the SIC number and title are also the same. However, the content of the industry has been slightly changed from the previous classification system: Baby food meats are now classified in industry 2032, Canned Specialties, and animal feeds are included in industry 2047, Dog, Cat, and Other Pet Food. These changes have an insignificant effect on industry aggregates.

Value of shipments and other receipts of meatpacking plants in 1972 totaled \$23,024.0 million. This included shipments of meatpacking plant products (primary products) valued at \$21,559.7 million, shipments of other products (secondary products) valued at \$390.5 million, and miscellaneous receipts (mainly resales) of \$1,073.8 million.

Shipments of meatpacking plant products (primary products) in 1972 represented 98 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 98 percent. Secondary products shipped by this industry in 1972 consisted mainly of sausages and other prepared meats (\$3,466.0 million) and animal and marine fats and oils (\$251.8 million).

Shipments of meatpacking plant products (primary products) from establishments classified in industry 2011 in 1972 represented 84 percent (coverage ratio) of these products valued at \$25,539.0 million shipped by all industries. In 1967, the coverage ratio was 85 percent. Other industries shipping meatpacking plant products consisted mainly of industry

*Note that the "short title" for this industry is used throughout the report.

2013, Sausages and Other Prepared Meats, (\$45.8 million) and industry 2077, Animal and Marine Fats and Oils, (\$16.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2011, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2013.—SAUSAGES AND OTHER PREPARED MEATS (Short Title)

This industry comprises establishments primarily engaged in manufacturing sausages, cured meats, smoked meats, canned meats, frozen meats, natural sausage casings, and other prepared meats and meat specialties from purchased carcasses and other materials. Sausage kitchens and other prepared meat plants operated by packing houses as separate establishments are also included in this industry. Establishments primarily engaged in canning or otherwise processing poultry, rabbits, and other small game are classified in industries 2016 and 2017. Establishments primarily engaged in the cutting up and resale of purchased fresh carcasses are classified in trade industries. Establishments primarily engaged in canning meat for baby food are classified in industry 2032 (Canned Specialties). For a detailed list of products of industry 2013, refer to table 6A, product codes 20136 12 to 20139 61.

A considerable volume of prepared meats are produced in manufacturers' wholesale branches primarily engaged in the wholesale distribution of meat and, therefore, classified as wholesale establishments in the 1972 census. The volume of prepared meats manufactured in these establishments was not measured in the 1972 census. Prepared meats manufactured in retail and independent wholesale establishments are also not included in the census of manufactures statistics.

The 1972 definition of this industry is the same as that used in the 1967 classification system and the SIC number and title are also the same. However, the content of the industry has been slightly changed from the previous classification system; baby food meats are now classified in industry 2032, Canned Specialties, and animal feeds are included in industry 2047, Dog, Cat, and Other Pet Food. These changes have an insignificant effect on industry aggregates.

Value of shipments and other receipts of the Sausages and Other Prepared Meats Industry in 1972 totaled \$4,632.4 million. This included shipments of sausages and other prepared meat products (primary products) valued at \$3,790.0 million, shipments of other products (secondary products)

valued at \$118.3 million, and miscellaneous receipts (mainly resales) of \$723.2 million.

Shipments of sausages and other prepared meat products (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent. Secondary products shipped by this industry in 1972 consisted mainly of meatpacking plant products (\$45.8 million), frozen specialties (\$27.2 million), and canned specialties (\$22.1 million).

Shipments of sausages and other prepared meats (primary products) from establishments classified in industry 2013 in 1972 represented 52 percent (coverage ratio) of these products valued at \$7,284.0 million shipped by all industries. In 1967, the coverage ratio was 46 percent. Other industries shipping sausages and other prepared meats consisted mainly of industry 2011, Meatpacking Plants, (\$3,466.0 million) and industry 2032, Canned Specialties, (\$19.1 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2013, these establishments accounted for 7 percent of value of shipments.

INDUSTRY 2016.—POULTRY DRESSING PLANTS

This industry comprises establishments primarily engaged in slaughtering and dressing poultry for their own account or on a contract basis for the trade for meat to be sold or to be used on the same premises in further processing, including cooking, smoking, raw-boning, canning, freezing, and dehydrating. This industry also includes the killing, dressing, and packing of rabbits and other small game. Establishments primarily engaged in processing purchased carcasses are classified in industry 2017. For a detailed list of products of industry 2016, refer to table 6A, product codes 20161 33 to 20164 15.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. Under the 1967 SIC classification system, these data were collected in industry 2015, Poultry and Small Game Dressing and Packing, Wholesale. The statistics for industry 2015 were split, as a result of the 1972 edition of the SIC manual, into two new separate industries: Industry 2016, Poultry Dressing Plants, and industry 2017, Poultry and Egg Processing.

The effect of the revisions on the data is summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new

SIC. As can be seen from table 1C, all of the 652 establishments with 92.2 thousand total employment and \$892.9 million value added would have been classified in industry 2015 under the old SIC basis. However, under the new SIC basis 522 establishments with 77.6 thousand employees and value added of \$724.4 million are classified in the new industry 2016, Poultry Dressing Plants. The balance are now classified in the new industry 2017, Poultry and Egg Processing.

Value of shipments and other receipts of Poultry Dressing Plants in 1972 totaled \$3,254.1 million. This included shipments of poultry dressing plant products (primary products) valued at \$2,968.2 million, shipments of other products (secondary products) valued at \$182.9 million, and miscellaneous receipts (mainly resales) of \$203.3 million.

Shipments of poultry dressing plant products (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of poultry and egg processing products (\$35.9 million), frozen specialties (\$8.3 million), and creamery butter (\$3.9 million).

Shipments of poultry dressing plant products (primary products) from establishments classified in industry 2016 in 1972 represented 97 percent (coverage ratio) of these products valued at \$3,068.8 million shipped by all industries. Other industries shipping poultry dressing plant products consisted mainly of industry 2017, Poultry and Egg Processing, (\$56.4 million); industry 2075, Soybean Oil Mills, (14.7 million); and industry 2038, Frozen Specialties, (6.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2016, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2017.—POULTRY AND EGG PROCESSING

This industry comprises establishments primarily engaged in the preparation of processed poultry products from purchased carcasses, including cooking, smoking, raw-boning, canning, freezing, and dehydrating, for their own account or on a contract basis for the trade; or in the drying, freezing, and breaking of eggs. The cleaning, oil treating, packing, and grading of eggs are classified in industry 5144 (Poultry and Poultry Products) Wholesale Trade. Establishments primarily engaged in the cutting up and resale of purchased fresh carcasses are classified in the trade industries. For a detailed

list of products of industry 2017, refer to table 6A, product codes 20171 13 to 20172 57.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. Under the 1967 SIC classification system, these data were collected in industry 2015, Poultry and Small Game Dressing and Packing, Wholesale. The statistics for industry 2015 were split, as a result of the 1972 edition of the SIC manual, into two new separate industries: Industry 2016, Poultry Dressing Plants, and industry 2017, Poultry and Egg Processing.

The effect of the revisions on the data is summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, all of the 652 establishments with 92.2 thousand total employment and \$892.9 million value added would have been classified in industry 2015 under the old SIC basis. However, under the new SIC basis 130 establishments with 14.6 thousand employees and value added of \$168.5 million are classified in the new industry 2017, Poultry and Egg Processing. The balance are now classified in the new industry 2016, Poultry Dressing Plants.

Value of shipments and other receipts of Poultry and Egg Processing Plants in 1972 totaled \$588.1 million. This included shipments of poultry and egg processing plant products (primary products) valued at \$462.8 million, shipments of other products (secondary products) valued at \$88.2 million, and miscellaneous receipts (mainly resales) of \$37.1 million.

Shipments of poultry and egg processing plant products (primary products) in 1972 represented 84 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of poultry dressing products (\$56.4 million), sausages and other prepared meats (\$10.6 million), and canned specialties (\$7.1 million).

Shipments of poultry and egg processing plant products (primary products) from establishments classified in industry 2017 in 1972 represented 88 percent (coverage ratio) of these products valued at \$525.5 million shipped by all industries. Other industries shipping poultry and egg processing plant products consisted mainly of industry 2016, Poultry Dressing Plants, (\$35.9 million) and industry 2038, Frozen Specialties, (\$22.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2017, these establishments accounted for 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|--|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2011 | Industry 2013 | Industry 2016 | Industry 2017 |

TABLE 1A. General Statistics: 1958 to 1972—Continued

(Footnotes for table 1A)--Continued

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²The statistics for industry 2015, Poultry and Small Game Dressing and Packing, Wholesale, as classified under the classification system followed in the 1967 Census were split, as a result of the 1972 edition of the SIC manual, into two separate industries: Industry 2016, Poultry Dressing Plants; and industry 2017, Poultry and Egg Processing.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar of shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

| Industry | Composition of new industry | | | | | Totals for industries on old SIC | | | | |
|---|-----------------------------|---------------------------|---------------|----------------------------|--------------------|----------------------------------|---------------------------|---------------|----------------------------|--------------------|
| | Establishments | | All employees | Value added by manufacture | Value of shipments | Establishments | | All employees | Value added by manufacture | Value of shipments |
| | Total | With 20 employees or more | | | | Total | With 20 employees or more | | | |
| | (number) | (number) | (1,000) | (million dollars) | (million dollars) | (number) | (number) | (1,000) | (million dollars) | (million dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|---|----------------------|-----------------------|-----------------------|--------------------------------|--|-------------------------------------|-----------------------------|--------------------------------|-------------------------------|

(NA) Not available.

¹Includes prepared meats and natural sausage, but excludes fresh meat processed from purchased carcasses, which are classified as resales.

²Includes fresh meat products shipped from plants which did not slaughter animals.

³Includes, as part of resales, fresh meat products processed from purchased carcasses.

⁴New SIC basis.

⁵In 1967, the new SIC codes 2016, Poultry Dressing Plants, and 2017, Poultry and Egg Processing, were included on the old SIC basis in industry 2015, Poultry and Small Game, Dressing and Packing, Wholesale. See text for further discussion regarding SIC changes.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Meat- packing plants (SIC 2011) | Sausages and other prepared meats (SIC 2013) | Poultry dressing plants (SIC 2016) | Poultry and egg processing (SIC 2017) | Other industries |

| 20170 02 | Poultry dressing plant products, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | 6.4 | (X) | 7.7 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. ^r Revised.

¹Substantial quantities of these products are produced in nonmanufacturing establishments and are not included in these data.

²Excludes prepared meats made in slaughtering plants.

³Quantity estimated based on quantity-value relationships for other products.

⁴In the census Current Industrial Reports series M-20K, "Fats and Oils," data are published for the production of various fats and oils. The production of lard as shown in this report amounted to 1,540.6 million pounds in 1972 and 2,077 million pounds in 1967. The production of edible tallow in the M-20K report was 544.8 million pounds for 1972 and 577.8 million pounds for 1967.

⁵Includes prepared meats made in slaughtering plants.

⁶Canned meat products containing less than 20-percent meat are included in the report for industry 2032, Canned Specialties.

⁷Of the \$313 million processed meat, n.s.k., \$85 million is accounted for by plants buying fresh beef and/or pork and cutting it into primal cuts, ribs, etc. Some of the plants are also engaged in "portion control." Because there is no prelisted 7-digit product code which adequately describes this activity, we have included it in 20130 00, Processed meat, n.s.k.

⁸This figure includes 16.6 million of n.s.k., which was included with new 1972 SIC code 20161 00 as code 20151 00 in 1967. The 1967 figure was revised based on a percentage of total product class 20151.

⁹A large number of firms reported their shipments in 1,000 pounds rather than 1,000 cases as originally requested on the form. Those firms which reported in units of 1,000 cases have been adjusted to million pounds based on industry average for reporting mills.

¹⁰N.s.k. revised to reflect change in SIC product codes based on percentage of total reported value of shipments.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

(NA) Not available.

These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

| 7B | Fuels and Electric Energy Consumed: 1971 and 1967 | 23 |

EXPLANATORY TEXT

DAIRY PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2021—Creamery Butter
- 2022—Cheese, Natural and Processed
- 2023—Condensed and Evaporated Milk
- 2024—Ice Cream and Frozen Desserts
- 2026—Fluid Milk

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2021.—CREAMERY BUTTER

This industry comprises establishments primarily engaged in manufacturing creamery butter. For a detailed list of products of industry 2021, refer to table 6A, product codes 20210 13 to 20210 21.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Creamery Butter Industry in 1972 totaled \$808.3 million. This included shipments of creamery butter (primary products) valued at \$553.5 million, shipments of other products (secondary products) valued at \$226.1 million, and miscellaneous receipts (mainly resales) of \$28.7 million.

Shipments of creamery butter (primary products) in 1972 represented 71 percent (specialization ratio) of the industry's

total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 71 percent. Secondary products shipped by this industry in 1972 consisted mainly of condensed and evaporated milk (\$153.7 million) and fluid milk (\$60.5 million).

Shipments of creamery butter (primary products) from establishments classified in industry 2021 in 1972 represented 70 percent (coverage ratio) of these products valued at \$791.1 million shipped by all industries. In 1967, the coverage ratio was 75 percent. Other industries shipping creamery butter consisted mainly of industry 2026, Fluid Milk, (\$110.8 million); industry 2023, Condensed and Evaporated Milk, (\$89.6 million); and industry 2022, Cheese, Natural and Processed, (\$32.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2021, these establishments accounted for 7 percent of value of shipments.

INDUSTRY 2022.—CHEESE, NATURAL AND PROCESSED

This industry comprises establishments primarily engaged in manufacturing all types of natural cheese (except cottage cheese in industry 2026), processed cheese, cheese foods, and cheese spreads. For a detailed list of products of industry 2022, refer to table 6A, product codes 20221 01 to 20222 19.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Cheese, Natural and Processed, Industry in 1972 totaled \$3,195.0 million. This included shipments of cheese, natural and processed, (primary products) valued at \$2,704.6 million, shipments of other products (secondary products) valued at \$335.3 million, and miscellaneous receipts (mainly resales) of \$155.1 million.

Shipments of cheese, natural and processed, (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of creamery butter (\$32.2 million); condensed and evaporated milk (\$37.7 million); fluid milk

(\$122.3 million); pickles, sauces, and salad dressings (\$50 to \$100 million); and shortening and cooking oils (\$20 to \$50 million).

Shipments of cheese, natural and processed, (primary products) from establishments classified in industry 2022 in 1972 represented 98 percent (coverage ratio) of these products valued at \$2,753.7 million shipped by all industries. In 1967, the coverage ratio was also 98 percent. Other industries shipping cheese, natural and processed, consisted mainly of industry 2026, Fluid Milk, (\$29.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2022, these establishments accounted for 7 percent of value of shipments.

INDUSTRY 2023.—CONDENSED AND EVAPORATED MILK

This industry comprises establishments primarily engaged in manufacturing condensed and evaporated milk and related products, including ice-cream mix and ice-milk mix made for sale as such, and dry milk products. For a detailed list of products of industry 2023, refer to table 6A, product codes 20231 31 to 20234 12.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Condensed and Evaporated Milk Industry in 1972 totaled \$1,667.8 million. This included shipments of condensed and evaporated milk (primary products) valued at \$1,157.1 million, shipments of other products (secondary products) valued at \$295.9 million, and miscellaneous receipts (mainly resales) of \$214.8 million.

Shipments of condensed and evaporated milk (primary products) in 1972 represented 80 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 82 percent. Secondary products shipped by this industry in 1972 consisted mainly of creamery butter (\$89.6 million), ice cream and frozen desserts (\$20.6 million), fluid milk (\$131.9 million), and food preparations, n.e.c., (\$6.5 million).

Shipments of condensed and evaporated milk (primary products) from establishments classified in industry 2023 in 1972 represented 68 percent (coverage ratio) of these products valued at \$1,706.2 million shipped by all industries. In 1967, the coverage ratio was 71 percent. Other industries shipping

condensed and evaporated milk consisted mainly of industry 2026, Fluid Milk, (\$328.5 million), and industry 2021, Creamery Butter, (\$153.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2023, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2024.—ICE CREAM AND FROZEN DESSERTS

This industry comprises establishments primarily engaged in manufacturing ice cream and other frozen desserts. For a detailed list of products of industry 2024, refer to table 6A, product codes 20240 13 to 20240 97.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Ice Cream and Frozen Desserts Industry in 1972 totaled \$1,244.7 million. This included shipments of ice cream and frozen desserts (primary products) valued at \$1,066.9 million, shipments of other products (secondary products) valued at \$47.6 million, and miscellaneous receipts (mainly resales) of \$130.2 million.

Shipments of ice cream and frozen desserts (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of condensed and evaporated milk (\$15.2 million), fluid milk (\$16.5 million), and food preparations, n.e.c., (\$10 to \$20 million).

Shipments of ice cream and frozen desserts (primary products) from establishments classified in industry 2024 in 1972 represented 70 percent (coverage ratio) of these products valued at \$1,519.4 million shipped by all industries. In 1967, the coverage ratio was 73 percent. Other industries shipping ice cream and frozen desserts consisted mainly of industry 2026, Fluid Milk, (\$422.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2024, these

establishments accounted for 10 percent of value of shipments.

INDUSTRY 2026.—FLUID MILK

This industry comprises establishments primarily engaged in processing (pasteurizing, homogenizing, vitaminizing, and bottling) and distributing fluid milk and cream and related products, including cottage cheese. For a detailed list of products of industry 2026, refer to table 6A, product codes 20261 12 to 20264 35.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Fluid Milk Industry in 1972 totaled \$9,395.8 million. This included shipments of fluid milk (primary products) valued at \$7,325.0 million, shipments of other products (secondary products) valued at \$1,034.5 million, and miscellaneous receipts (mainly resales) of \$1,036.3 million.

Shipments of fluid milk (primary products) in 1972 represented 88 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The indus-

try specialization ratio in 1967 was 90 percent. Secondary products shipped by this industry in 1972 consisted mainly of ice cream and frozen desserts (\$422.6 million), condensed and evaporated milk (\$328.5 million), and creamery butter (\$110.8 million).

Shipments of fluid milk (primary products) from establishments classified in industry 2026 in 1972 represented 96 percent (coverage ratio) of these products valued at \$7,662.7 million shipped by all industries. In 1967, the coverage ratio was also 96 percent. Other industries shipping fluid milk consisted mainly of industry 2023, Condensed and Evaporated Milk, (\$131.9 million); industry 2022, Cheese, Natural and Processed, (\$122.3 million); and industry 2021, Creamery Butter, (\$60.5 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2026, these establishments accounted for 8 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|---|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

| 1958 Census..... | 5,828 | 2,239 | 212.2 | 1,009.6 | 86.3 | 182.3 | 369.3 | 1,998.5 | 4,444.5 | 6,412.3 | 135.7 | (NA) | 152.8 | 90 | 95 |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2021 | Industry 2022 | Industry 2023 | Industry 2024 | Industry 2026 |
|-----------|---------------|---------------|---------------|---------------|---------------|
| 1972..... | 201 | 739 | 172 | 561 | 2,025 |
| 1967..... | 510 | 891 | 179 | 713 | 2,988 |
| 1963..... | 725 | 982 | 167 | 901 | 4,030 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee | Assets per employee | Production worker as percent of total employment | Annual man-hours of production workers | Average hourly earnings of production workers | Cost of materials per dollar of shipments | Cost of materials and payrolls per dollar of shipments | Assets per dollar of shipments | Value added per employee | Payrolls as percent of value added | Value added per man-hour of production worker |
|---------------------------------|----------------------|---------------------|--|--|---|---|--|--------------------------------|--------------------------|------------------------------------|---|

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

TABLE 4. General Statistics, by Employment Size of Establishment: 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|---|----------------------------|---------------|-------------------|--------------------|------------|-------------------|---|--|---|--|

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|--|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |
| | | (million dollars) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. B & C | (million dollars) | (million dollars) | (million dollars) | Col. B Col. F |

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Creamery butter (SIC 2021) | Cheese, natural and processed (SIC 2022) | Condensed and evaporated milk (SIC 2023) | Ice cream and frozen desserts (SIC 2024) | Fluid milk (SIC 2026) | Other industries |
|--------------|--|----------------|----------------------------|--|--|--|-----------------------|------------------|
| | Total shipments and miscellaneous receipts..... | (X) | 808.3 | 3,195.0 | 1,667.8 | 1,244.7 | 9,395.8 | (X) |
| 20210 | Creamery butter..... | 791.1 | 553.5 | 32.2 | 89.6 | - | 110.8 | 5.0 |

| 20264 00 | Buttermilk, chocolate drink, and other dairy drinks, n.s.k..... | ...do..... | 29.4 | 13.2 | 12.3 | 5.0 |
| 20260 00 | Fluid milk and related products, n.s.k., for companies with 10 employees or more. (See note.)..... | | (X) | 456.0 | (X) | 641.4 |
| 20260 02 | Fluid milk and related products, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | 104.0 | (X) | 79.6 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹The data for 1972 and 1967 present totals as collected in the census of manufactures as well as comparable totals from Current Industrial Reports series. The product detail as shown are those collected on the CIR form specified.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1972 and 1967—Continued

(Footnotes for table 6B)

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

- Represents zero.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

(X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies.

¹Cost of delivered butter for industry 2021, Creamery Butter, probably should have been reported by respondents as part of their cost of resales.²Included with material code 970099.³This item represents the total cost of materials for establishments that did not report detailed materials data. This item also includes estimates for companies that were not mailed report forms.

EXPLANATORY TEXT

PRESERVED FRUITS AND VEGETABLES

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2032—Canned Specialties**
- 2033—Canned Fruits, Vegetables, Preserves, Jams, and Jellies***
- 2034—Dried and Dehydrated Fruits, Vegetables, and Soup Mixes***
- 2035—Pickled Fruits and Vegetables, Vegetable Sauces and Seasonings, and Salad Dressings***
- 2037—Frozen Fruits, Fruit Juices, and Vegetables***
- 2038—Frozen Specialties**

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing production/shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products produced/shipped by establishments classified in the specified industry and also the value of primary products of the industry produced/shipped as secondary products by establishments classified in other industries.

INDUSTRY 2032.—CANNED SPECIALTIES

This industry comprises establishments primarily engaged in canning specialty products such as baby foods, "native foods," health foods, and soups, except seafood. Establishments primarily engaged in canning seafoods other than frozen are classified in industry 2091 (Canned and Cured Seafoods); frozen seafoods in industry 2092 (Fresh or Frozen Packaged

*Note that the "short title" for this industry is used throughout the report.

Fish); and those primarily engaged in quick freezing canned specialties in industry 2038. For a detailed list of products of industry 2032, refer to table 6A, product codes 20321 11 to 20324 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same. However, for 1972, canned baby food meat is now included in industry 2032.

Value of production and other receipts of the Canned Specialties Industry in 1972 totaled \$1,876.6 million. This included production of canned specialties (primary products) valued at \$1,475.2 million, production of other products (secondary products) valued at \$354.4 million, and miscellaneous receipts (mainly resales of products bought and resold without further processing) of \$47.0 million.

Production of canned specialties (primary products) in 1972 represented 81 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was 82 percent. Secondary products produced by this industry in 1972 consisted mainly of canned fruits and vegetables (\$166.5 million) and pickles, sauces, and salad dressings (\$28.6 million).

Production of canned specialties (primary products) by establishments classified in industry 2032 in 1972 represented 91 percent (coverage ratio) of these products valued at \$1,629.9 million produced by all industries. In 1967, the coverage ratio was also 91 percent. Other industries producing canned specialties consisted mainly of industry 2033, Canned Fruits and Vegetables, at \$90.3 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2032, these establishments accounted for 2 percent of value of production.

INDUSTRY 2033.—CANNED FRUITS AND VEGETABLES (Short Title)

This industry comprises establishments primarily engaged in canning fruits, vegetables, and fruit and vegetable juices; and in manufacturing catsup and similar tomato sauces, preserves, jams, and jellies. Establishments primarily engaged in canning seafoods (except frozen) are classified in industry 2091 and

canned specialties, baby foods, and soups (except seafood) in industry 2032. For a detailed list of products of industry 2033, refer to table 6A, product codes 20331 12 to 20338 61.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of production and other receipts of the Canned Fruits and Vegetables Industry in 1972 totaled \$4,043.8 million. This included production of canned fruits and vegetables (primary products) valued at \$3,495.7 million, production of other products (secondary products) valued at \$424.1 million, and miscellaneous receipts (mainly resales of products bought and resold without further processing) of \$124.0 million.

Production of canned fruits and vegetables (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was 90 percent. Secondary products produced by this industry in 1972 consisted mainly of canned specialties (\$90.3 million) and frozen fruits and vegetables (\$102.8 million).

Production of canned fruits and vegetables (primary products) by establishments classified in industry 2033 in 1972 represented 94 percent (coverage ratio) of these products valued at \$3,922.9 million produced by all industries. In 1967, the coverage ratio was 93 percent. Other industries producing canned fruits and vegetables consisted mainly of industry 2032, Canned Specialties, (\$166.5 million) and industry 2037, Frozen Fruits and Vegetables, (\$119.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2033, these establishments accounted for 4 percent of value of production.

INDUSTRY 2034.—DEHYDRATED FRUITS, VEGETABLES, SOUPS (Short Title)

This industry comprises establishments primarily engaged in sun-drying or artificially dehydrating fruits and vegetables or in manufacturing packaged soup mixes from dehydrated ingredients. Establishments primarily engaged in the grading and marketing of farm dried fruits, such as prunes and raisins, are classified in industry 5149 (Groceries and Related Products, N.E.C.). For a detailed list of products of industry 2034, refer to table 6A, product codes 20341 13 to 20342 11.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Dehydrated Fruits, Vegetables, Soups Industry in 1972 totaled \$607.3 million. This included shipments of dehydrated fruits, vegetables, and soup mixes (primary products) valued at \$553.9 million, shipments of other products (secondary products) valued at \$31.0 million, and miscellaneous receipts (mainly resales of products bought and resold without further processing) of \$22.4 million.

Shipments of dehydrated fruits, vegetables, and soup mixes (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 94 percent.

Shipments of dehydrated fruits, vegetables, and soup mixes (primary products) from establishments classified in industry 2034 in 1972 represented 88 percent (coverage ratio) of these products valued at \$625.6 million shipped by all industries. In 1967, the coverage ratio was 86 percent. Other industries shipping dehydrated fruits, vegetables, and soup mixes consisted mainly of industry 2035, Pickles, Sauces, and Salad Dressings, (\$20 to \$50 million); and industry 2037, Frozen Fruits and Vegetables, (\$14.1 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2034, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2035.—PICKLES, SAUCES, AND SALAD DRESSINGS (Short Title)

This industry comprises establishments primarily engaged in pickling and brining fruits and vegetables and in manufacturing salad dressings, vegetable relishes, sauces, and seasonings. Establishments primarily engaged in manufacturing catsup and similar tomato sauces are classified in industry 2033, and those packing purchased pickles and olives in trade industries. For a detailed list of products of industry 2035, refer to table 6A, product codes 20352 11 to 20354 39.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of production and other receipts of the Pickles, Sauces, and Salad Dressings Industry in 1972 totaled \$1,166.7

million. This included production of pickles, sauces, and salad dressings (primary products) valued at \$906.9 million, production of other products (secondary products) valued at \$227.0 million, and miscellaneous receipts (mainly resales of products bought and resold without further processing) of \$32.8 million.

Production of pickled fruits and vegetables, sauces, and salad dressings (primary products) in 1972 represented 80 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was 81 percent. Secondary products produced by this industry in 1972 consisted mainly of shortening and cooking oils (\$94.7 million) and food preparations, n.e.c., (\$44.6 million).

Production of pickled fruits and vegetables, sauces, and salad dressings (primary products) by establishments classified in industry 2035 in 1972 represented 78 percent (coverage ratio) of these products valued at \$1,165.1 million produced by all industries. In 1967, the coverage ratio was 80 percent. Other industries producing pickles, sauces, and salad dressings consisted mainly of industry 2033, Canned Fruits and Vegetables, (\$53.9 million); and industry 2079, Shortening and Cooking Oils, (\$34.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2035, these establishments accounted for 7 percent of value of production.

INDUSTRY 2037.—FROZEN FRUITS AND VEGETABLES (Short Title)

This industry comprises establishments primarily engaged in freezing and coldpacking (freezing) fruits, fruit juices, and vegetables. Establishments primarily engaged in freezing and coldpacking (freezing) food specialties, such as frozen dinners and frozen pizza, are classified in industry 2038; and those primarily engaged in preparing fresh and raw or cooked frozen packaged fish and other seafoods, including soups, in industry 2092. For a detailed list of products of industry 2037, refer to table 6A, product codes 20371 35 to 20372 98.

The 1972 definition of this industry has been revised from that used in the 1967 SIC manual. Although the SIC number is the same, a new title was assigned. In 1967, industry 2037 included frozen fruits, fruit juices, vegetables, and specialties. However, for 1972, industry 2037 no longer includes frozen specialties. The frozen specialty products have been moved to a new SIC number, industry 2038, Frozen Specialties.

The effect of the revisions on the data are summarized in table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC.

As can be seen from table 1C, all of the 644 establishments with 81.2 thousand total employment and \$1,414.1 million value added would have been classified in the old industry 2037 (1967 basis). However, under the new SIC (1972 basis), only 209 establishments accounting for 42.9 thousand employees and \$697.8 million value added remain in the new industry 2037, Frozen Fruits and Vegetables. The newly created industry 2038, Frozen Specialties, receives 435 establishments with 38.3 thousand total employment and \$716.3 million value added.

Value of production and other receipts of the Frozen Fruits and Vegetables Industry in 1972 totaled \$1,852.4 million. This included production of frozen fruits, fruit juices, and vegetables (primary products) valued at \$1,502.2 million, production of other products (secondary products) valued at \$245.4 million, and miscellaneous receipts (mainly resales of products bought and resold without further processing) of \$104.8 million.

Production of frozen fruits, fruit juices, and vegetables (primary products) in 1972 represented 86 percent (specialization ratio) of the industry's total production (primary and secondary). Secondary products produced by this industry in 1972 consisted mainly of canned fruits and vegetables (\$119.2 million), bottled and canned soft drinks (\$21.7 million), and frozen specialties (\$19.3 million).

Production of frozen fruits, fruit juices, and vegetables (primary products) from establishments classified in industry 2037 in 1972 represented 91 percent (coverage ratio) of these products valued at \$1,648.7 million produced by all industries. Other industries producing frozen fruits, fruit juices, and vegetables consisted mainly of industry 2033, Canned Fruits and Vegetables, (\$102.8 million); and industry 2038, Frozen Specialties, (\$14.9 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2037, these establishments accounted for 1 percent of value of production.

INDUSTRY 2038.—FROZEN SPECIALTIES

This industry comprises establishments primarily engaged in freezing and coldpacking (freezing) food specialties, such as

frozen dinners and frozen pizza. Establishments primarily engaged in freezing and coldpacking (freezing) fruits, fruit juices, and vegetables are classified in industry 2037. For a detailed list of products of industry 2038, refer to table 6A, product codes 20381 11 to 20383 11.

The statistics for this industry as classified under the classification system followed in the 1967 census were split, as a result of the 1972 edition of the SIC manual, into two separate industries: Frozen Fruits and Vegetables (SIC 2037) and Frozen Specialties (SIC 2038). Refer to the text for industry 2037, Frozen Fruits and Vegetables, for a more complete description of the SIC revisions.

Value of production and other receipts of the Frozen Specialties Industry in 1972 totaled \$1,935.5 million. This included production of frozen specialties (primary products) valued at \$1,602.8 million, production of other products (secondary products) valued at \$103.3 million, and miscellaneous receipts (mainly resales of products bought and resold without further processing) of \$229.4 million.

Production of frozen specialties (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total production (primary and secondary). Secondary products

produced by this industry in 1972 consisted mainly of poultry and egg processing (\$20 to \$50 million), food preparations, n.e.c., (\$19.1 million), and frozen fruits and vegetables (\$14.9 million).

Production of frozen specialties (primary products) from establishments classified in industry 2038 in 1972 represented 92 percent (coverage ratio) of these products valued at \$1,742.6 million produced by all industries. Other industries producing frozen specialties consisted mainly of industry 2032, Canned Specialties, (\$20 to \$50 million); industry 2051, Bread, Cake, and Related Products, (\$28.2 million); and industry 2037, Frozen Fruits and Vegetables, (\$19.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2038, these establishments accounted for 7 percent of value of production.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture ² | Cost of materials, fuels, etc. | Value of industry production | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|--|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|---|--------------------------------|------------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

| 1959 ASM | (NA) | (NA) | 41.9 | 140.8 | 36.0 | 71.3 | 107.3 | 346.0 | 763.0 | 1,111.8 | 23.1 | (NA) | 219.9 | (NA) | (NA) |
| 1958 Census..... | 426 | 263 | 39.5 | 126.8 | 34.1 | 66.3 | 96.9 | 323.8 | 702.9 | 1,025.9 | 21.0 | (NA) | 200.7 | 87 | 91 |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2032 | Industry 2033 | Industry 2034 | Industry 2035 | Industry 2037 | Industry 2038 |
|-----------|------------------|------------------|------------------|------------------|------------------|------------------|
| 1972..... | 178 | 765 | 133 | 429 | 136 | 388 |
| 1967..... | 150 | 930 | 134 | 479 | (NA) | (NA) |
| 1963..... | 154 | 1,135 | 126 | 541 | (NA) | (NA) |

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Only work-in-process inventories are used in the calculation for the value of production industries.

³Figures relate to value of shipments rather than value of production.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of production ¹ (dollars) | Cost of materials and payrolls per dollar production ¹ (dollars) | Assets per dollar of production ¹ (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

(NA) Not available.

¹For industry 2034, figures relate to value of shipments rather than value of production.

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

| Industry | Composition of new industry | | | | | Totals for industries on old SIC | | | | |
|---|-----------------------------|---------------------------|---------------|----------------------------|---------------------|----------------------------------|---------------------------|---------------|----------------------------|---------------------|
| | Establishments | | All employees | Value added by manufacture | Value of production | Establishments | | All employees | Value added by manufacture | Value of production |
| | Total | With 20 employees or more | | | | Total | With 20 employees or more | | | |
| | (number) | (number) | (1,000) | (million dollars) | (million dollars) | (number) | (number) | (1,000) | (million dollars) | (million dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

²Figures relate to value of shipments rather than value of production.

(See appendix, Explanation of Terms)

¹The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

(See appendix. Explanation of Terms)

See footnotes at end of table.

TABLE 4. General Statistics, by Employment Size of Establishment: 1972—Continued

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

²Figures relate to value of shipments rather than value of production.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization:
1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of production (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|-------------------------|----------------|---------------------------|--------------------|----------------------|-------------------------|--|-------------------------------------|---------------------------------------|---|

See footnotes at end of table.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972—Continued

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of production (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|--|--|
| | | | Number (1,000) | Payroll (million dollars) | Number (1,000) | Man-hours (millions) | Wages (million dollars) | | | | |
| 2038 | FROZEN SPECIALTIES | | | | | | | | | | |
| | ENTIRE INDUSTRY | 435 | 38.3 | 264.1 | 31.8 | 61.5 | 190.1 | 716.3 | 1 221.3 | 1 935.5 | 81.0 |

| 20383 | OTHER FROZEN SPECIALTIES (PRIMARY PRODUCT CLASS OF ESTABLISHMENT). | 85 | 8.7 | 61.3 | 7.0 | 13.4 | 41.2 | 179.6 | 318.4 | 496.8 | 16.2 |
| | ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION. . | 71 | 7.3 | 51.4 | 6.0 | 11.3 | 34.9 | 158.1 | 238.7 | 395.7 | 14.4 |

(D) Withheld to avoid disclosing figures for individual companies.

¹Figures relate to value of shipments rather than value of production.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Production; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of production | | | | | Value of primary product production | | | |
|--------------|--|---------------------|--------------------|--------------------|------------------------|--------------------------------------|-------------------------------------|-----------------------|--------------------------|-------------------------------|

(X) Not applicable.

¹For industry 2034, figures relate to value of shipments rather than value of production.

²New SIC basis.

³Old SIC basis.

⁴In 1967, the statistics for industry 2038 were included in industry 2037, Frozen Fruits and Vegetables.

TABLE 5C. Industry-Product Analysis—Production by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such production is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Canned specialties (SIC 2032) | Canned fruits and vegetables (SIC 2033) | Dehydrated fruits, vegetables, and soups (SIC 2034) | Pickles, sauces, and salad dressings (SIC 2035) | Frozen fruits and vegetables (SIC 2037) | Frozen specialties (SIC 2038) | Other industries |

TABLE 5C. Industry-Product Analysis—Production by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such production is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | Other industries | Product code | Industry, class of products, and miscellaneous receipts | Other industries |
|--------------|---|------------------|--------------|--|------------------|
| | Listing of other industries with over \$2 million shipments of the primary products | | | Listing of other industries with over \$2 million shipments of the primary products--Continued | |
| 2032- | 2011 Meatpacking plants..... | (2-5) | 2034- | 2098 Macaroni and spaghetti..... | (over 2) |

Note: Data shown parenthetically are ranges expressed in millions of dollars.

- Represents zero. (X) Not applicable.

¹For industry 2034, all figures relate to value of shipments rather than value of production.

²The data for product class 20370, Frozen fruits, fruit juices, vegetables, and specialties, n.s.k., is included with product class code 20380, Frozen specialties, n.s.k. As a result, the total for industry 2037 is understated by approximately 5 percent.

TABLE 6A. Products and Product Classes—Quantity and Value of Production by All Producers: 1972 and 1967

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Less than half of the unit of measurement shown (less than 0.1 when rounded). ^r Revised. ^e Over 30 percent of this figure was estimated.

¹For 1967, data were included with product codes 20118 11 and 20138 11 and are not available separately.

²Quantity estimated based on quantity-value relationship for other products.

³In 1967, code 20341 18 was combined with code 20341 29 in order to avoid disclosing the operation of individual companies.

⁴The data shown for 1972 are as reported in the 1972 Census of Manufactures. The total for 1967 for product class 20354--is as reported in the 1967 Census of Manufactures. However, the detail data shown for 1967 are as reported on Census Annual Form MA-20F, Salad Dressing, Mayonnaise, and Related Products. As a result, the detail will not add to the census total shown for 1967.

⁵The 1967 figure for product codes 20371 71 and 20371 73 are included with product code 20371 78.

⁶Includes orange juice, not specified by size, from producers classified in other industries. Due to an error in our design on the report form, it was not feasible to obtain detailed can-size data for these establishments which are canners and bottlers engaged in freezing orange juice.

⁷Included with product code 20371 00.

⁸The data for product code 20371 97, citrus pulp, was inadvertently omitted from the preliminary publication for SIC 2037, Frozen Fruits and Vegetables.

⁹Included with product code 20372 00.

¹⁰The 1972 and 1967 "n.s.k." for industries 2037 and 2038 is included in industry 2038 only. Based on an estimated breakout shown in the preliminary reports for industries 2037 and 2038, in 1972 approximately \$79.9 million of the \$160.6 million total n.s.k. relates to industry 2037. As a result, industry 2037 is understated by approximately 5 percent.

TABLE 6B. Product Classes—Value of Production by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of production (million dollars) | | Product class and geographic area | Value of production (million dollars) | |
|---|--|-------|---|--|-------|

TABLE 6B. Product Classes—Value of Production by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Con.

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of production (million dollars) | | Product class and geographic area | Value of production (million dollars) | |

TABLE 6B. Product Classes—Value of Production by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Con.

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of production (million dollars) | | Product class and geographic area | Value of production (million dollars) | |

| | | | California..... | 45.0 | (NA) |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9 CC.....\$5.0 to \$9.9 FF.....\$20.0 to \$49.9
BB.....\$2.0 to \$4.9 EE.....\$10.0 to \$19.9 GG.....\$50.0 and over

(NA) Not available.

¹The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 10 percent of the total 1967 shipments at the U.S. level.

²For product classes 20341 and 20342, figures relate to value of shipments rather than value of production.

³In 1967, product class codes 20381 (new SIC basis), 20382 (new SIC basis), and 20383 (new SIC basis) were included in product class code 20373 (old SIC basis) and are not available separately for 1967.

TABLE 6C. Product Classes—Value of Production by All Manufacturing Establishments:
1958, 1963, 1967 to 1972

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²The individual product codes included in this class of product for 1972 differ from the 1967 definition. Products shifting into or out of this class of product represent approximately 10 percent of the total 1967 shipments at the U.S. level.

³Figures relate to value of shipments rather than value of production.

⁴The data for product class 20370, Frozen fruits and vegetables, n.s.k., are included with product class code 20380, Frozen specialties, n.s.k., as a result, the total for industry 2037 is understated by approximately 5 percent.

⁵In 1967 and prior years, product class codes 20381 (new SIC basis) and 20383 (new SIC basis) were included in product class code 20373 (old SIC basis) and are not available separately under the new SIC classification.

EXPLANATORY TEXT

GRAIN MILL PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2041—Flour and Other Grain Mill Products
- 2043—Cereal Breakfast Foods
- 2044—Rice Milling
- 2045—Blended and Prepared Flour
- 2046—Wet Corn Milling
- 2047—Dog, Cat, and Other Pet Food
- 2048—Prepared Feeds and Feed Ingredients for Animals and Fowls, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2041.—FLOUR AND OTHER GRAIN MILL PRODUCTS

This industry comprises establishments primarily engaged in milling flour or meal from grain except rice (industry 2044). The products of flour mills may be sold plain or in the form of prepared mixes for specific purposes. Establishments primarily engaged in manufacturing prepared flour mixes from purchased ingredients are classified in industry 2045. For a detailed list of products of industry 2041, refer to table 6A, product codes 20411 05 to 20416 27.

*Note that the "short title" for this industry is used throughout the report.

The code number as well as the definition of this industry was unchanged between 1967 and 1972.

Value of shipments and other receipts of the Flour and Other Grain Mill Products Industry in 1972 totaled \$2,380.0 million. This included shipments of flour and other grain mill products (primary products) valued at \$2,244.9 million, shipments of other products (secondary products) valued at \$57.9 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$77.2 million.

Shipments of flour and other grain mill products (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 93 percent. Secondary products shipped by this industry in 1972 consisted mainly of prepared feeds, n.e.c., (\$29.4 million); cereal breakfast foods; and wet corn milling (\$9.4 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 5A.

Shipments of flour and other grain mill products (primary products) from establishments classified in industry 2041 in 1972 represented 74 percent (coverage ratio) of these products valued at \$3,026.7 million shipped by all industries. In 1967, the coverage ratio was 78 percent. Other industries shipping flour and other grain mill products consisted mainly of industry 2043, Cereal Breakfast Foods, (\$138.4 million) and industry 2045, Blended and Prepared Flour, (\$516.1 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2041, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2043.—CEREAL BREAKFAST FOODS

This industry comprises establishments primarily engaged in manufacturing cereal breakfast foods and related preparations. For a detailed list of products of industry 2043, refer to table 6A, product codes 20430 11 to 20430 59.

The code number as well as the definition of this industry was unchanged between 1967 and 1972.

Value of shipments and other receipts of the Cereal Breakfast Foods Industry in 1972 totaled \$1,125.5 million. This included shipments of cereal preparations (primary products) valued at \$783.2 million, shipments of other products (secondary products) valued at \$233.8 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$108.5 million.

Shipments of cereal preparations (primary products) in 1972 represented 77 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 81 percent. Secondary products shipped by this industry in 1972 consisted mainly of flour mill products and blended and prepared flour (\$138.4 million).

Shipments of cereal preparations (primary products) from establishments classified in industry 2043 in 1972 represented 84 percent (coverage ratio) of these products valued at \$934.6 million shipped by all industries. In 1967, the coverage ratio was 82 percent. Other industries shipping cereal preparations consisted mainly of industry 2045, Blended and Prepared Flour.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2043, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2044.—RICE MILLING

This industry comprises establishments primarily engaged in cleaning and polishing rice, and in manufacturing rice flour or meal. Important products of this industry include brown rice, milled rice (including polished rice), rice polish, rice bran, and rice flour. For a detailed list of products of industry 2044, refer to table 6A, product codes 20440 11 to 20440 98.

The code number as well as the definition of this industry was unchanged between 1967 and 1972.

Value of shipments and other receipts of the Rice Milling Industry in 1972 totaled \$680.6 million. This included shipments of rice milling (primary products) valued at \$657.7 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$22.9 million.

Shipments of rice milling (primary products) in 1972 represented 100 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 100 percent.

Shipments of rice milling (primary products) from establishments classified in industry 2044 in 1972 represented 98 percent (coverage ratio) of these products valued at \$671.2 million shipped by all industries. In 1967, the coverage ratio was also 98 percent. Other industries shipping rice milling consisted mainly of industry 2095, Roasted Coffee.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2044, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2045.—BLENDED AND PREPARED FLOUR

This industry comprises establishments primarily engaged in the preparation of blended flours and flour mixes from purchased flour. Establishments primarily engaged in milling flour from grain are classified in industry 2041. For a detailed list of products of industry 2045, refer to table 6A, product codes 20455 51 to 20455 79.

The code number as well as the definition of this industry was unchanged between 1967 and 1972.

Value of shipments and other receipts of the Blended and Prepared Flour Industry in 1972 totaled \$704.6 million. This included shipments of blended and prepared flour (primary products) valued at \$516.1 million, shipments of other products (secondary products) valued at \$153.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$35.3 million.

Shipments of blended and prepared flour (primary products) in 1972 represented 77 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 78 percent. Secondary products shipped by this industry in 1972 consisted mainly of food preparations, n.e.c., (\$65.1 million).

Shipments of blended and prepared flour (primary products) from establishments classified in industry 2045 in 1972 represented 65 percent (coverage ratio) of these products valued at \$796.1 million shipped by all industries. In 1967, the coverage ratio was 63 percent. Other industries shipping blended and prepared flour consisted mainly of industry 2099, Food Preparations, N.E.C., (\$12.8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at

the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2045, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2046.—WET CORN MILLING

This industry comprises establishments primarily engaged in milling corn or sorghum grain (milo) by the wet process, and producing starch, sirup, oil, sugar, and byproducts such as gluten feed and meal. Establishments primarily engaged in manufacturing starch from other vegetable sources (potato, wheat, etc.) are also included.

Establishments primarily engaged in manufacturing table sirups from corn sirup and other ingredients and those manufacturing starch-base dessert powders are classified in industry 2099, Food Preparations, N.E.C. For a detailed list of products of industry 2046, refer to table 6A, product codes 20460 03 to 20460 79.

The code number as well as the definition of this industry was unchanged between 1967 and 1972.

Value of shipments and other receipts of the Wet Corn Milling Industry in 1972 totaled \$832.3 million. This included shipments of wet corn milling (primary products) valued at \$762.6 million, shipments of other products (secondary products) valued at \$59.9 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$9.8 million.

Shipments of wet corn milling (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 84 percent. Secondary products shipped by this industry in 1972 consisted mainly of food preparations, n.e.c., (\$20 to \$50 million).

Shipments of wet corn milling (primary products) from establishments classified in industry 2046 in 1972 represented 97 percent (coverage ratio) of these products valued at \$786.7 million shipped by all industries. In 1967, the coverage ratio was 96 percent. Other industries shipping wet corn milling consisted mainly of industry 2041, Flour and Other Grain Mill Products, (\$9.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2046, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2047.—DOG, CAT, AND OTHER PET FOOD

This industry comprises establishments primarily engaged in manufacturing dog, cat, and other pet food. For a detailed list of products of industry 2047, refer to table 6A, product codes 20471 21 to 20472 69.

The definition of this industry has been revised from that used in the 1967 SIC manual. Under the 1967 SIC classification system, these data were collected in industry 2042, Prepared Feeds for Animals and Fowls, under product class 20423 and product codes 20424 61, 20424 63, 20424 65, 20424 67, and 20424 69; industry 2011, Meatpacking Plants, under product codes 20110 11 and 20118 11; and industry 2013, Sausages and Other Prepared Meats, under product code 20138 11. These changes have an insignificant effect on industry aggregates. The effect of the revisions on the data are summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." As can be seen from table 1C, all of the 2,341 establishments with 58.3 thousand total employment and \$1,714.3 million value added would have been classified in industry 2042, Prepared Feeds for Animals and Fowls. However, under the new SIC basis, 221 establishments with 14.3 thousand employees, and \$613.8 million value added are classified in the new industry 2047, Dog, Cat, and Other Pet Food.

Value of shipments and other receipts of the Dog, Cat, and Other Pet Food Industry in 1972 totaled \$1,401.9 million. This included shipments of dog, cat, and pet food (primary products) valued at \$1,264.1 million, shipments of other products (secondary products) valued at \$87.8 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$50.0 million.

Shipments of dog, cat, and other pet food (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of prepared feeds, n.e.c., (\$33.0 million).

Shipments of dog, cat, and other pet food (primary products) from establishments classified in industry 2047 in 1972 represented 87 percent (coverage ratio) of these products valued at \$1,451.1 million shipped by all industries. Other industries shipping dog, cat, and other pet food consisted mainly of industry 2048, Prepared Feeds, N.E.C., (\$111.8 million) and industry 2091, Canned and Cured Seafoods, (\$37.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and

sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2047, these establishments accounted for 0 percent of value of shipments.

INDUSTRY 2048.—PREPARED FEEDS, N.E.C.
(Short Title)

This industry comprises establishments primarily engaged in manufacturing prepared feeds for animals and fowls. Prepared feeds include poultry feed and livestock feed. This industry includes establishments primarily engaged in manufacturing certain feed ingredients and adjuncts, such as alfalfa meal and feed supplements. For a detailed list of products of industry 2048, refer to table 6A, product codes 20481 11 to 20489 35.

In 1972, the definition of this industry was revised from that used in the 1967 SIC manual. Under the 1967 SIC classification system, these data were collected in industry 2042, Prepared Feeds for Animals and Fowls, under product classes 20421 and 20422 and product codes 20424 11, 20424 22, 20424 32, 20424 34, and 20424 35.

The effect of the revisions on the data are summarized in Table 1C, "Composition of New (1972) SIC Industries Based on Old (1967) SIC." During the 1972 processing, each establishment was classified according to both the old and new SIC. As can be seen from table 1C, all of the 2,341 establishments with 58.3 thousand total employment and \$1,714.3 million value added would have been classified in industry 2042, Prepared Feeds for Animals and Fowls. On the new SIC basis, 2,120 establishments with 44.0 thousand employees and value added of \$1,100.5 million are classified

in the new industry 2048, Prepared Feeds, N.E.C. These changes have an insignificant effect on industry aggregates.

Value of shipments and other receipts of the Prepared Feeds, N.E.C., Industry in 1972 totaled \$5,037.1 million. This included shipments of prepared feeds, n.e.c., (primary products) valued at \$4,462.7 million, shipments of other products (secondary products) valued at \$191.3 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$383.1 million.

Shipments of prepared feeds, n.e.c., (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total product shipments (primary and secondary). Secondary products shipped by this industry in 1972 consisted mainly of flour and other grain mill products and blended and prepared flour (\$37.5 million) and dog, cat, and other pet foods (\$111.8 million).

Shipments of prepared feeds, n.e.c., (primary products) from establishments classified in industry 2048 in 1972 represented 96 percent (coverage ratio) of these products valued at \$4,658.2 million shipped by all industries. Other industries shipping prepared feeds, n.e.c., consisted mainly of industry 2047, Dog, Cat, and Other Pet Food, (\$33.0 million) and industry 2075, Soybean Oil Mills, (\$87.3 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2048, these establishments accounted for 3 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2041 | Industry 2043 | Industry 2044 | Industry 2045 | Industry 2046 | Industry 2047 | Industry 2048 |
|-----------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|
| 1972..... | 340 | 24 | 48 | 115 | 26 | 147 | 1,579 |
| 1967..... | 438 | 30 | 54 | 126 | 32 | - | - |
| 1963..... | 510 | 35 | 62 | 140 | 49 | - | - |

- Represents zero. (NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Data for 1967 exclude establishments producing self-rising, phosphated, and bromated flour which is now classified in industry 2041. However, for 1963, data were included.

³Comparable data for prior years not available.

⁴Comparable data to SIC 2042, Prepared Feeds for Animals and Fowls, as classified in the 1967 edition of the Standard Industrial Classification Manual.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

(NA) Not available.

¹The data for 1967 excludes establishments producing self-rising, phosphated, and bromated flour which is now classified in industry 2041.²The data for 1963 (new) includes establishments primarily producing refrigerated dough from purchased flour. Data for 1963 (old) and earlier years exclude such establishments.

TABLE 1C. Composition of New (1972) SIC Industries Based on Old (1967) SIC

The data shown under "Composition of new industry" are 1972 totals, as follows: The "new industry" line shows data for the industry as now composed; the "old industry" lines show where these data would have been included if the industry definitions had not been changed. Stated otherwise, it shows where the new industry came from. The data shown under "Totals for

industries on old SIC" are 1972 totals for the industries before revision and reflect amounts classified in the specified new industry as well as in other new industries. The relationship between the data in the first five columns and the last five columns shows the portion of the old SIC industry that was classified into the specified, newly defined industry.

| Industry | Composition of new industry | | | | | Totals for industries on old SIC | | | | |
|---|-----------------------------|---------------------------|---------------|----------------------------|--------------------|----------------------------------|---------------------------|---------------|----------------------------|--------------------|

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent

E3--30 to 39 percent

E5--50 to 59 percent

E7--70 to 79 percent

E9--90 to 99 percent

E2--20 to 29 percent

E4--40 to 49 percent

E6--60 to 69 percent

E8--80 to 89 percent

E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

TABLE 3. Detailed Statistics: 1972

(See appendix, Explanation of Terms)

| Item | Flour and other grain mill products (SIC 2041) | Cereal breakfast foods (SIC 2043) | Rice milling (SIC 2044) | Blended and prepared flour (SIC 2045) | Wet corn milling (SIC 2046) | Dog, cat, and other pet food (SIC 2047) | Prepared feeds, n.e.c. (SIC 2048) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above.
(Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|--|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

(D) Withheld to avoid disclosing figures for individual companies.

(2) Less than half of the unit of measurement shown.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | | |
|--------------|--|----------------------|----------------------|-----------------------|--------------------------------|--|-------------------------------------|-----------------------------|--------------------------------|-------------------|----|
| | | Total | Primary products | Secondary products | Miscel- laneous receipts | Primary product special- ization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio | |

- Represents zero.

¹Because of similarity of the products in industry 2041 and those of industry 2045, it is desirable for some purposes to combine the statistics.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| 20480 02 | Prepared animal feeds, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | ¹³ 160.0 | (X) | ¹³ 71.5 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. ¹Revised.

Footnotes continued on next page.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Footnotes for table 6A)—Continued

¹The Census Bureau publishes detailed monthly production data for flour milling products in Current Industrial Reports series M20A, "Flour Milling Products." Because of the reporting of production by individual companies on the CIR report and the reporting of shipments in the census report, the data shown in this report differ from that published in the current survey. The data differ also because of individual companies reporting on a fiscal year basis for the census and a calendar year basis for the current survey. For comparative purposes, the summary figures as published in the monthly current industrial reports series are shown below:

| Code | Product | Unit of measure | 1972 production as shown in current survey M20A | 1972 shipments as shown in census of manufactures |
|----------------------|--------------------------------------|--------------------|---|---|
| 20411 05 20411 98 | Wheat flour, except flour mixes..... | 1,000 sacks (cwt). | 250,441 | 251,301 |
| 20412 13 | Wheat mill feed..... | 1,000 short tons | 4,303 | 4,245 |
| 20416 11 | Rye flour..... | 1,000 sacks (cwt). | 2,248 | 2,623 |

²Data for product code 20411 61 are included with product code 20411 98 to avoid disclosing figures for individual companies.

³Quantity estimated based on the quantity-value relationship for other products in the product class.

⁴Data for product codes 20415 59 and 20455 59 are combined with 20415 58 and 20455 58 to avoid disclosing figures for individual companies.

⁵Data for product codes 20415 67 and 20455 67 are combined with 20415 66 and 20455 66 to avoid disclosing figures for individual companies.

⁶Data for product codes 20415 71, 20455 71, 20415 73, and 20455 73 are combined with 20415 79 and 20455 79 to avoid disclosing figures for individual companies.

⁷For 1972, the definitions of the dextrose equivalent are changed in the following manner:

| 1972 code | Description | 1967 code | Description |
|-----------|---|---------------|--|
| 20460 03 | Type I (20 dextrose equivalent up to 38).... | 20460 08 | Low (28 to 37 dextrose equivalent) |
| 20460 04 | Type II (38 dextrose equivalent up to 58)... | 20460 12 | Regular (38 to 47 dextrose equivalent) |
| | | 20460 13 | Intermediate (48 to 57 dextrose equivalent) |
| 20460 05 | Type III (58 dextrose equivalent up to 73)... | 20460 14 (pt) | High (58 to 67 dextrose equivalent) |
| 20460 07 | Type IV (73 dextrose equivalent and above)... | 20460 15 (pt) | Extra high (68 and over dextrose equivalent) |

⁸Quantity data are withheld due to duplication arising from shipment between establishments in the same industry classification.

⁹Included under product code 20471 total to avoid disclosing figures for individual companies. In some cases, figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher-level totals or from related figures.

¹⁰In 1967, classified in product code 20110 13.

¹¹In 1967, classified in product codes 20118 15 and 20138 15.

¹²Generally, data for these establishments were estimated from administrative records rather than collected from respondents. However, separate information on pet food manufacturers were not collected in this manner and, therefore, were not separately available. Data for these establishments are included in product codes 20480 00 and 20480 02.

¹³Includes an unknown amount for pet food manufacturers.

¹⁴The 1967 data for old product codes 20421 00 and 20422 00 were included in the n.s.k. category. Product class n.s.k. data were not available for 1972 because of the restructuring of the product classes for this industry. Additionally, these data included estimates for pet food manufacturers classified in industry 2047 who did not completely identify their products.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(X) Not applicable. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²The product classes 20413 and 20416 were revised to include all dry corn meal products in 20413. The following products were transferred from 20416 for 1963: \$48.0 million of corn grits and hominy, except for brewers' use; \$38.5 million of corn grits and flakes for brewers' use; and \$31.4 million of hominy feed and other dry corn milling byproducts. The data for the years 1958 and 1966 have not been corrected and, therefore, are not comparable to 1967 and 1963.

³Because in 1963 a substantial number of flour mills included their shipments of phosphates and self-rising flour with white family flour, we have revised the 1963 and 1958 data so that phosphated and self-rising flour are included in product class 20411, Wheat flour, except blended or prepared, and excluded from product class 20415, Prepared flour and flour mixes.

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(Z) Less than half of the unit of measurement shown.

¹This item represents the total cost of materials for establishments that did not report materials data including a large number of small feed manufactures. For 1972 and 1967, this includes estimates for companies that were not mailed report forms.

²Included in material code 970099.

TABLE 7B. Fuels and Electric Energy Consumed: 1971 and 1967

(See appendix, Explanation of Terms)

EXPLANATORY TEXT

BAKERY PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2051—Bread and Other Bakery Products, Except Cookies and Crackers*

2052—Cookies and Crackers

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2051.—BREAD, CAKE, AND RELATED PRODUCTS (Short Title)

This industry comprises establishments primarily engaged in manufacturing bread, cakes, and other "perishable" bakery products. Establishments primarily engaged in producing "dry" bakery products such as biscuits, crackers, and cookies are classified in industry 2052.

Establishments producing bakery products primarily for direct sale on the premises to household consumers are classified in retail trade industry 5462. However, establishments manufacturing bakery products for sale primarily for home service delivery or through one or more nonbaking retail outlets are included in this industry. For a detailed list of products of industry 2051, refer to table 6A, product codes 20511 11 to 20517 11.

*Note that the "short title" for this industry is used throughout the report.

The code number and definition of this industry were unchanged between 1972 and 1967.

The Standard Industrial Classification does not provide for separate industry data for the different types of bakeries included in industry 2051. In order to provide additional detail to reflect the differences among bakeries; i.e., interrelationships of value and type of bakery products shipped, materials used, value added by manufacture, employment, etc., industry 2051 has been divided into four subindustries described below.

Wholesale Bakeries—Bakeries selling chiefly at wholesale to other business concerns, including grocers, restaurants, hotels, institutions, and other establishments buying the products for resale. The principal products of this group of establishments are bread, bread-type rolls, and cakes. The sales values reported are the wholesale selling prices received by the manufacturer.

Grocery Chain Bakeries—Bakeries owned and operated by grocery chain-store companies who distribute their product through retail grocery stores owned by the same company. The sales values reported by this group of establishments are based on a transfer price which is equivalent to the wholesale price.

Home Service Bakeries—Bakeries selling chiefly through retail home-service routes. The values were reported generally at retail prices although, in a few instances, transfers of goods between establishments of some of the larger companies were expressed in terms of wholesale prices.

Retail Multioutlet Bakeries—Retail bakeries selling chiefly through nonbaking outlets operated by the same company. Statistics relating to the nonbaking outlets are not included except in those cases where one retail unit was at the same location as the bakery and included as a part of the manufacturing establishment. Bakeries operated by restaurant chains are included in this subindustry. The value of products reported is largely based on the retail prices received for the product. However, some of the larger concerns reported a "transfer value," the nearest available equivalent to a wholesale price.

Value of shipments and other receipts of the Bread, Cake, and Related Products Industry in 1972 totaled \$6,152.6 million. This included shipments of bread, cake, and related products (primary products) valued at \$5,121.9 million, shipments of other products (secondary products) valued at \$79.9

million, and miscellaneous receipts (mainly resales) of \$950.8 million.

This industry's shipments of bread, cake, and related products (primary products) in 1972 represented 98 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of cookies and crackers (\$35.6 million), frozen specialties (\$28.2 million), and food preparations, n.e.c., (\$13.6 million).

Shipments of bread, cake, and related products (primary products) from establishments classified in industry 2051 in 1972 represented 99 percent (coverage ratio) of these products valued at \$5,180.8 million shipped by all industries. In 1967, the coverage ratio was also 99 percent. Other industries shipping bread, cake, and related products consisted mainly of industries 2026, Fluid Milk (over \$2 million), and 2038, Frozen Specialties (\$5 to \$10 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2051, these establishments accounted for 7 percent of value of shipments.

INDUSTRY 2052.—COOKIES AND CRACKERS

This industry comprises establishments primarily engaged in manufacturing cookies, crackers, pretzels, and similar "dry" bakery products. Establishments primarily engaged in producing "perishable" bakery products are classified in industry

2051. For a detailed list of products of industry 2052, refer to table 6A, product codes 20521 23 to 20522 35.

The code number and the definition of this industry were unchanged between 1972 and 1967.

Value of shipments and other receipts of the Cookies and Crackers Industry in 1972 totaled \$1,763.5 million. This included shipments of cookies and crackers (primary products) valued at \$1,623.0 million, shipments of other products (secondary products) valued at \$41.6 million, and miscellaneous receipts (mainly resales) of \$98.9 million.

Shipments of cookies and crackers (primary products) in 1972 represented 98 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of bread, cake, and related products (\$20 to \$50 million), confectionery products (\$6.2 million), and food preparations, n.e.c., (\$10.8 million).

Shipments of cookies and crackers (primary products) from establishments classified in industry 2052 in 1972 represented 95 percent (coverage ratio) of these products valued at \$1,713.3 million shipped by all industries. In 1967, the coverage ratio was 93 percent. Other industries shipping cookies and crackers consisted mainly of industry 2065, Confectionery Products, (\$25.1 million); and industry 2099, Food Preparation, N.E.C., (\$13.8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2052, these establishments accounted for 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |

| 1958 Census | 339 | 206 | 44.5 | 179.8 | 34.3 | 68.5 | 122.7 | 523.3 | 456.8 | 982.5 | 15.5 | (NA) | 58.6 | 97 | 95 |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2051 | Industry 2052 |
|-----------|---------------|---------------|
| 1972..... | 2,801 | 257 |
| 1967..... | 3,445 | 286 |
| 1963..... | 4,339 | 286 |

The report form for the bakery industry includes a check-box which is used to identify single-shop retail bakeries. These bakeries are classified as retailers and are included in the census of business. To the extent that the respondents completed this inquiry, all such retailers were excluded from the 1972, 1967, and 1963 censuses of manufactures. However, for 1958, there were about 2,000 small establishments reporting on "short forms" that were not subjected to the same kind of analysis as in 1972, 1967, and 1963. For 1958, this group had 18,884 employees and \$119,800 thousand adjusted value added. A review of these 1958 report forms indicates that 846 single-shop bakeries with 2,890 employees were incorrectly included as wholesale bakeries in the 1958 census.

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar of shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for those small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

TABLE 4. General Statistics, by Employment Size of Establishment: 1972—Continued

(Footnotes for table 4)

Note The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|-----------|--|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |
| | | (million dollars) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. B & C (percent) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. F (percent) |
| | | A | B | C | D | E | F | G | H | I |
| 2051 | Bread, cake, and related products.....1972.. | 6,152.6 | 5,121.9 | 79.9 | 950.8 | 98 | 5,180.8 | 5,121.9 | 58.9 | 99 |
| |1967.. | 5,102.6 | 4,273.9 | 110.6 | 718.1 | 97 | 4,320.6 | 4,273.9 | 46.7 | 99 |

| |1967.. | 1,363.8 | 1,253.0 | 39.6 | 71.2 | 97 | 1,349.5 | 1,253.0 | 96.5 | 93 |

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Bread, cake, and related products (SIC 2051) | | | | | Cookies and crackers (SIC 2052) | Other industries |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

Footnotes continued on next page.

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Footnotes for table 6A)--Continued

- Represents zero. (X) Not applicable.

¹Quantity estimated based on the quantity-value relationship for other products of the product class or industry.²For 1967, product code 20512 00 was included in code 20511 00.³Biscuit mixes, made from flour milled in same establishment and made from purchased flour are classified in product codes 20415 56 and 20455 56, respectively. Likewise, refrigerated doughs made from flour milled in same establishment and from purchased flour are classified in product codes 20415 71 and 20455 71, respectively.⁴The quantity data are withheld due to significant reporting problems, primarily the result of inconsistencies in the unit of measure listed.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |
|--|---|-------|--|---|-------|
| | 1972 | 1967 | | 1972 | 1967 |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

- Represents zero. (NA) Not available.

¹The individual product codes included in this class of product for 1972 differ significantly from prior years. Products shifting into or out of this class of product represent more than 15 percent of the total shipments at the U.S. level.

²Product class code 20512 is a new product class for 1972. In 1967 and prior years, the figures for this product class were included in code 20511.

(NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²The individual product codes included in this class of product for 1972 differ significantly from prior years. Products shifting into or out of this class of product represent more than 15 percent of the total shipments value at the U.S. level.

³Product class code 20512, "Rolls (bread-type, including brown-and-serve), stuffing, and crumbs," is a new product class for 1972. During the years 1958 to 1971, the figures for this product class were included in product class code 20511.

EXPLANATORY TEXT

SUGAR AND CONFECTIONERY PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2061—Cane Sugar, Except Refining Only*
- 2062—Cane Sugar Refining
- 2063—Beet Sugar
- 2065—Candy and Other Confectionery Products*
- 2066—Chocolate and Cocoa Products
- 2067—Chewing Gum

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2061.—RAW CANE SUGAR (Short Title)

This industry comprises establishments primarily engaged in manufacturing raw sugar, sirup, or finished (granulated or clarified) cane sugar from sugarcane. Establishments primarily engaged in refining sugar from purchased raw cane sirup or sugar sirups are classified in industry 2062. For a detailed list of products of industry 2061, refer to table 6A, product codes 20610 11 to 20610 81.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Raw Cane Sugar Industry in 1972 totaled \$427.1 million. This included

shipments of raw cane sugar and byproducts (primary products) valued at \$422.3 million, shipments of other products (secondary products) valued at \$2.1 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$2.7 million.

Shipments of raw cane sugar and byproducts (primary products) in 1972 represented 100 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 100 percent. Secondary products shipped by this industry in 1972 consisted mainly of dog, cat, and other pet food, and other secondary products.

Shipments of raw cane sugar and byproducts (primary products) from establishments classified in industry 2061 in 1972 represented 96 percent (coverage ratio) of these products valued at \$440.1 million shipped by all industries. In 1967, the coverage ratio was 100 percent. Other industries shipping raw cane sugar and byproducts consisted mainly of industry 2062, Cane Sugar Refining, (\$10 to \$20 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2061, these establishments accounted for 8 percent of value of shipments.

INDUSTRY 2062.—CANE SUGAR REFINING

This industry comprises establishments primarily engaged in refining purchased raw cane sugar and sugar sirup. For a detailed list of products of industry 2062, refer to table 6A, product codes 20620 09 to 20620 75.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Cane Sugar Refining Industry in 1972 totaled \$1,742.7 million. This included shipments of refined sugarcane and byproducts (primary products) valued at \$1,703.4 million, shipments of other products (secondary products) valued at \$14.9 million, and miscellaneous receipts (mainly resales) of \$24.4 million.

Shipments of refined cane sugar and byproducts (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and

*Note that the "short title" for this industry is used throughout the report.

secondary). The industry specialization ratio in 1967 was 100 percent. Secondary products shipped by this industry in 1972 consisted mainly of raw cane sugar and byproducts (\$10 to \$20 million).

Shipments of refined cane sugar and byproducts (primary products) from establishments classified in industry 2062 in 1972 represented 98 percent (coverage ratio) of these products valued at \$1,746.4 million shipped by all industries. In 1967, the coverage ratio was 100 percent. Other industries shipping refined cane sugar and byproducts consisted mainly of industry 2087, Flavoring Extracts and Sirups, N.E.C., (\$20 to \$50 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2062, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2063.—BEET SUGAR

This industry comprises establishments primarily engaged in manufacturing sugar from sugar beets. For a detailed list of products of industry 2063, refer to table 6A, product codes 20630 07 to 20630 87.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Beet Sugar Industry in 1972 totaled \$880.2 million. This included shipments of beet sugar (primary products) valued at (\$500 to \$1,000 million), shipments of other products (secondary products) valued at (\$5 to \$10 million), and miscellaneous receipts of \$8.8 million.

Shipments of beet sugar (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 100 percent. Secondary products shipped by this industry in 1972 consisted mainly of raw cane sugar and byproducts, (\$2 to \$5 million).

Shipments of beet sugar (primary products) from establishments classified in industry 2063 in 1972 represented 100 percent (coverage ratio) of these products valued at \$866.4 million shipped by all industries. In 1967, the coverage ratio was also 100 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small

number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2063, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2065.—CONFECTIONERY PRODUCTS (Short Title)

This industry comprises establishments primarily engaged in manufacturing candy, including chocolate candy, salted nuts, other confections, and related products. Establishments primarily engaged in manufacturing solid chocolate bars are classified in industry 2066 and chewing gum in industry 2067. Establishments primarily engaged in manufacturing confectionery for direct sale on the premises are classified in industry 5441, and those primarily engaged in shelling and roasting nuts are classified in industry 5145. For a detailed list of products of industry 2065, refer to table 6A, product codes 20651 00 to 20658 79.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from 2071 to 2065.

Value of shipments and other receipts of the Confectionery Products Industry in 1972 totaled \$2,472.5 million. This included shipments of confectionery products (primary products) valued at \$2,213.8 million, shipments of other products (secondary products) valued at \$118.6 million, and miscellaneous receipts (mainly resales) of \$140.1 million.

Shipments of confectionery products (primary products) in 1972 represented 95 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of cookies and crackers, (\$25.1 million) and chewing gum, (\$10 to \$20 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 5A. Approximately 18 percent of the total industry shipments are represented by plants specializing in bar goods (20651); 31 percent in package goods (20653); and 27 percent in salted nuts and other confectionery-type products (20658).

Shipments of confectionery products (primary products) from establishments classified in industry 2065 in 1972 represented 95 percent (coverage ratio) of these products valued at \$2,334.8 million shipped by all industries. In 1967, the coverage ratio was 94 percent. Other industries shipping

confectionery products consisted mainly of industry 2066, Chocolate and Cocoa Products, (\$41.4 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2065, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2066.—CHOCOLATE AND COCOA PRODUCTS

This industry comprises establishments primarily engaged in shelling, roasting and grinding cocoa beans for the purpose of making chocolate liquor, from which cocoa powder and cocoa butter are derived; and in the further manufacture of solid chocolate bars and chocolate coatings. Establishments primarily engaged in manufacturing products, except candy, from purchased chocolate and cocoa are classified in industry 2099, and chocolate candy in industry 2065. For a detailed list of products of industry 2066, refer to table 6A, product codes 20661 12 to 20668 96.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from 2072 to 2066.

Value of shipments and other receipts of the Chocolate and Cocoa Products Industry in 1972 totaled \$735.5 million. This included shipments of chocolate and cocoa products (primary products) valued at \$672.2 million, shipments of other products (secondary products) valued at \$50.4 million, and miscellaneous receipts (mainly resales) of \$12.9 million.

Shipments of chocolate and cocoa products (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 96 percent. Secondary products shipped by this industry in 1972 consisted mainly of confectionery products (\$41.4 million).

Shipments of chocolate and cocoa products (primary products) from establishments classified in industry 2066 in 1972 represented 75 percent (coverage ratio) of these products valued at \$895.7 million shipped by all industries. In 1967, the coverage ratio was also 75 percent. Other industries shipping chocolate and cocoa products consisted mainly of industry 2065, Confectionery Products, (\$114.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2066, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2067.—CHEWING GUM

This industry comprises establishments primarily engaged in manufacturing chewing gum or chewing gum base. For a detailed list of products of industry 2067, refer to table 6A, product codes 20670 12 to 20670 15.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from 2073 to 2067.

Value of shipments and other receipts of the Chewing Gum Industry in 1972 totaled \$382.6 million. This included shipments of chewing gum (primary products) valued at \$337.3 million, shipments of other products (secondary products) valued at \$38.9 million, and miscellaneous receipts (mainly resales) of \$6.4 million.

Shipments of chewing gum (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 86 percent. Secondary products shipped by this industry in 1972 consisted mainly of confectionery products.

Shipments of chewing gum (primary products) from establishments classified in industry 2067 in 1972 represented 88 percent (coverage ratio) of these products valued at \$384.8 million shipped by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping chewing gum consisted mainly of industry 2065, Confectionery Products.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2067, these establishments accounted for 0 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|---|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2061 | Industry 2062 | Industry 2063 | Industry 2065 | Industry 2066 | Industry 2067 |
|-----------|------------------|------------------|------------------|------------------|------------------|------------------|
| 1972..... | 61 | 22 | 16 | 917 | 39 | 15 |
| 1967..... | 61 | 22 | 15 | 1,091 | 27 | 19 |
| 1963..... | 50 | 16 | 11 | 1,142 | 24 | 20 |

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar of shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

TABLE 2. General Statistics by Geographic Area: 1972 and 1967—Continued

(Footnotes for table 2)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E10--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

²The 1972 definitions of these industries are unchanged from the 1967 classification systems. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

- Represents zero. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

²The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

³The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. General Statistics, by Employment Size of Establishment: 1972—Continued

Footnotes for table 4

Note: The payroll and sales data for small establishments generally single-unit companies with less than 10 employees were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E10--100 percent

D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. 7 Less than half of the unit of measurement shown under 50 thousand dollars or man-hours; under 50 employees.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

²The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments, and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |

D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|---|--------------------|-------------------|--------------------|------------------------|--------------------------------------|------------------------------------|-----------------------|--------------------------|-------------------------------|
| | | Total | Primary products | Secondary products | Miscellaneous receipts | Primary product specialization ratio | Total, made in all industries | Made in this industry | Made in other industries | Coverage ratio |
| | | (million dollars) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. B & C (percent) | (million dollars) | (million dollars) | (million dollars) | Col. B Col. F (percent) |
| | | A | B | C | D | E | F | G | H | I |
| 2061- | Raw cane sugar.....1972.. | 406.5 | 401.7 | 2.1 | 2.7 | 99 | 419.5 | 401.7 | 17.8 | 96 |
| |1967.. | 368.5 | 362.5 | 1.4 | 4.6 | 100 | 363.5 | 362.5 | 1.0 | 100 |
| 2062- | Cane sugar refining.....1972.. | 1,742.7 | 1,703.4 | 14.9 | 24.4 | 99 | 1,746.4 | 1,703.4 | 43.0 | 98 |

| |1967.. | 560.7 | (D) | (D) | 9.6 | 100 | 550.8 | (D) | (D) | 100 |
| 2065- | Confectionery products ¹1972.. | 2,472.5 | 2,213.8 | 118.6 | 140.1 | 95 | 2,334.8 | 2,213.8 | 121.0 | 95 |
| |1967.. | 1,870.2 | 1,712.0 | 61.8 | 96.5 | 97 | 1,812.7 | 1,712.0 | 100.7 | 94 |
| 2066- | Chocolate and cocoa products ¹1972.. | 735.5 | 673.0 | 50.4 | 12.9 | 93 | ² 896.5 | 673.0 | ² 223.5 | 75 |
| |1967.. | 520.5 | 497.9 | 19.3 | 3.1 | 96 | ² 666.6 | 497.9 | ² 168.7 | 75 |
| 2067- | Chewing gum ¹1972.. | 382.6 | 337.3 | 38.9 | 6.4 | 90 | 384.8 | 337.3 | 47.3 | 88 |
| |1967.. | 303.7 | 258.7 | 40.8 | 4.2 | 86 | 271.9 | 258.7 | 13.2 | 95 |

¹The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

²Includes confectionery-type chocolate made from purchased chocolate (see table 6A, product codes 20657 81 to 20657 87) and "other chocolate products" (cooking chocolate, chocolate sirup made from purchased chocolate) (see table 6A, product codes 20998 11 to 20998 96). If the coverage ratio were confined exclusively to industry 2066, it would have been 93 percent for 1972 and 98 percent for 1967 since establishments in industry 2066 are almost exclusively engaged in making chocolate from cocoa beans.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Raw cane sugar (SIC 2061) | Cane sugar refining (SIC 2062) | Beet sugar (SIC 2063) | Confectionery products (SIC 2065) ¹ | Chocolate and cocoa products (SIC 2066) ¹ | Chewing gum (SIC 2067) ¹ | Other industries |

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972—Continued

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| Product code | Industry, class of products, and miscellaneous receipts | All industries | Raw cane sugar (SIC 2061) | Cane sugar refining (SIC 2062) | Beet sugar (SIC 2063) | Confectionery products (SIC 2065) ¹ | Chocolate and cocoa products (SIC 2066) ¹ | Chewing gum (SIC 2067) ¹ | Other industries |

Note: Data shown parenthetically are ranges expressed in millions of dollars.

- Represents zero. (X) Not applicable. (Z) Less than half of the unit of measurement shown.

¹The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

²Includes \$114.7 million for product class 20657 81 to 20657 87, confectionery-type chocolate (made from purchased chocolate) which is also shown in product class 20662.

³Includes \$38.6 million for product codes 20998 11 to 20998 96, chocolate and cocoa products (made from purchased chocolate or cocoa).

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix, Explanation of Terms "Value of shipments")

| 20660 00 | Chocolate and cocoa products, n.s.k..... | ...do..... | 8.1 | 5.8 | 32.5 | 10.7 |
| 2067- -- | CHEWING GUM, TOTAL ⁵ | | 482.0 | 384.8 | (X) | 271.9 |
| | Chewing Gum and Chewing Gum Base: | | | | | |
| | Chewing gum, not medicated: | | | | | |
| 20670 12 | Nondietetic..... | Million lb.... | 395.2 | 313.6 | 325.2 | 236.0 |
| 20670 13 | Dietetic..... | ...do..... | (D) | (D) | 3.2 | 6.8 |
| 20670 15 | Chewing gum base..... | ...do..... | (D) | (D) | (NA) | 24.3 |
| 20670 00 | Chewing gum, n.s.k., for companies with 10 employees or more. (See note.)..... | | - | - | (X) | 4.8 |
| 20607 02 | Chewing gum, n.s.k., for companies with less than 10 employees. (See note.)..... | | - | .3 | | |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

^r Revised.

¹1967 data for product code 20610 31 are included with product code 20610 00 in order to avoid disclosing figures for individual companies.

²Quantity estimated based on the reported quantity-value relationship for other products of the industry.

³1972 and 1967 data for product code 20620 21 were included in product code 20620 00 to avoid disclosing figures for individual companies.

⁴Certain data for confectionery products are collected and published monthly, with Annual Summary, in Current Industrial Reports Series MA-20D. Corresponding data for the 1972 MA-20D survey and the 1972 census are shown below:

| Product class | Item | MA-20D | | 1972 census | |
|--|---|-----------|------------|-------------|------------|
| | | Quantity | Value | Quantity | Value |
| | | (mil.lb.) | (mil.dol.) | (mil.lb.) | (mil.dol.) |

| 20654 pt. 20655 pt. 20657 pt. 20662 pt. | | | | | |
| 2065- -- | Candy and other confectionery products, n.s.k.. | 560.1 | 247.3 | (X) | (X) |

⁵The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

⁶Excludes confectionery-type chocolate made by chocolate manufacturers (see product class 20662) and chocolate and cocoa products.

⁷The data for confectionery-type chocolate made from purchased chocolate are included in both product classes 20657 and 20662.

⁸Includes an unknown amount of milk chocolate with rice.

⁹The data for "Other Chocolate and Cocoa Products" made from purchased chocolate are included in both product classes 20668 and 20998.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

¹The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071 and 2072 to 2065 and 2066, respectively.

TABLE 6C. Product Classes—Quantity and Value Shipped by All Manufacturing Establishments:

(X) Not applicable. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²Excludes Alaska and Hawaii to avoid disclosing individual company figures.

³The 1972 definitions of these industries are unchanged from the 1967 classification system. However, the SIC numbers have been changed from 2071, 2072, and 2073 to 2065, 2066, and 2067, respectively.

⁴Data for all years exclude confectionery-type chocolate and other chocolate and cocoa products not made in chocolate plants.

EXPLANATORY TEXT

FATS AND OILS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2074—Cottonseed Oil Mills

2075—Soybean Oil Mills

2076—Vegetable Oil Mills, Except Corn, Cottonseed, and Soybean*

2077—Animal and Marine Fats and Oils

2079—Shortening, Table Oils, Margarine, and Other Edible Fats and Oils, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

This group of industries comprises establishments primarily engaged in extracting and refining vegetable or animal fats and oils and in producing margarine, shortening, and cooking and salad oils. Mills engaged in extracting oils frequently engage in further processing such as refining (alkali or caustic treatment of oils), hydrogenating, blowing, blending, and fractionating of inedible oils. However, most refined oils (alkali or caustic treated) are produced by establishments primarily engaged in producing products which contain a large proportion of fats and oils, such as shortening, margarine, paint, soap, etc. Plants which produce refined oil for use in the same plant in shortening or margarine are classified in industry 2079; for use in medicinal chemicals in industry 2833, Medicinals and Botanicals; in soap in industry 2841, Soap and

Other Detergents; in manufacturing sulfonated oils in industry 2843, Surface Active Agents; in paints in industry 2851, Paints and Allied Products; in distilling or refining essential oils in industry 2899, Chemical Preparations, N.E.C. Establishments primarily engaged in rendering lard or edible tallow are classified in industry 2011, Meatpacking Plants.

The vegetable oil mill extraction process yields crude oil and byproduct cake and meal. The value of shipments of the byproducts represents a significant portion of the total shipments of products primary to each of the industries in this group, ranging from 70 percent for the products primary to industry 2075, Soybean Oil Mills, to 22 percent for industry 2076, Vegetable Oil Mills, N.E.C., in 1972. Because the vegetable oil crushing equipment may be used for many varieties of seeds or beans, it is also characteristic for many of these plants not to specialize exclusively in the crushing of a specific oil. Thus, some cottonseed oil mills also crush peanuts or soybeans, and soybean oil mills may also crush flaxseed. Table 5A partially describes the extent of this diversification.

Monthly data relating to receipts of raw materials and quantities crushed are published by the Census Bureau in Current Industrial Reports, series M20J, Vegetable Oil Crushers.

Monthly information regarding production of refined oils and the consumption of fats and oils by class of product appears in Current Industrial Reports, series M20K, Production, Consumption in Selected Products: Factory and Warehouse Stocks. For most of the products shown in table 6A, the production figures are in rather close agreement with those compiled and published each month in the Current Industrial Reports. Differences are mainly attributable to fiscal-year reporting by a number of large companies in the 1972 Census of Manufactures, variations in reporting, and differences in coverage.

INDUSTRY 2074.—COTTONSEED OIL MILLS

This industry comprises establishments primarily engaged in manufacturing cottonseed oil and byproduct cake, meal, and linters. Establishments primarily engaged in refining cottonseed oil into edible cooking oils are classified in industry 2079. For a detailed list of products of industry 2074, refer to table 6A, product codes 20741 11 to 20744 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from code number 2091 to code number 2074.

*Note that the "short title" for this industry is used throughout the report.

Value of shipments and other receipts of the Cottonseed Oil Mills Industry in 1972 totaled \$458.7 million. This included shipments of cottonseed oil mill products (primary products) valued at \$363.4 million, shipments of other products (secondary products) valued at \$64.5 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$30.8 million.

Shipments of cottonseed oil mill products (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 85 percent. Secondary products shipped by this industry in 1972 consisted mainly of soybean oil mill (\$34.6 million) and vegetable oil mill products (\$11.7 million).

Shipments of cottonseed oil mill products (primary products) from establishments classified in industry 2074 in 1972 represented 88 percent (coverage ratio) of these products valued at \$410.7 million shipped by all industries. In 1967, the coverage ratio was 85 percent. Other industries shipping cottonseed oil mill products consisted mainly of industry 2075, Soybean Oil Mills (\$16.2 million), and 2079, Shortening and Cooking Oils (\$23.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2074, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2075.—SOYBEAN OIL MILLS

This industry comprises establishments primarily engaged in manufacturing soybean oil and byproduct cake and meal. Establishments primarily engaged in refining soybean oil into edible cooking oils are classified in industry 2079. For a detailed list of products of industry 2075, refer to table 6A, product codes 20751 13 to 20752 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from code number 2092 to code number 2075.

Value of shipments and other receipts of soybean oil mills in 1972 totaled \$3,357.2 million. This included shipments of soybean oil mill products (primary products) valued at \$2,558.5 million, shipments of other products (secondary products) valued at \$443.4 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$355.3 million.

Shipments of soybean oil mill products (primary products) in 1972 represented 85 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 86 percent. Secondary products shipped by this industry in 1972 consisted mainly of cottonseed oil mill products (\$16.2 million) and shortening and cooking oils (\$281.6 million).

Shipments of soybean oil mill products (primary products) from establishments classified in industry 2075 in 1972 represented 96 percent (coverage ratio) of these products valued at \$2,652.1 million shipped by all industries. In 1967, the coverage ratio was also 96 percent. Other industries shipping soybean oil mill products consisted mainly of industry 2074, Cottonseed Oil Mills (\$34.6 million), and industry 2079, Shortening and Cooking Oils (\$46.8 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2075, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2076.—VEGETABLE OIL MILLS, N.E.C. (Short Title)

This industry comprises establishments primarily engaged in manufacturing vegetable oils and byproduct cake meal, except corn, cottonseed, and soybean. Establishments primarily engaged in refining vegetable oils into edible cooking oils are classified in industry 2079, and those refining these oils for medicinal purposes in industry 2833. For a detailed list of products of industry 2076, refer to table 6A, product codes 20761 13 to 20763 98.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from code number 2093 to code number 2076.

Value of shipments and other receipts of the Vegetable Oil Mills, N.E.C., Industry in 1972 totaled \$252.2 million. This included shipments of vegetable oil mill products, n.e.c., (primary products) valued at \$166.3 million, shipments of other products (secondary products) valued at \$13.2 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$72.7 million.

Shipments of vegetable oil mill products, n.e.c., (primary products) in 1972 represented 93 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 80 percent.

Secondary products shipped by this industry in 1972 consisted mainly of cottonseed oil mill products and soybean oil mill products.

Shipments of vegetable oil mill products, n.e.c., (primary products) from establishments classified in industry 2076 in 1972 represented 63 percent (coverage ratio) of these products valued at \$263.4 million shipped by all industries. In 1967, the coverage ratio was 74 percent. Other industries shipping vegetable oil mill products, n.e.c., consisted mainly of industry 2074, Cottonseed Oil Mills (\$11.7 million), and industry 2079, Shortening and Cooking Oils (\$41.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2076, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2077.—ANIMAL AND MARINE FATS AND OILS

This industry comprises establishments primarily engaged in manufacturing animal oils, including fish oil and other marine animal oils, and byproduct meal; and those rendering inedible grease and tallow from animal fat, bones, and meat scraps. Establishments primarily engaged in manufacturing lard and edible tallow and stearin are classified in SIC group 201; those refining marine oils for medicinal purposes in industry 2833; and those manufacturing fatty acids in industry 2899. For a detailed list of products of industry 2077, refer to table 6A, product codes 20772 17 to 20773 79.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from code number 2094 to code number 2077.

Value of shipments and other receipts of the Animal and Marine Fats and Oils Industry in 1972 totaled \$764.6 million. This included shipments of animal and marine fats and oils (primary products) valued at \$667.4 million, shipments of other products (secondary products) valued at \$44.9 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$52.3 million.

Shipments of animal and marine fats and oils (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 94 percent. Secondary products shipped by this industry in 1972

consisted mainly of meatpacking plant products (\$15.9 million).

Shipments of animal and marine fats and oils (primary products) from establishments classified in industry 2077 in 1972 represented 68 percent (coverage ratio) of these products valued at \$977.1 million shipped by all industries. In 1967, the coverage ratio was 67 percent. Other industries shipping animal and marine fats and oils consisted mainly of industry 2011, Meatpacking Plants (\$246.8 million), and industry 2079, Shortening and Cooking Oils (\$19.2 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2077, these establishments accounted for 2 percent of value of shipments.

INDUSTRY 2079.—SHORTENING AND COOKING OILS (Short Title)

This industry comprises establishments primarily engaged in manufacturing shortening, table oils, margarine, and other edible fats and oils, not elsewhere classified, by further processing of purchased animal and vegetable oils. Establishments primarily engaged in producing corn oil are classified in industry 2046. For a detailed list of products of industry 2079, refer to table 6A, product codes 20791 12 to 20792 01.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from code number 2096 to code number 2079.

Value of shipments and other receipts of the Shortening and Cooking Oils Industry in 1972 totaled \$2,068.1 million. This included shipments of shortening and cooking oils (primary products) valued at \$1,774.2 million, shipments of other products (secondary products) valued at \$220.3 million, and miscellaneous receipts (mainly contract work on materials owned by others) of \$73.6 million.

Shipments of shortening and cooking oils (primary products) in 1972 represented 89 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 87 percent. Secondary products shipped by this industry in 1972 consisted mainly of cottonseed oil mill products (\$23.2 million), soybean oil mill products (\$46.8 million), vegetable oil mill products, n.e.c., (\$41.6 million), and animal and marine fats and oils (\$19.2 million).

EXPLANATORY TEXT—Continued

Shipments of shortening and cooking oils (primary products) from establishments classified in industry 2079 in 1972 represented 78 percent (coverage ratio) of these products valued at \$2,274.5 million shipped by all industries. In 1967, the coverage ratio was 86 percent. Other industries shipping shortening and cooking oils consisted mainly of industry 2011, Meatpacking Plants (\$20.1 million); industry 2035, Pickles, Sauces, and Salad Dressings (\$94.7 million); and industry 2075, Soybean Oil Mills (\$281.6 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2079, these establishments accounted for less than 1 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|---|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|

| 1958 Census..... | 105 | 80 | 12.5 | 71.0 | 8.6 | 18.4 | 44.2 | 221.5 | 1,016.5 | 1,239.1 | 12.4 | (NA) | 101.7 | 93 | 90 |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2074 | Industry 2075 | Industry 2076 | Industry 2077 | Industry 2079 |
|-----------|---------------|---------------|---------------|---------------|---------------|
| 1972..... | 74 | 54 | 28 | 402 | 64 |
| 1967..... | 91 | 60 | 34 | 477 | 63 |
| 1963..... | 115 | 68 | 39 | 516 | 65 |

- Represents zero. (NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown.

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|---|----------------------------|-------------------|------------------------------|--------------------|-------------------------|----------------------------|---|--|---|--|

(D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|--|----------------------|----------------------|-----------------------|--------------------------------|--|-------------------------------------|-----------------------------|--------------------------------|-------------------------------|

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| 20791 71 | Vegetable oil winter stearin..... | ...do..... | 75.3 | 44.1 | 6.0 |
| 20792 01 | Margarine..... | ...do..... | 2,125.6 | 2,231.4 | 456.5 |
| 20791 00 | Shortening and cooking oils, n.s.k., for companies with 10 employees or more. (See note.)..... | | (X) | (X) | 12.0 |
| 20791 02 | Shortening and cooking oils, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | (X) | .3 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

(X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹The Census Bureau collects and publishes detailed monthly production and other related data for cottonseed oil mill products, soybean oil mill products, vegetable oil mill products, animal and marine fats and oils, and shortening and cooking oils in Current Industrial Reports series M20J, "Fats and Oils--Oilseed Crushings," and/or M20K, "Fats and Oils--Production, Consumption, and Factory and Warehouse Stocks." Because of reporting differences by individual companies, fiscal-year reporting rather than calendar periods, etc., the data shown in this report differ from that published in the current survey. A thorough review of the data reported for coconut oil (once refined), linseed oil (raw and boiled), and linseed cake and meal indicates some companies are not reporting these data on the current report. These companies' data will be corrected in the future. For comparative purposes, the summary figures as published in the monthly current industrial reports series are shown below.

| Code | Product | Unit of measure | 1972 production as shown in-- | | Code | Product | Unit of measure | 1972 production as shown in-- | |

TABLE 6A. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1972 and 1967—Continued

(Footnotes for table 6A--Continued)

²Oil treated by alkali or caustic wash. Shipments figures exclude amounts of refined oil which have been further processed at the refining establishment by bleaching, deodorizing, and/or winterizing. Such oils are classified as shortening or cooking oils and are included in industry 2079, Shortening and Cooking Oils.

³Includes acid refined, boiled, blown, heat-treated, or chemically modified oil.

⁴Data for code 20751 31 are included with code 20751 21 to avoid disclosing figures for individual companies.

⁵Total production not available. In the census of manufactures, data are not collected for the production of refined oil from plants making soap, paint, or other inedible products where the refining was an integral part of soap or paint making process.

⁶Quantity estimated based on quantity-value relationship of other products in the product class.

⁷Production figures are from the Current Industrial Reports, "Fats and Oils--Production, Consumption, and Factory and Warehouse Stocks, Summary for 1967," series M20K (67-13), and for Current Industrial Report, "Fats and Oils, Summary for 1967," series M20J (67-13).

⁸Product code 20763 41 included in code 20763 00 to prevent disclosing figures for individual companies.

⁹Edible tallow is shown in the report for industry 2011, Meatpacking Plants.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967—Continued

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

| Product class and geographic area | Value of shipments (million dollars) | | Product class and geographic area | Value of shipments (million dollars) | |

Note: For some areas, exact figures are withheld to avoid disclosing figures for individual companies. The values are shown in ranges for those States where product-class shipments of \$1 million or more were reported. Following are the symbols and the value ranges (in million dollars) they represent:

AA.....\$1.0 to \$1.9
BB.....\$2.0 to \$4.9

CC.....\$5.0 to \$9.9
EE.....\$10.0 to \$19.9

FF.....\$20.0 to \$49.9
GG.....\$50.0 and over

(NA) Not available.

¹See text regarding an explanation of the change in SIC product class codes for 1972 and 1967.

- Represents zero. (X) Not applicable. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

EXPLANATORY TEXT

BEVERAGES

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2082—Malt Beverages

2083—Malt

2084—Wines, Brandy, and Brandy Spirits

2085—Distilled, Rectified, and Blended Liquors*

2086—Bottled and Canned Soft Drinks and Carbonated Waters*

2087—Flavoring Extracts and Flavoring Sirups, N.E.C.*

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2082.—MALT BEVERAGES

This industry comprises establishments primarily engaged in manufacturing all kinds of malt beverages. Establishments primarily engaged in bottling purchased malt beverages are classified in industry 5181 (Beer and Ale). For a detailed list of products of industry 2082, refer to table 6A, product codes 20821 14 to 20824 95.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Malt Beverages Industry in 1972 totaled \$4,054.4 million. This included ship-

ments of malt beverages (primary products) valued at \$4,029.2 million, shipments of other products (secondary products) valued at \$2.5 million, and miscellaneous receipts (mainly resales) of \$22.7 million.

Shipments of malt beverages (primary products) in 1972 represented 100 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 100 percent.

Shipments of malt beverages (primary products) from establishments classified in industry 2082 in 1972 represented 100 percent (coverage ratio) of these products valued at \$4,038.7 million shipped by all industries. In 1967, the coverage ratio was also 100 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2082, these establishments accounted for 2 percent of value of shipments.

INDUSTRY 2083.—MALT

This industry comprises establishments primarily engaged in manufacturing malt or malt byproducts from barley or other grains. For a detailed list of products of industry 2083, refer to table 6A.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Malt Industry in 1972 totaled \$226.3 million. This included shipments of malt (primary products) valued at \$211.1 million, shipments of other products (secondary products) valued at \$6.7 million, and miscellaneous receipts (mainly resales) of \$8.5 million.

Shipments of malt (primary products) in 1972 represented 97 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of malt beverages (\$5 to \$10 million).

Shipments of malt (primary products) from establishments classified in industry 2083 in 1972 represented 99 percent (coverage ratio) of these products valued at \$212.8 million shipped by all industries. In 1967, the coverage ratio was 100 percent.

*Note that the "short title" for this industry is used throughout the report.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2083, these establishments accounted for 1 percent of value of shipments.

INDUSTRY 2084.—WINES, BRANDY, AND BRANDY SPIRITS

This industry comprises establishments primarily engaged in manufacturing wines, brandy, and brandy spirits. This industry also includes bonded storerooms which are engaged in blending wines. Establishments primarily engaged in bottling purchased wines, brandy, and brandy spirits, but which do not manufacture wines and brandy, are classified in industry 5182 (Wines and Distilled Beverages). For a detailed list of products of industry 2084, refer to table 6A, product codes 20840 12 to 20840 85.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Wines, Brandy, and Brandy Spirits Industry in 1972 totaled \$865.0 million. This included shipments of wines, brandy, and brandy spirits (primary products) valued at \$815.5 million, shipments of other products (secondary products) valued at \$15.1 million, and miscellaneous receipts (mainly resales) of \$34.4 million.

Shipments of wines, brandy, and brandy spirits (primary products) in 1972 represented 98 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of flavoring extracts and sirups, n.e.c., (\$12.7 million).

Shipments of wines, brandy, and brandy spirits (primary products) from establishments classified in industry 2084 in 1972 represented 96 percent (coverage ratio) of these products valued at \$851.0 million shipped by all industries. In 1967, the coverage ratio was 94 percent. Other industries shipping wines, brandy, and brandy spirits consisted mainly of industry 2085, Distilled Liquor, Except Brandy, (\$25.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and

sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2084, these establishments accounted for 4 percent of value of shipments.

INDUSTRY 2085.—DISTILLED LIQUOR, EXCEPT BRANDY (Short Title)

This industry comprises establishments primarily engaged in manufacturing alcoholic liquors by distillation and rectification, and in manufacturing cordials and alcoholic cocktails by blending processes or by mixing liquors and other ingredients. Establishments primarily engaged in manufacturing industrial alcohol are classified in industry 2869 (Industrial Organic Chemicals, N.E.C.) and those only bottling purchased liquors in industry 5182 (Wines and Distilled Beverages). For a detailed list of products of industry 2085, refer to table 6A, product codes 20851 13 to 20853 81.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Distilled Liquor, Except Brandy, Industry in 1972 totaled \$1,797.9 million. This included shipments of distilled liquor, except brandy, (primary products) valued at \$1,542.5 million, shipments of other products (secondary products) valued at \$34.9 million, and miscellaneous receipts (mainly resales) of \$220.5 million.

Shipments of distilled liquor, except brandy, (primary products) in 1972 represented 98 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 98 percent. Secondary products shipped by this industry in 1972 consisted mainly of wines, brandy, and brandy spirits (\$25.7 million).

Shipments of distilled liquor, except brandy, (primary products) from establishments classified in industry 2085 in 1972 represented 99 percent (coverage ratio) of these products valued at \$1,557.2 million shipped by all industries. In 1967, the coverage ratio was 98 percent. Other industries shipping distilled liquor, except brandy, consisted mainly of industry 2046, Wet Corn Milling, (\$10 to \$20 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2085, these establishments accounted for 1 percent of value of shipments.

**INDUSTRY 2086.—BOTTLED AND CANNED
SOFT DRINKS (Short Title)**

This industry comprises establishments primarily engaged in manufacturing soft drinks (nonalcoholic beverages) and carbonated waters. Establishments primarily engaged in manufacturing fruit and vegetable juices are classified in SIC group 203 (Preserved Fruits and Vegetables), fruit sirups for flavoring in industry 2087, and cider in industry 2099 (Food Preparations, N.E.C.). Establishments primarily engaged in bottling natural spring waters are classified in industry 5149 (Groceries and Related Products, N.E.C.). For a detailed list of products of industry 2086, refer to table 6A, product codes 20860 01 to 20860 97.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Bottled and Canned Soft Drinks Industry in 1972 totaled \$5,486.4 million. This included shipments of bottled and canned soft drinks (primary products) valued at \$4,657.4 million, shipments of other products (secondary products) valued at \$81.1 million, and miscellaneous receipts (mainly resales) of \$747.9 million.

Shipments of bottled and canned soft drinks (primary products) in 1972 represented 98 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 98 percent. Secondary products shipped by this industry in 1972 consisted mainly of flavoring extracts and sirups, n.e.c., (\$20 to \$50 million), canned fruits and vegetables (\$10.3 million), and metal cans (\$10 to \$20 million).

Shipments of bottled and canned soft drinks (primary products) from establishments classified in industry 2086 in 1972 represented 97 percent (coverage ratio) of these products valued at \$4,807.2 million shipped by all industries. In 1967, the coverage ratio was 96 percent. Other industries shipping bottled and canned soft drinks consisted mainly of industry 2026, Fluid Milk, (\$61.3 million); industry 2087, Flavoring Extracts and Sirups, N.E.C., (\$20 to \$50 million); industry 2033, Canned Fruits and Vegetables, (\$40.4 million); and industry 2037, Frozen Fruits and Vegetables, (\$21.7 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2086, these establishments accounted for 7 percent of value of shipments.

**INDUSTRY 2087.—FLAVORING EXTRACTS AND
SIRUPS, N.E.C. (Short Title)**

This industry comprises establishments primarily engaged in manufacturing flavoring extracts, sirups, and fruit juices, not elsewhere classified, for soda fountain use or for the manufacture of soft drinks and colors for bakers' and confectioners' use. Establishments primarily engaged in manufacturing chocolate sirup are classified in industry 2066 (Chocolate and Cocoa Products) if from cacao beans and in industry 2099 (Food Preparations, N.E.C.) if from purchased chocolate. For a detailed list of products of industry 2087, refer to table 6A, product codes 20871 11 to 20874 81.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Flavoring Extracts and Sirups, N.E.C., Industry in 1972 totaled \$1,472.0 million. This included shipments of flavoring extracts and sirups, n.e.c., (primary products) valued at \$1,245.2 million, shipments of other products (secondary products) valued at \$188.7 million, and miscellaneous receipts (mainly resales) of \$38.1 million.

Shipments of flavoring extracts and sirups, n.e.c., (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 94 percent. Secondary products shipped by this industry in 1972 consisted mainly of bottled and canned soft drinks (\$20 to \$50 million); cane sugar refining (\$20 to \$50 million); and food preparations, n.e.c., (\$43.6 million).

Shipments of flavoring extracts and sirups, n.e.c., (primary products) from establishments classified in industry 2087 in 1972 represented 86 percent (coverage ratio) of these products valued at \$1,452.9 million shipped by all industries. In 1967, the coverage ratio was 85 percent. Other industries shipping flavoring extracts and sirups, n.e.c., consisted mainly of industry 2086, Bottled and Canned Soft Drinks, (\$20 to \$50 million); industry 2043, Cereal Breakfast Foods, (\$20 to \$50 million); and industry 2099, Food Preparations, N.E.C., (\$47.0 million).

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2087, these establishments accounted for 4 percent of value of shipments.

TABLE 1A. General Statistics: 1958 to 1972

(See appendix, Explanation of Terms)

| Year ¹ | Establishments | | All employees | | Production workers | | | Value added by manufacture | Cost of materials, fuels, etc. | Value of industry shipments | Capital expenditures, new | Gross value of fixed assets | End-of-year inventories | Specialization ratio | Coverage ratio |
|--|----------------|---------------------------|---------------|-------------------|--------------------|------------|-------------------|----------------------------|--------------------------------|-----------------------------|---------------------------|-----------------------------|-------------------------|----------------------|----------------|
| | Total | With 20 employees or more | Number | Payroll | Number | Man-hours | Wages | | | | | | | | |
| | (number) | (number) | (1,000) | (million dollars) | (1,000) | (millions) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (million dollars) | (percent) | (percent) |

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2082 | Industry 2083 | Industry 2084 | Industry 2085 | Industry 2086 | Industry 2087 |
|-----------|---------------|---------------|---------------|---------------|---------------|---------------|
| 1972..... | 108 | 30 | 183 | 76 | 2,273 | 350 |
| 1967..... | 125 | 32 | 175 | 70 | 3,057 | 401 |
| 1963..... | 171 | 29 | 194 | 70 | 3,569 | 492 |

(NA) Not available. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²Value of products shipped and cost of materials contain extensive duplication. The duplication occurs because the products of some establishments are used as materials by other establishments classified in the same industry.

³Figures are for value of production rather than value of shipments.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments (dollars) | Cost of materials and payrolls per dollar shipments (dollars) | Assets per dollar of shipments (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |

Notes: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those States where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹General statistics for some producing areas are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees

BB--250 to 499 employees

CC--500 to 999 employees

EE--1,000 to 2,499 employees

FF--2,500 employees and over

²Value of products shipped and cost of materials contain extensive duplication. The duplication occurs because the products of some establishments are used as materials by other establishments classified in the same industry.

³Figures are for value of production rather than value of shipments.

(See appendix. Explanation of Terms)

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies.

¹The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

²The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

³Contains extensive duplication because the products of some establishments are used as materials by other establishments classified in the same industry.

⁴Figure is for value of production rather than value of shipments.

(See appendix. Explanation of Terms)

See footnotes at end of table.

TABLE 4. General Statistics, by Employment Size of Establishment: 1972—Continued

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a Census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table to these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown for those size classes where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent
E2--20 to 29 percent

E3--30 to 39 percent
E4--40 to 49 percent

E5--50 to 59 percent
E6--60 to 69 percent

E7--70 to 79 percent
E8--80 to 89 percent

E9--90 to 99 percent
E0--100 percent

(D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹Report forms were not mailed to companies that operated only one establishment--generally single-unit companies with less than 10 employees. Payroll and sales for 1972 were obtained from administrative records supplied to other agencies of the Federal Government. These payroll and sales data were then used in conjunction with industry averages to estimate the balances of the items shown in the table. Data are also included in the respective size classes shown for this industry.

²Contains extensive duplication because the products of some establishments are used as materials by other establishments classified in the same industry.

³Figures are for value of production rather than value of shipments.

TABLE 5A. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1972

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See the appendix for

method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons; e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Establishments (number) | All employees | | Production workers | | | Value added by manufacture (million dollars) | Cost of materials (million dollars) | Value of shipments (million dollars) | Capital expenditures, new (million dollars) |
|--------------------------------|---|----------------------------|---------------|-------------------|--------------------|------------|-------------------|---|--|---|--|

(D) Withheld to avoid disclosing figures for individual companies.

¹Figures are for value of production rather than value of shipments.

TABLE 5B. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1972 and 1967

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry), and receipts for activities such as merchandising or contract work.

This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| 1972 code | Industry and census year | Value of shipments | | | | | Value of primary product shipments | | | |
|--------------|--|----------------------|----------------------|-----------------------|--------------------------------|--|-------------------------------------|-----------------------------|--------------------------------|-------------------------------|

¹Percentages are based on figures containing significant duplication.

²Figures are for value of production rather than value of shipments.

TABLE 5C. Industry-Product Analysis—Shipments by Product Class and Industry: 1972

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are

made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specified other industries are listed at the end of the table if they account for more than \$2 million of the products primary to this chapter.

| 20870 02 | Flavoring extract and flavoring sirups, n.s.k., for companies with less than 10 employees. (See note.)..... | | (X) | 22.7 | (X) | 10.5 |

Note: In the 1972 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 10 employees were estimated from administrative record data rather than collected from respondents. These shipments figures (which are further discussed in the text) are included in the code ending with "002." In both the 1972 and 1967 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product-class code (5 digits) followed by "00," or in some cases to the appropriate product-group code (4 digits) followed by "000."

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. ^r Revised.

¹Includes an undetermined amount of Canadian and light whiskey.

²Includes an estimate for the number of cases of soft drinks sold in bulk assuming 1.5 gallons equals one case.

³Includes product code 20860 41, nondietetic bottled carbonated soft drinks, all other sizes.

⁴Quantity estimated, based on quantity-value relationship for other products.

TABLE 6B. Product Classes—Value Shipped by All Manufacturing Establishments, by Geographic Area: 1972 and 1967

Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes.

Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

- Represents zero. (NA) Not available.

¹These figures are estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures and, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the Annual Survey of Manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, at the individual product-class level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

²Figures contain extensive duplication because the products of some establishments are used as materials in other establishments in the same industry.

³Figures are for value of production rather than value of shipments.

TABLE 7A. Materials Consumed, by Kind: 1972 and 1967

(See appendix, Explanation of Terms)

| 1972 code | Material | Unit of measure | 1972 | | 1967 | |

EXPLANATORY TEXT

MISCELLANEOUS FOODS AND KINDRED PRODUCTS

This report shows 1972 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

- 2091—Canned and Cured Fish and Seafoods*
- 2092—Fresh or Frozen Packaged Fish and Seafoods*
- 2095—Roasted Coffee
- 2097—Manufactured Ice
- 2098—Macaroni, Spaghetti, Vermicelli, and Noodles*
- 2099—Food Preparations, N.E.C.

The general statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect, not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5B which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

INDUSTRY 2091.—CANNED AND CURED SEAFOODS (Short Title)

This industry comprises establishments primarily engaged in cooking and canning fish, shrimp, oysters, clams, crabs, and other seafoods, including soups; and those engaged in smoking, salting, drying or otherwise curing fish for the trade. Establishments primarily engaged in shucking and packing fresh oysters in nonsealed containers, or in freezing and packaging fresh fish are classified in industry 2092. For a detailed list of products of industry 2091 refer to table 6A.

*Note that the "short title" for this industry is used throughout the report.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from 2031.

Value of production and other receipts of the Canned and Cured Seafoods Industry in 1972 totaled \$809.8 million. This included production of canned and cured seafoods (primary products), valued at \$544.7 million, production of other products (secondary products) valued at \$82.1 million, and miscellaneous receipts (mainly resales) of \$183.0 million.

Production of canned and cured seafoods (primary products) in 1972 represented 87 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was 92 percent. Secondary products produced by this industry in 1972 consisted mainly of fresh or frozen packaged fish at \$23.5 million.

Production of canned and cured seafoods (primary products) from establishments classified in industry 2091 in 1972 represented 93 percent (coverage ratio) of these products valued at \$587.7 million produced by all industries. In 1967, the coverage ratio was 95 percent. Other industries shipping canned and cured seafoods consisted mainly of industry 2032, Canned Specialties, at \$21.3 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2091, these establishments accounted for 2 percent of value of shipments.

INDUSTRY 2092.—FRESH OR FROZEN PACKAGED FISH (Short Title)

This industry comprises establishments primarily engaged in preparing fresh and raw or cooked frozen packaged fish and other seafoods, including soup. This industry also includes establishments primarily engaged in shucking and packing fresh oysters in nonsealed containers. For a detailed list of products of industry 2092, refer to table 6A, product codes 20922 13 to 20924 19.

The 1972 definition of this industry is the same as that used in the 1967 classification system. However, the SIC number has been changed from 2036.

Value of production and other receipts of the Fresh or Frozen Packaged Fish Industry in 1972 totaled \$1,061.6 million. This included production of fresh or frozen packaged fish

(primary products), valued at \$940.4 million, production of other products (secondary products) valued at \$34.2 million, and miscellaneous receipts (mainly resales) of \$87.0 million.

Production of fresh or frozen packaged fish (primary products) in 1972 represented 96 percent (specialization ratio) of the industry's total production (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products produced by this industry in 1972 consisted mainly of canned and cured seafoods at \$16.0 million.

Production of fresh or frozen packaged fish (primary products) from establishments classified in industry 2092 in 1972 represented 96 percent (coverage ratio) of these products valued at \$978.3 million produced by all industries. In 1967, the coverage ratio was 94 percent. Other industries shipping fresh or frozen packaged fish consisted mainly of industry 2091, Canned and Cured Seafoods, at \$23.5 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2092, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2095.—ROASTED COFFEE

This industry comprises establishments primarily engaged in roasting coffee and in manufacturing coffee concentrates and extracts in powdered, liquid, or frozen form, including freeze-dried. For a detailed list of products of industry 2095, refer to table 6A, product codes 20951 11 to 20952 19.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Roasted Coffee Industry in 1972 totaled \$2,328.7 million. This included shipments of roasted coffee (primary products), valued at \$2,100.1 million, shipments of other products (secondary products) valued at \$145.0 million, and miscellaneous receipts (mainly resales) of \$83.6 million.

Shipments of roasted coffee (primary products) in 1972 represented 94 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 91 percent. Secondary products shipped by this industry in 1972 consisted mainly of food preparations, n.e.c., at \$108.2 million.

Shipments of roasted coffee (primary products) from establishments classified in industry 2095 in 1972 represented 97 percent (coverage ratio) of these products valued at \$2,163.4

million shipped by all industries. In 1967, the coverage ratio was 99 percent. Other industries shipping roasted coffee consisted mainly of industry 2099, Food Preparations, N.E.C., at \$47.9 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2095, these establishments accounted for less than 1 percent of value of shipments.

INDUSTRY 2097.—MANUFACTURED ICE

This industry comprises establishments primarily engaged in manufacturing ice for sale. Ice plants operated by public utility companies are included in this industry when separate reports are available. When separate reports are not available, they are classified in SIC Major Group 49. Establishments primarily engaged in manufacturing dry ice are classified in industry 2813. For a detailed list of products of industry 2097, refer to table 6A.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Manufactured Ice Industry in 1972 totaled \$116.4 million. This included shipments of manufactured ice (primary products) valued at \$105.2 million and miscellaneous receipts (mainly resales) of \$11.2 million.

Shipments of manufactured ice (primary products) in 1972 represented 100 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 100 percent.

Shipments of manufactured ice (primary products) from establishments classified in industry 2097 in 1972 represented 99 percent (coverage ratio) of these products valued at \$105.7 million shipped by all industries. In 1967, the coverage ratio was also 99 percent.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2097, these establishments accounted for 12 percent of value of shipments.

INDUSTRY 2098.—MACARONI AND SPAGHETTI (Short Title)

This industry comprises establishments primarily engaged in manufacturing dry macaroni, spaghetti, vermicelli, and noodles. Establishments primarily engaged in manufacturing canned macaroni, spaghetti, etc., are classified in industry 2032. For a detailed list of products of industry 2098, refer to table 6A.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Macaroni and Spaghetti Industry in 1972 totaled \$349.6 million. This included shipments of macaroni and spaghetti (primary products), valued at \$323.4 million, shipments of other products (secondary products) valued at \$4.1 million, and miscellaneous receipts (mainly resales) of \$22.1 million.

Shipments of macaroni and spaghetti (primary products) in 1972 represented 99 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was 97 percent. Secondary products shipped by this industry in 1972 consisted mainly of dehydrated fruits, vegetables, and soup mixes.

Shipments of macaroni and spaghetti (primary products) from establishments classified in industry 2098 in 1972 represented 91 percent (coverage ratio) of these products valued at \$355.2 million shipped by all industries. In 1967, the coverage ratio was 98 percent. Other industries shipping macaroni and spaghetti consisted mainly of industry 2099, Food Preparations, N.E.C.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2098, these establishments accounted for 3 percent of value of shipments.

INDUSTRY 2099.—FOOD PREPARATIONS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing prepared foods and miscellaneous food specialties, not elsewhere classified, such as baking powder, yeast, and other leavening compounds; chocolate and cocoa products, except confectionery, made from purchased materials; peanut butter; packaged tea, including instant; ground spices; potato, corn, and other chips; and vinegar and cider. For a detailed list of products of industry 2099, refer to table 6A, product codes 20991 13 to 20999 94.

The 1972 definition of this industry is the same as that used in the 1967 classification system. The SIC number and title are also the same.

Value of shipments and other receipts of the Food Preparations, N.E.C., Industry in 1972 totaled \$3,647.9 million. This included shipments of food preparations, n.e.c., (primary products), valued at \$3,089.6 million, shipments of other products (secondary products) valued at \$333.7 million, and miscellaneous receipts (mainly resales) of \$224.6 million.

Shipments of food preparations, n.e.c., (primary products) in 1972 represented 90 percent (specialization ratio) of the industry's total product shipments (primary and secondary). The industry specialization ratio in 1967 was also 90 percent. Secondary products shipped by this industry in 1972 consisted mainly of roasted coffee at \$47.9 million.

Shipments of food preparations, n.e.c., (primary products) from establishments classified in industry 2099 in 1972 represented 82 percent (coverage ratio) of these products valued at \$3,762.1 million shipped by all industries. In 1967, the coverage ratio was also 82 percent. Other industries shipping food preparations, n.e.c., consisted mainly of industry 2095, Roasted Coffee, at \$108.2 million.

As stated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments (and a small number of establishments whose reports were not received at the time the data were tabulated), key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics constructed from industry averages. For industry 2099, these establishments accounted for 3 percent of value of shipments.

Note: The relationship of establishments to companies is as follows: A company, as the term is used in the census of manufactures, is a business organization consisting of one establishment or more under common ownership or control. The number of companies for each industry is shown below for the last 3 years in which censuses were conducted.

| | Industry 2091 | Industry 2092 | Industry 2095 | Industry 2097 | Industry 2098 | Industry 2099 |
|-----------|---------------|---------------|---------------|---------------|---------------|---------------|
| 1972..... | 258 | 470 | 162 | 610 | 179 | 1,856 |
| 1967..... | 268 | (NA) | 206 | 763 | 190 | 1,824 |
| 1963..... | 345 | 528 | 261 | 862 | 207 | 1,977 |

(NA) Not available. (S) Withheld because the data did not meet publication standards. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

²The 1972 definitions of these industries are the same as those used in 1967. However, the standard industrial classification numbers for industries 2091, Canned and Cured Seafoods, and 2092, Fresh or Frozen Packaged Fish, have been changed from 2031 and 2036, respectively.

³Figures relate to value of production rather than value of shipments.

TABLE 1B. Selected Operating Ratios: 1958 to 1972

(See appendix, Explanation of Terms)

| Year | Payroll per employee (dollars) | Assets per employee (dollars) | Production worker as percent of total employment (percent) | Annual man-hours of production workers (number) | Average hourly earnings of production workers (dollars) | Cost of materials per dollar of shipments or production (dollars) | Cost of materials and payrolls per dollar of shipments or production (dollars) | Assets per dollar of shipments or production (dollars) | Value added per employee (dollars) | Payrolls as percent of value added (percent) | Value added per man-hour of production worker (dollars) |
